The chiller will run all the time and the temperature control is balanced by the heater. The chiller will have unwanted cooling power at the higher temperatures, such as temperatures above -10°C; it can cause unwanted instability in the liquid temperature. To prevent this, the Orion has an automatic cooling reduction facility built in. [A BUILT- AIR-COOLED CHILLER OF SMALL CAPACITY UNIT COOLER...](#)

On some chillers its on the lower panel just below the chiller disconnect. On others its on the inside of that panel with the disconnect on it. Can you look around for the sticker or in the Orion chiller book and give us more information? I know some of the chiller alarms but I do better with a description.
