This checklist was developed as an aid for assessing a construction worksite's compliance with OSHA's 29 CFR, Part 1926, Safety and Health Regulations for Construction. This list is organized in groups of questions that follow the same nomenclature and order of the subparts of Part 1926. These questions are formulated in full sentences, closely mimicking the original text of the regulations, and each one includes its precise citation in the same regulations. This checklist touches on fundamental requirements and is not inclusive of all safety and health requirements for employers in the construction industry. However, in most situations it will not be necessary to use a safety inspection checklist as comprehensive as this one. This document is intended to be taken as a starting point to be tailored to fit the needs of specific inspections; more often by ignoring unnecessary subparts and questions. It closes with OSHA Most Frequently Cited Serious Violations Construction Industry FY 2020.

This much anticipated new edition provides employers and employees with a day-to-day guide to reducing accidents and injuries, ensuring compliance, avoiding fines and penalties, and controlling workers' compensation costs. You'll not only find comprehensive discussions on all of the construction safety regulations found in the Code of Federal Regulations (CFR) Title 29 Chapter 1926, but you'll also find the actual legal text of the regulations and overviews for each sub Chapter for easier reference. This Construction Safety Handbook covers both the obvious and the hidden dangers of construction and addresses the latest changes in OSHA standards, including new recordkeeping requirements, new ergonomic guidelines, new

requirements in the Steel Erection standard, and new additions to signs, signals, and barricades requirements. Written in plain English, this comprehensive handbook provides you with the legal background, practical advice, and ready-to-use written compliance programs you need to ensure your sites meet workplace safety requirements, protect workers, and comply with the standards. Each Chapter provides a description of the requirements of the standard, and a sample written compliance program, checklists, and the appropriate citations from the 29 CFRs. The latest changes in enforcement and inspection policy are also detailed, and a list of OSHA's most frequently cited construction standards is given.

Many standards promulgated by the Occupational Safety and Health Administration (OSHA) explicitly require the employer to train employees in the safety and health aspects of their jobs. Other OSHA standards make it the employer's responsibility to limit certain job assignments to employees who are "certified," "competent," or "qualified"—meaning that they have had special previous training, in or out of the workplace. The term "designated" personnel means selected or assigned by the employer or the employer's representative as being qualified to perform specific duties. These requirements reflect OSHA's belief that training is an essential part of every employer's safety and health program for protecting workers from injuries and illnesses. Many researchers conclude that those who are new on the job have a higher rate of accidents and injuries than more experienced workers. If ignorance of specific job hazards and of proper work practices is even partly to blame for this higher injury rate, then training will help to provide a solution. As an example of the trend in OSHA safety and health training requirements, the Process Safety Management of Highly Hazardous Chemicals standard (Title 29 Code of Federal Regulations Part 1910.119) contains several training requirements. This standard was promulgated under the requirements of the Clean Air Act Amendments of 1990. The Process Safety Management Standard requires the employer to evaluate or verify that employees comprehend the training given to them. This means that the training to be given must have established goals and objectives regarding what is to be accomplished. Subsequent to the training, an evaluation would be conducted to verify that the employees understood the subjects presented or acquired the desired skills or knowledge. If the established goals and objectives of the training program were not achieved as expected, the employer than

would revise the training program to make it more effective, or conduct more frequent refresher training or some combination of these. The requirements of the Process Safety Management Standard follow the concepts embodied in the OSHA training guidelines contained in this booklet. The length and complexity of OSHA standards may make it difficult to find all the references to training. So, to help employers, safety and health professionals, training directors, and others with a need to know, OSHA's training-related requirements have been excerpted and collected in this booklet. Requirements for posting information, warning signs, labels, and the like are excluded, as are most references to the qualifications of people assigned to test workplace conditions or equipment. It is usually a good idea for the employer to keep a record of all safety and health training. Records can provide evidence of the employer's good faith and compliance with OSHA standards. Documentation can also supply an answer to one of the first questions an accident investigator will ask: "Was the injured employee trained to do the job?" Training in the proper performance of a job is time and money well spent, and the employer might regard it as an investment rather than an expense. An effective program of safety and health training for workers can result in fewer injuries and illnesses, better morale, and lower insurance premiums, among other benefits.

What Every Supervisor Must Know About OSHA - Construction This book was designed for use by the OSHA Training Institute Education Centers as part of the curriculum for the OSHA 500 Train the Trainer program. It can be used to deliver OSHA 10 or 30 hour training as well. What Every Supervisor Must Know About OSHA provides managers, supervisors and safety personnel with tools and knowledge needed to ensure a safe and worksite. This single source book provides guidance for construction workers to ensure compliance with mandated Federal Regulations. OSHA can and does inspect companies on a regular and routine basis and levies fines for non-compliance. Accidents and OSHA penalties impact the bottom line of businesses. This book addresses how accidents affect the hidden costs of lost productivity, workers compensation expense and legal liabilities for managers. While OSHA rules and regulations are explained in this book, the emphasis is on accident prevention using

established guidelines. Steps for organizations to comply with OSHA's regulations and Safety Committees are outlined in an easy to use format. Topics are outlined that ensure compliance with Federal rules in a "how to" manner. This manual has been field tested with agencies that sought a simple, no-nonsense approach to OSHA compliance. Included in the book: An overview of OSHA, how it works, how to read the regulations, penalties Detailed guidance on compliance issues such as -FOCUS Inspections and Multi-employer worksites -Health hazards in construction -Asbestos, Lead and Bloodborne Pathogens -Hazard Communication -Personal Protective Equipment and Respirators -Permit Required Space Entry -Welding -Electrical Safety -Stairs and Ladders -Fall Protection -Scaffolding -Steel Erection -Cranes and material handling -Concrete and masonry -Fire Protection -Excavations -Hand and Power Tools -Demolition, Underground Construction and Blasting -Construction Training Requirements
