Entrepreneurial Cognition Lexington Books

Photosynthesis is one of the most important biological phenomena on earth. The conversion of sunlight by photosynthetic organisms supplies most of the energy required to develop and sustain life on the planet.

Photosynthesis is not only at the heart of plant bioenergetics, it is also fundamental to plant productivity and biomass. Photosynthetic carbon fixation and oxygen evolution - rectly intervene in many environmental, including the global atmospheric CO₂ level and global climate. Therefore, it is not surprising that a large effort is devoted to photosynthesis research. Several biochemical methods of isolation, treatment, and analysis have been developed to fulfill the needs of photosynthesis research. Photosynthesis Research Protocols contains a broad range of general and fundamental methods that are commonly used by plant biochemists, physiologists, and molecular biologists. This book is thus intended as a source of information for scientists working on any of the multiple aspects of photosynthesis, and should be of great interest to a multidisciplinary field of research involving agric-

ture, biochemistry, biotechnology, botany, cell biology, environmental sciences, forestry, plant genetics, plant molecular biology, photobiology, photophysics, photoprotection, plant physiology, plant stress, etc.

Althusser & Law is the first book specifically dedicated to the place of law in Louis Althusser's philosophy. The growing importance of Althusser's philosophy in contemporary debates on the left has - for practical and political, as well theoretical reasons - made a sustained consideration of his conception of law more necessary than ever. As a form of what Althusser called 'Ideological State Apparatuses', law is at the forefront of political struggles: from the destruction of Labour Law to the exploitation of Patent Law; from the privatisation of Public Law to the ongoing hegemony of Commercial Law; and from the discourse on Human Rights to the practice of judicial courts. Is Althusser still useful in helping us

to understand these struggles? Does he have something to teach us about how law is produced, and how it is used and misused? This collection demonstrates that Althusser's ideas about law are more important, and more contemporary, than ever. Indeed, the contributors to Althusser and Law argue that Althusser offers a new and invaluable perspective on the place of law in contemporary life.

The 16 papers in this volume constitute a summary of recent research on the geological architecture and environment of the Fraser River delta, and the physical and chemical processes operating on it. The first two papers are overviews of the geological and seismic setting of the delta. The next two papers summarize present-day sedimentary environments on the delta. A third group of papers covers the geological architecture, or lithostratigraphy, of the delta and the biological structure or biofacies of the delta. The final group of papers is concerned with natural hazards and environmental issues, including earthquakes, geotechnical stability, and seafloor sediment geochemistry.

Following the familiar, easy-to-use at a Glance format, OSCEs at a Glance 2nd Edition is both a revision guide and a comprehensive introduction to objective structured clinical examinations for medical students. Fully revised to suit the current curriculum, and written with student feedback and experiences in mind, this full-colour textbook contains brand new and comprehensively indexed chapters which include 32 new OSCE stations, covering distinct areas of specialisation as well as broader practical and communication skills covered in the exams. This new edition of OSCEs at a Glance is also supported by a

companion website at www.ataglanceseries.com/osces containing downloadable OSCE checklists - perfect for testing knowledge in the run-up to exams. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from Google Play or the MedHand Store.

A Wildlife Management Institute Book In this lavishly illustrated volume Richard E. McCabe, Bart W. O'Gara and Henry M. Reeves explore the fascinating relationship of pronghorn with people in early America, from prehistoric evidence through the Battle of Little Bighorn in 1876. The only one of fourteen pronghorn-like genera to survive the great extinction brought on by human migration into North America, the pronghorn has a long and unique history of interaction with humans on the continent, a history that until now has largely remained unwritten. With nearly 150 black-and-white photographs, 16 pages of color illustrations, plus original artwork by Daniel P. Metz, *Prairie Ghost: Pronghorn and Human Interaction in Early America* tells the intriguing story of humans and these elusive big game mammals in an informative and entertaining fashion that will appeal to historians, biologists, sportsmen and the general reader alike. Winner of the Wildlife Society's Outstanding Book Award for 2005

This book discusses the current state of cancer pathway as it is relevant to sub-Saharan Africa and highlights differences in epidemiology and the underlying problems with management. It outlines the current practice and opinions in all forms of cancer, also highlighting future prospects. Starting by providing background information on the epidemiology and genomic variations, the book then goes on to look at Infection-related cancers and continues to prostate GI, breast cancer and ovarian and cervical cancer. The last part of the book focuses on delivery

of affordable and accessible care. Palliative services and primary and transnational research, as well as clinical trials are also discussed. Written by a team of authors based in the UK, Nigeria, South Africa and the US. this book offers an overview of the current state and challenges of cancer care in sub-Saharan Africa, and it would be valuable to policy makers, researchers, funding organisations, and can be an adjunct to standard text books for students, residents and established doctors.

The Physical Chemistry of Electrolytic Solutions Springer

Nutrient recycling, habitat for plants and animals, flood control, and water supply are among the many beneficial services provided by aquatic ecosystems. In making decisions about human activities, such as draining a wetland for a housing development, it is essential to consider both the value of the development and the value of the ecosystem services that could be lost. Despite a growing recognition of the importance of ecosystem services, their value is often overlooked in environmental decision-making. This report identifies methods for assigning economic value to ecosystem services â€"even intangible ones â€"and calls for greater collaboration between ecologists and economists in such efforts.

The book provides reader with a comprehensive up-to-date overview of various aspects of soil pollutants manifestation of toxicity. The book highlights their interactions with soil constituents, their toxicity to agro-ecosystem & human health, methodologies of toxicity assessment along with remediation technologies for the polluted land by citing case studies. It gives special emphasis on scenario of soil pollution threats in developing countries and ways to counteract these in low cost ways which have so far been ignored. It also explicitly highlights the need for

soil protection policy and identifies its key considerations after analyzing basic functions of soil and the types of threats perceived. This book will be a useful resource for graduate students and researchers in the field of environmental and agricultural sciences, as well as for personnel involved in environmental impact assessment and policy making.

This open access book investigates the inter-relationship between the mind and a potential opportunity to explore the psychology of entrepreneurship. Building on recent research, this book offers a broad scope investigation of the different aspects of what goes on in the mind of the (potential) entrepreneur as he or she considers the pursuit of a potential opportunity, the creation of a new organization, and/or the selection of an entrepreneurial career. This book focuses on individuals as the level of analysis and explores the impact of the organization and the environment only inasmuch as they impact the individual's cognitions. Readers will learn why some individuals and managers are able to identify and successfully act upon opportunities in uncertain environments while others are not. This book applies a cognitive lens to understand individuals' knowledge, motivation, attention, identity, and emotions in the entrepreneurial process.

Soil Pollution - An Emerging Threat to Agriculture Springer
This volume brings together papers from geotechnical and civil engineers, biologists, ecologists and foresters. They discuss current problems in slope stability research and how to address them using ground bio- and eco-engineering techniques. Coverage presents studies by scientists and practitioners on slope instability, erosion, soil hydrology, mountain ecology, land use and restoration and how to mitigate these problems using vegetation.

Manual for Advanced Accounting Temple University Press
This book informs about knowledge gain in soil and land degradation to reduce or prevent it for meeting the mission of the Sustainable Developments Goals of the United Nations. Essence, extent, monitoring methods and implications for ecosystem functioning of main soil degradation types are characterized in overview chapters and case studies. Challenges, approaches and data towards identification of degradation in the frame of improving functionality, health and multiple ecosystem services of soil are demonstrated in the studies of international expert teams. The book consists of five parts, containing 5 – 12 single chapters each and 36 in total. Parts are explaining (I) Concepts and Indicators, (II) Soil Erosion and Compaction, (III) Soil Contamination, (IV) Soil Carbon and Fertility Monitoring and (V) Soil Survey and Mapping of Degradation The primary audience of this book are scientists of different disciplines, decision-makers, farmers and further informed people dealing with sustainable management of soil and land.

Expertise in electrolyte systems has become increasingly important in traditional CPI operations, as well as in oil/gas exploration and production. This book is the source for predicting electrolyte systems behavior, an indispensable "do-it-yourself" guide, with a blueprint for formulating predictive mathematical

electrolyte models, recommended tabular values to use in these models, and annotated bibliographies. The final chapter is a general recipe for formulating complete predictive models for electrolytes, along with a series of worked illustrative examples. It can serve as a useful research and application tool for the practicing process engineer, and as a textbook for the chemical engineering student.

Over the past two decades, there has been a major increase in research into the effects of the arts on health and well-being, alongside developments in practice and policy activities in different countries across the WHO European Region and further afield. This report synthesizes the global evidence on the role of the arts in improving health and well-being, with a specific focus on the WHO European Region. Results from over 3000 studies identified a major role for the arts in the prevention of ill health, promotion of health, and management and treatment of illness across the lifespan. The reviewed evidence included study designs such as uncontrolled pilot studies, case studies, small-scale cross-sectional surveys, nationally representative longitudinal cohort studies, community-wide ethnographies and randomized controlled trials from diverse disciplines. The beneficial impact of the arts could be furthered through acknowledging and acting on the growing evidence base; promoting arts engagement at the individual, local and national levels; and supporting cross-sectoral collaboration.
