The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of When: The Scientific Secrets of Perfect Timing Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of To Sell Is Human: The Surprising Truth About Motivating Others). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by

ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

In this enlarged and thoroughly revised third

edition of his widely used text, Darwin Reid Payne explores the principles and philosophies that shape the visual elements of theatre. Payne sets out to discover who scenographers are and to define their responsibilities. He sees scenographers as not merely craftspersons but artists with "a special vision that spans all the arts." Such artists are in a position to "extend and amplify underlying meanings of the production." The proper goal of beginning	scenographers, according to Payne, is one day to be able to approach the job as artists in full command of their craft. Payne seeks to instill in beginning scenographers a basic core of knowledge: an understanding of theatre history and the development of drama; a knowledge of art history and an understanding of periods and styles of architecture, painting, sculpture, furnishings, and costume; and a familiarity with the principles, techniques, and	materials of pictorial and three- dimensional design. This new edition contains 248 illustrations, 38 more than the second edition. Payne's goal, certainly, is to teach students what to do and how to do it; equally important, however, is Payne's view that scenographers must know why. To Payne, "Scenography is an art whose scope is nothing less than the whole world outside the theatre." Scenographers must read not only in their own field
--	--	---

but in others as well. Payne has incorporated into his text many suggestions for outside readings, quoting passages and even entire chapters from important works. Stressing research, Payne argues that without knowledge of the literature of their own and related arts, scenographers cannot grow. And that is the emphasis of this book: to present aspiring scenographers with an approach and a set of concepts that will enable them to grow. Toward that end, Payne establishes five priorities, the first of which is to develop in students what he calls "time vision," or the ability to "see" the historical past as a living place with living inhabitants. The second priority is to bring about an awareness that allows students to "see" beneath the surface of objects and events. Third, students must be helped to recognize and appreciate the difference between the "concept of space as it exists outside the theatre and the concept of space as it is used within the theatre." The fourth priority is to ingrain in students an understanding of the importance of imagery to the scenographer, and the final priority is to teach those technical skills necessary to carry out the concepts of the scenographer.

Your Career Taylor & Francis

In today's highly competitive job market a higher degree will not necessarily lead to a career in higher education. Researchers need to know how to enhance their career prospects and how to look further into the wide range of career options open to them

elsewhere. Moving On focus on the skills in Your Career shows researchers what is required to make a continuing career in academic research or lecturing and gives advice on taking alternative career paths. The authors draw on their expertise in careers guidance in higher education to outline the various options in which researchers can use the skills they have developed in university. They advise on sources of advertised and unadvertised vacancies and how to use methods such as speculative applications and the Internet. They also provide practical exercises and ideas on how to enhance essential job-search and self-presentation skills. With its special

acquired through academic research and how to use them to pursue a wide variety of career options, this book will prove invaluable for postgraduate students and researchers, as well as careers advisors responsible for students and researchers.

'The book gives a comprehensive overview of what research and the research experience encompass....This book makes an interesting read for everyone who has carried out qualitative research or is planning to do so in the future. It is well-written, and very clearly structured' - Social Research Association While each research situation is different and no book can fully prepare the researcher for what they experience - this

book provides a guide to what may be expected. Brian Roberts takes the researcher through the research process, answering the practical and subjective questions anyone will face: - entering the field and finding the right research topic - emotional and identity issues of research - overcoming writing and research 'blocks' - getting your research into reports, articles and books - reactions to research and how to handle experiences of rejection - and the questions every researcher should ask: What do I get from research, and what next? Loaded with advice on everything from organizing interpretations to coping with stress, this book is a must-read for students of all levels across the social sciences who are about to enter the research field.
