Engine rebuilding is a process that involves removing your old engine and replacing its broken parts with new one. Usually, the whole procedure will involve removing of the A/C compressor, water pump, alternator, and exhaust manifolds. The next procedure will depend on what the problem of your engine is.

[Overhaul - definition of overhaul by The Free Dictionary](#)

Engine tuning is the adjustment or modification of the internal combustion engine or Engine Control Unit to yield optimal performance and increase the engine's power output, economy, or durability.

These goals may be mutually exclusive; an engine may be de-tuned with respect to output power in exchange for better economy or longer engine life due to lessened stress on engine components. Tuning can include a wide variety of adjustments and modifications, such as the routine adjustment of the carb
