The TCGOV 2005 international conference on e-government was held at the Free University of Bozen-Bolzano during March 2 – 4, 2005. The conference was initiated by the working group

“ Towards Electronic Democracy ” (TED) of the European Science Foundation and was jointly organized by the Free University of Bozen-Bolzano, the Municipality of Bozen-

Bolzano, the TED Working Group, and the IFIP Working Group 8.5. The conference addressed a large spectrum of issues that are relevant and have to be investigated for a successful transition

from the traditional form of government to a new form known as e-government. The main focus was on the following topics: – improving citizen participation and policy making (e-democracy)

– government application integration – semantic Web technologies for e-government – security aspects for e-government services Two sessions were dedicated to e-democracy, an

emerging area within- government that seeks to enhance democratic processes and provide increased opportunities for individuals and communities to be involved in governmental

decisions. The contributions of these two sessions cover more fundamental results and insights as well as experiences from different countries. Another focus was on government application integration

and the use of - mantic Web technologies, which are important technical aspects on the agenda of e-government research. Different architectures for the integration and orch- tration of

distributed services and processes were presented along with two case studies. Three papers about Semantic Web technologies discussed the use of ontologies in e-government.

Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so

knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in

Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful

knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors

closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in

evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.

Software Development/User Interface Design A concise, fully illustrated introduction to the do's and don'ts of computer interface design Written especially for software developers, this guide will quickly teach you how

to build effective user interfaces to computer systems and applications- even if you are designing interfaces for the first time. Wilbert O. Galitz, an internationally known expert on ergonomics and graphical user interface

design, clearly explains the basic principles of interface design. He provides a step-by-step guide through the entire design process highlighted by dozens of examples of good and bad interface designs. In this valuable

guide, Galitz covers the principles of human interaction with screens-for example, how the eye reacts to colors, cascading windows, and overlay and text placement. You'll receive a clear description of each screen element

and how it can be used to create interfaces that really work from the user's perspective. You'll also find coverage of: * All of the latest interface trends, including WindowsR(r) 95 * Important human

characteristics to address during your design process * How to select the proper kinds of windows * How to develop system menus * How to select the proper screen-based controls * How to organize and lay out windows * How to

The Back of the Napkin John Wiley & Sons

What induced the British to adopt foreign coffee-drinking customs in the seventeenth century? Why did an entirely new social institution, the

coffeehouse, emerge as the primary place for consumption of this new drink? In this lively book, Brian Cowan locates the answers to these questions in

the particularly British combination of curiosity, commerce, and civil society. Cowan provides the definitive account of the origins of coffee

drinking and coffeehouse society, and in so doing he reshapes our understanding of the commercial and consumer revolutions in Britain during

the long Stuart century. Britain's virtuosi, gentlemanly patrons of the arts and sciences, were profoundly interested in things strange and exotic.

Cowan explores how such virtuosi spurred initial consumer interest in coffee and invented the social template for the first coffeehouses. As the

coffeehouse evolved, rising to take a central role in British commercial and civil society, the virtuosi were also transformed by their own

invention.

present the industry as well as state-of-the-art research. This contributed volume is divided into three parts, accommodating

different readers interested in various types of networks and applications. The first part of the book presents modeling

approaches and simulation tools mainly for the physical layer (including transmission effects, devices, subsystems, and

systems), whereas the second part features more engineering/design issues for various types of optical systems

including ULH, access, and in-building systems. The third part of the book covers networking issues related to the design of

provisioning and survivability algorithms for impairment-aware and multi-domain networks. Intended for professional scientists,

company engineers, and university researchers, the text demonstrates the effectiveness of computer-aided design when it

comes to network engineering and prototyping.
