AN ALA NOTABLE BOOK AN ILA TEACHERS CHOICE A KIRKUS REVIEWS BEST BOOK OF THE YEAR** Arthur T. Owens grabbed a brick and hurled it at the trash picker. Arthur had his reasons, and the brick hit the Junk Man in the arm, not the head. But none of that matters to the judge—he is ready to send Arthur to juvie forever. Amazingly, it’s the Junk Man himself who offers an alternative: 120 hours of community service . . . working for him. Arthur is given a rickety shopping cart and a list of the Seven Most Important Things: glass bottles, foil, cardboard, pieces of wood, lightbulbs, coffee cans, and mirrors. He can’t believe it—is he really supposed to rummage through people’s trash? But it isn’t long before Arthur realizes there’s more to the Junk Man than meets the eye, and the “trash” he’s collecting is being transformed into something more precious than anyone could imagine. . . . Inspired by the work of folk artist James Hampton, Shelley Pearsall has crafted an affecting and redemptive novel about discovering what shines within us all, even when life seems full of darkness. “A moving exploration of how there is often so much more than meets the eye.” —Booklist, starred review “There are so many things to love about this book. "Great philosophers as well as great artists have the gift of inspiring profoundly different conceptions and meaning in the individuals who contemplate their work," writes Joseph Owens. Even now, twenty-three centuries after the philosopher's death, the study of Aristotle continues to challenge us and to broaden our intellectual outlook. In this volume, John R. Catan has gathered together 18 major essays by the well-known aristotelian scholar Joseph Owens that have influenced current opinion on the philosopher. The collection represents the first well-rounded picture of Owens's interpretation of the theory of knowledge and associated cognitive problems in moral philosophy. Among the themes highlighted are: universality, cognition, matter and predication, the sciences, the soul, and nature. Included is a complete Owens bibliography, covering the years from 1946 to the present.

In this ground-breaking volume, the authors analyze the role of religion in conflict and conflict resolution. They do so from the perspectives of Judaism, Christianity, and Islam, while bringing different disciplines into play, including peace and conflict studies, religious studies, theology, and ethics. With much of current academic, political, and public attention focusing on the conflictive dimensions of religion, this book also explores the constructive resources of religion for conflict resolution and reconciliation. Analyzing the specific contributions of religious actors in this field, their potentials and possible problems connected with them, this book sheds light on the concrete contours of the oftentimes vague "religious factor" in processes of social change. Case studies in current and former settings of violent conflict such as Israel, post-genocide Rwanda, and Pakistan provide "real-life" contexts for discussion. Combining cutting-edge research with case studies and concrete implications for academics, policy makers, and practitioners, this concise and easily accessible volume helps to build bridges between these oftentimes separated spheres of engagement.

Nineteenth-century paleontologists, such as Georges Cuvier and Richard Owen, were heralded as

scientific virtuosos, sometimes even veritable wizards, capable of resurrecting the denizens of an ancient past from a mere glance at a fragmentary bone. Such extraordinary feats of predictive reasoning relied on the law of correlation, which proposed that each element of an animal corresponds mutually with each of the others, so that a carnivorous tooth must be accompanied by a certain kind of jawbone, neck, stomach, limbs and feet. 'Show Me the Bone' tells the story of the rise and fall of this famous claim.

The global financial markets turn over billions of dollars daily. An array of different instruments is available to trade in these markets, ranging from simple stocks and shares to exotic creatures such as butterfly spreads. Participation at any level involves taking a view as to which way the market in question will move. There are essentially only two methods for analysing the future direction of the markets in equities, currencies, interest rates or commodities: one involves fundamental analysis, the other technical analysis. The two camps of investment analysts are separated by a wide gulf of distrust and suspicion. This book seeks to bridge the gap between the two disciplines and show how you can benefit from both, highlighting:

- The tools you can use for mapping the markets—to understand what causes shifts in the trend and underlying forces that affect the economy and therefore the financial markets
- The long-term cyclical drivers—how economic change is triggered by technological change, and the technological changes that will drive the markets in the future
- Downward phases of the cycle—and the factors that cause them
- The markets and sectors that will prosper in the future.

As the world of investment gets ever more complicated and faster, Mapping the Markets will provide an invaluable route to improving your chances of investment success and avoiding investment distress, whether you are a long-term investor or a short-term trader.

Evaluating the writings of one of the most significant religious figures in early modern England, this volume summarizes Owen's life, explores his various intellectual, literary and political contexts, and considers his roles as a preacher, administrator, polemicist and theologian. It explores the importance of Owen, reviews the state of scholarship and suggests new avenues for research. The first part of the volume offers brand-new assessments of Owen's intellectual formation, pastoral ministry, educational reform at Oxford, political connections in the Cromwellian revolution, support of nonconformity during the Restoration, interaction with the scientific revolution and understanding of philosophy. The second part of the volume considers Owen's prolific literary output. A cross-section of well-known and frequently neglected works are reviewed and situated in their historical and theological contexts. The volume concludes by evaluating ways that Owen scholarship can benefit historians, theologians, biblical scholars, ministers and Christian readers.

Nearly thirty years after the fall of the USSR, the word "Soviet" should be as meaningless by now as "Hapsburg" or "Hohenzollern". Strangely, though, it endures, as places both inside and outside the former Soviet Union define themselves for or against what happened when it existed. But does that experience mean anything today, or is it just an enormous cul-de-sac? This book tries to find out, through an itinerary that goes from the Baltic to Belarus, from Ukraine to the Urals, from the Caucasus to Central Asia, and in cities that range from nuclear new towns of the Fifties to gleaming new capitals of the 21st century. In this Eurasian post-Soviet space, we try to

find the continuities with Communism - if there are any - and the remnants of revolutions both distant and recent. Instead of a wistful journey through ruins, this intends to be an engaged travelogue, a subjective, personal Marxist Humanist guidebook to somewhere that actually exists, but which is constantly haunted by what it didn't become, whether a real Communist utopia or a successful or fair capitalism. In the course of this transcontinental account of what used to be the Soviet Union and is now a patchwork of EU democracies, neoliberal dictatorships and Soviet nostalgic enclaves (often found in the same countries) we might just find the outlines of a way of building cities that is a powerful alternative, both in the past and present.

For years, Douglas Stuart's Old Testament Exegesis has been one of the most popular ways to learn how to perform exegesis--the science and art of interpreting biblical texts properly for understanding as well as proclamation. Completely updated and substantially expanded, this new edition includes scores of newer resources, a new configuration of the format for the exegesis process, and an entirely new section explaining where to find and how to use the latest electronic and online resources for doing biblical research. Stuart provides guidance for full exegesis as well as for a quicker approach to provide information specifically tailored to the task of preaching. A glossary of terms explains the sometimes bewildering language of biblical scholarship, and a list of frequent errors guides the student in avoiding common mistakes. No exegetical guide for the Old Testament has been more widely used in training ministers and students to be faithful, careful interpreters of Scripture.

Scientists and engineers around the world are striving to develop new sources of energy. One source, ocean thermal energy conversion, has virtually unlimited potential. It is based on techniques that exploit heat produced by solar energy that may, in turn, be used to produce fuel and electricity. This book reviews the status and background of this promising technology. William H. Avery is the leading expert in this field, and his co-author Chih Wu is an authority on heat engine performance. Together they describe the workings of an OTEC power plant and how such a system might be implemented as part of a futuristic national energy strategy. The book is the only detailed presentation of basic OTEC technology, its testing and improvement. It is based on extensive development initiatives undertaken internationally during the period from 1974 through 1985. The book offers a thorough assessment of the economics of OTEC in comparison with other energy production methods. It will be of interest to a wide range of professionals in energy research, power and mechanical engineering, and to upper-level undergraduate students taking courses in these fields.

A framework for overcoming the six types of innovation killers Everybody wants innovation—or do they? Creative People Must Be Stopped shows how individuals and organizations sabotage their own best intentions to encourage "outside the box" thinking. It shows that the antidote to this self-defeating behavior is to identify which of the six major types of constraints are hindering innovation: individual, group, organizational, industry-wide, societal, or technological. Once innovators and other leaders understand exactly which constraints are working against them and how to overcome them, they can create conditions that foster innovation instead of stopping it in its tracks. The author's model of constraints on innovation integrates insights from the vast literature on innovation with his own observations of hundreds of organizations. The book is filled with assessments, tools, and real-world examples. The author's research has been featured in the New York Times, Wall Street Journal, London Guardian and San Jose Mercury News, as well as on Fox News and on NPR's Marketplace Includes illustrative examples from leading organizations Offers a practical guide for bringing new ideas to fruition even within a previously rigid organizational culture This book gives people in organizations the conceptual framework and practical information they need to innovate successfully.
