The indigestible parts of the prey (fur, bones, feathers, claws, teeth) form a pellet in the owl's gizzard. The pellet is then regurgitated, containing the remains of what was eaten. In this virtual investigation you will dissect barn owl pellets. You will sort the bones found in the pellets and identify which type of prey the owl has eaten.

Solved: Table 4: Owl Pellet Contents Skull Jaw Scapula Rib ...

What are owl pellets? They are the regurgitated remains of an owl's meal, including all the bones of the animals it ate (usually small rodents). Owls usually swallow their food whole, digest the edible parts, and then expel the indigestible parts through their mouth as a pellet. It might sound gross, but dissecting these is a project most kids love!
