Praise for Marketing to the Social Web

"Weber understands that the world is going digital and that competitive advantage will accrue to those who understand the transformation. CEOs should heed this transformation and learn from Weber's insights how to navigate this new landscape to fully maximize their business opportunities." -Mark Fuller, Chairman, Monitor Group "Consumers are using technology to grab power from companies, the media, and the government. Marketing to the Social Web succinctly outlines how institutions can survive and win in this chaotic new world, and lays out the revised rules of engagement-ignore them at your peril." -George F. Colony, CEO, Forrester Research, Inc. "Larry has brought

pragmatic and useful recommendations to help brand builders manage the complexity of social interaction in a digital age. I was pleased to read a book that actually suggests how to do something with social networks, instead of just ponder them." -David Kenny, Chairman and Chief Executive Officer, Digitas Inc. "Where's the allure of social 2.0? Brands can talk . . . customers talk louder! Digital influence has arrived." -Jeff Taylor, CEO, Eons and Founder of Monster.com "Larry Weber provides a simple and effective roadmap of the new customer information highway. Marketing to the Social Web is a valuable tool that will give everyone the confidence and know-how to compete in this fast-growing marketplace of ideas." -Steve Harris, Vice President, Global

Communications, General Motors Corporation "As all lines and boundaries are washed away by the Web, Weber describes how to become part of the sea versus the sand." -Nicholas Negroponte, Chairman, One Laptop per Child

This comprehensive textbook
provides a broad and in-depth
overview of embedded systems
architecture for engineering
students and embedded systems
professionals. The book is well
suited for undergraduate
embedded systems courses in
electronics/electrical
engineering and engineering
technology (EET) departments in
universities and colleges, as
well as for corporate training
of employees. The book is a
readable and practical guide
covering embedded hardware,
firmware, and applications. It
clarifies all concepts with
references to current embedded

technology as it exists in the industry today, including many diagrams and applicable computer code. Among the topics covered in detail are:

- hardware components, including processors, memory, buses, and I/O
- system software, including device drivers and operating systems
- use of assembly language and high-level languages such as C and Java
- interfacing and networking
- case studies of real-world embedded designs
- applicable standards grouped by system application

Without a doubt the most accessible, comprehensive yet comprehensible book on embedded systems ever written!

This study chronicles the success of the Japanese car in America. Starting with Japan's first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late 1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the

cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.

This edited book presents the results of the 5th Workshop on Real-world Wireless Sensor Networks (REALWSN). The purpose of this workshop was to bring together researchers and practitioners working in the area of sensor networks, with focus on real-world experiments

or deployments of wireless sensor networks. Included were, nonetheless, emerging forms of sensing such as those that leverage smart phones, Internet of Things, RFIDs, and robots. Indeed, when working with real-world experiments or deployments, many new or unforeseen issues may arise: the network environment may be composed of a variety of different technologies, leading to very heterogeneous network structures; software development for large scale networks poses new types of problems; the performance of prototype networks may differ

significantly from the deployed system; whereas actual sensor network deployments may need a complex combination of autonomous and manual configuration. Furthermore, results obtained through simulation are typically not directly applicable to operational networks; it is therefore imperative for the community to produce results from experimental research. The workshop collected the state of the art in emerging and current research trends dealing with Real-world Wireless Sensor Networks, with the aim of representing a stepping stone

for future research in this field.
