Getting a Rover K-Series engine properly up and running can be a difficult task, but ultimately the result is always worthwhile. Illustrated with over 300 photographs, Rover K-Series Engine - Maintenance, Repair and Modification is a practical guide to keeping these unique engines in fine working order. The most well-known issue with the K-Series is the head gasket, and this book demonstrates how to identify common faults, before giving practical advice on how best to solve them. Step-by-step guidance on all aspects of long-term engine maintenance is provided, in addition to the improvements required to prevent further problems. A K-Series engine is then stripped down to examine its clever and interesting structure, and is rebuilt with improvements. Authors of over twenty automotive books and countless articles in assorted motoring magazines, Iain Ayre and Rob Hawkins have combined their knowledge to bring you this book on the Rover K-Series engine, which is fully illustrated with 356 colour photographs.

Driving automation and autonomy are already upon us and the problems that were predicted twenty years ago are beginning to appear. These problems include shortfalls in expected benefits, equipment unreliability, driver skill fade, and error-inducing equipment designs. Designing Interaction and Interfaces for Automated Vehicles: User-Centred Ecological Design and Testing investigates the difficult problem of how to interface drivers with automated vehicles by offering an inclusive, human-centred design process that focusses on human variability and capability in interaction with interfaces. This book introduces a novel method that combines both systems thinking and inclusive user-centred design. It models driver interaction, provides design specifications, concept designs, and the results of studies in simulators on the test track, and in road going vehicles. This book is for designers of systems interfaces, interactions, UX, Human Factors and Ergonomics researchers and practitioners involved with systems engineering and automotive academics. "In this book, Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation. They have developed an approach to designing the human-automation interaction for the handovers between the driver and the vehicle. This approach has been tested in driving simulators and, most interestingly, in real vehicles on British motorways. The approach, called User-Centred Ecological Interface Design, has been validated against driver behaviour and used to support their ongoing work on vehicle automation. I highly recommend this book for anyone interested, or involved, in designing human-automation interaction in vehicles and beyond." Professor Michael A. Regan, University of NSW Sydney, AUSTRALIA

From the popular Haynes Owners' Workshop Manual space series, which includes NASA Apollo 11 Manual and NASA Space Shuttle Manual, this unique book provides an insight into the only car ever built to be driven on the surface of another world. With a Foreword by the first Apollo astronaut to drive it on the Moon, Dave Scott, and published to coincide with the 40th anniversary of mankind's final drive on the Moon in December 2012. The book is part mechanical guide, illustrated with many of the technical drawings from the time, and part narrative-driven story of engineering ingenuity and human triumph. It draws on the rich NASA photographic archive and the complete transcripts of the crews' reaction to driving across the Moon, which the authors have an un-paralleled knowledge and experience of working with.

The Land Rover is one of the most recognised vehicles ever produced and is nothing short of a British Institution. From its humble beginnings based on an ex-World War II Jeep chassis in 1947 to a £200,000+ Range Rover in 2023, for over seven decades Land Rover has provided the 4x4s of choice for royalty, the armed forces, celebrities and the everyday family. As well as being a beloved family carrier, it has transported explorers across continents, kept farms producing, helped police nations and been instrumental in saving the lives of those lost or stranded in difficult terrain. This book pays homage to this jack-of-all-trades workhorse that was once promoted as the world's most versatile vehicle, charting the history of all the Land Rover variants manufactured, starting with the first prototype built in 1947. The smorgasbord of information covered includes conversions, both military and civilian, that have been produced both by Land Rover and by third-party companies, along with many of the prototype and concept vehicles produced over the years. There is a focus on the technical aspects of the vehicles, and the specifications of all the production variants made are detailed. The Land Rover has been used in various expeditions since the early days, and this book also covers some of the Land Rover products used for these, as well as the vehicles used for competitions such as the Camel Trophy and G4 challenges. These include those produced by Bowler, which is now owned by Jaguar Land Rover. Whether you are new to the Land Rover or a seasoned enthusiast, there will be something for you on the pages of this highly illustrated, informative book.
