Some 28 million people in America and 350 million people worldwide live with hearing loss. How do these people and their families cope? What are their experiences of pain, humor, and hope? What support do medicine and technology now offer them, and what is on the horizon? In this engaging and practical book, David Myers, who has himself suffered gradual hearing loss, explores the problems faced by the hard of hearing at home and at work and provides information on the new technology and groundbreaking surgical procedures that are available. Drawing on both his own experiences and his expertise as a social psychologist, Myers recounts how he has coped with hearing loss and how he has incorporated technological aids into his life. The family and friends of the hard of hearing also face adjustments. Myers addresses their situation and provides advice for them on how best to alert loved ones to a hearing problem, persuade them to seek assistance, and encourage them to adjust to and use hearing aids.

This volume will serve as the first Handbook of its kind in the area of hearing aid research, often the least-defined, least-understood, part of the multi-disciplinary research process. Most scientific training is very advanced within the particular disciplines but provides little opportunity for systematic introduction to the issues and obstacles that prevent effective hearing-aid related research. This area has emerged as one of critical importance, as signified by a single specialized meeting (the International Hearing Aid Conference, IHCON) that brings together specialists from the disparate disciplines involved, including both university and industry researchers. Identification of the key steps that enable high-impact basic science to ultimately result in significant clinical advances that improve patient outcome is critical. This volume will provide an overview of current key issues in hearing aid research from the perspective of many different disciplines, not only from the perspective of the key funding agencies, but also from the scientists and clinicians who are currently involved in hearing aid research. It will offer insight into the experience, current technology and future technology that can help improve hearing aids, as scientists and clinicians typically have little or no formal training over the whole range of the individual disciplines that are relevant. The selection and coverage of topics insures that it will have lasting impact, well beyond immediate, short-term, or parochial concerns.
