The proposition that there is a correlation between language and culture or culture-specific ways of thinking can be traced back to the views of Herder and von Humboldt in the late 18th and early 19th centuries. It is generally accepted today that a language, especially its lexicon, influences its speakers' cultural patterns of thought and perception in various ways, for example through a culture-specific segmentation of the extralinguistic

reality, the frequency of occurrence of particular lexical items, or the existence of keywords or key word combinations revealing core cultural values. The aim of this volume is to explore the cultural dimension of a wide range of preconstructed or semi-preconstructed word combinations in English. The 17 papers of the volume are divided into four sections, focusing on particular lexemes (e.g. enjoy and its collocates), types of word combinations (e.g. proverbs and similes), use-related varieties (such as the language of tourism or answering-machine messages), and user-related varieties (such as Aboriginal English or African English). The sections are preceded by a prologue, tracing the development of the study of formulaic language, and followed by an epilogue, which draws together the threads laid

out in the various papers. The relation between language and culture in general has been explored in a number of important works over the past ten years. However, the study of the relation between English phraseology and culture in particular has been largely neglected. This volume is the first book-length publication devoted entirely to this topic.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research

to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with

lessons that go down easy. You'll be laughing and learning at the same time.

Key successes and weakness failures are also discussed in detail.

Information about Ford's use of computer systems and an information model for the company is also included. The information model displays Ford's Work System, showing which components of the Work Organization, Control System, Industrial Relations and Human Resources Practices Ford implements. The Business Organization, with Ford's Business Strategy and Enterprise Organization is also part of the model. At the end of the report, self-evaluations by team members and references can be found. Ford Motor Company is currently trying to increase its global market share in automobile sales while facing slumping market share numbers in the United States. This report examines the Ford company characteristics and how the company uses information systems in the business climate. To reduce costs and increase knowledge of a region Ford uses small ERP systems that are less expensive and faster to implement than the larger ERP systems. Failure to obtain a larger market share in foreign markets has hurt the company. The proper use of information systems by Ford will increase their ability to maintain a successful business in future years locally and globally.

Since the mid-1990s, the emergence of a hydrogen economy and the speed with which it will arrive have been vigorously debated. As a disruptive technology, dominant designs for the production, storage and distribution of hydrogen have not yet been established. Neither have performance characteristics been achieved to compete with the existing combustion engine, though the efficiency and durability of hydrogen fuel cells are improving. This publication highlights the uncertainties involved in making choices about hydrogen and fuel cells in planning the development policies on national energy, environment and transport sector.--Publisher's description.

Luminous cars such as the 1967 L88 convertible, 1969 aluminum block ZL1, and 2015 Z06 #001 have all commanded a million dollars or more. Modern dealer-tuned cars from Lingenfelter, Calloway, and Hennessey have carried the tradition of making a great Corvette even better.
