The automobile  
industry is  
evolving rapidly  
on a worldwide  
basis.

Manufacturers  
are merging,  
component design  
and manufacture  
are now  
frequently  
outsourced  
instead of being  
created in-house,  
brands are  
changing and the  
giant auto makers  
are expanding

deeper into  
providing financial  
services to car  
buyers. The  
skyrocketing  
price of gas spurs  
developments in  
hybrid technology  
and clean diesel,  
as manufacturers  
look for ways to  
improve fuel  
efficiency.

Meanwhile, all of  
the biggest, most  
successful firms  
have become  
totally global in  
nature. Plunkett's  
Automobile  
Industry Almanac  
will be your  
complete guide to  
this immense,  
fascinating  
industry. On the  
car dealership  
side, giant,  
nationwide  
holding companies  
have acquired the  
best dealers in  
major markets.

Even the used car  
business is being  
taken over by  
national chains. E-  
commerce is  
having profound  
effects on the car  
industry.

Consumers use  
the Internet to  
become better  
informed before  
making a  
purchase. Online  
sites like  
Autobytel steer  
millions of car  
buyers toward  
specific dealers  
while the same  
sites deliver  
competing bids  
for cars,  
insurance and  
financing in a  
manner that  
lowers costs and  
improves  
satisfaction  
among  
consumers.  
Meanwhile, auto  
makers are using

raising the following questions:

(1) Do clusters really show a soft excess? (2) If so, from what spatial region(s) of the cluster does the soft excess originate? (3) Is this excess emission thermal, originating from warm-hot intergalactic gas (at 6 temperatures of  $\sim 10$  K), or non-thermal, in which

case several emission mechanisms have been proposed. Interestingly, some of the non-thermal mechanisms suggested to account for soft excess emission can also explain the hard X-ray emission detected in some clusters, for example by RXTE and BeppoSAX (also see Petrosian et al. 2008–Chap. 10, this issue;

Rephaeli et al. 2008–Chap. 5, this issue). *Popular Photography* John Wiley & Sons In this important, entertaining book, one of the world's most celebrated psychologists, Martin Seligman, asserts that happiness can be learned and cultivated, and that everyone has the power to inject real joy into their lives. 24 strengths and virtues unique to the human psyche. Each of us, it seems, has at least five of these attributes, and can build on them to identify and develop to our maximum potential. By incorporating these strengths - which include kindness, originality, humour, optimism, curiosity, enthusiasm and generosity -- into our everyday lives, he tells us, we can reach new levels of optimism, happiness and productivity.

Authentic Happiness provides a variety of tests and unique assessment tools to enable readers to discover and deploy those strengths at work, in love and in raising children. By accessing the very best in ourselves, we can improve the world around us and achieve new and lasting levels of authentic contentment and joy.

presents the current knowledge of magnetic fields in diffuse astrophysical media. Starting with an overview of 21st century instrumentation to observe astrophysical magnetic fields, the chapters cover observational techniques, origin of magnetic fields, magnetic turbulence, basic processes in magnetized fluids, the role of magnetic fields for cosmic rays, in the interstellar medium and for star formation.

Written by a group of leading experts the book represents an excellent overview of the field. Nonspecialists will find sufficient background to enter the field and be able to appreciate the state of the art.

Among them, Computer-Aided Design of electronic systems and E-Learning technologies are two areas which are different but share many concerns. The design of CAD

and E-Learning of typical CAD systems already touches on a number of parallels, such as system inter-operability, user interfaces, standardization, EML-based formats, reusability aspects (of content or designs), and intellectual property rights. Furthermore, the teaching of Design Automation tools and methods is particularly amenable to a distant or blended learning setting, and implies the interconnection

of tools, such as simulators or synthesis tools, with e-learning tools.
