Designed as one of the first true textbooks on how to use the UNIX operating system and suitable for a wide variety of UNIX-based courses, UNIX and Shell Programming goes beyond providing a reference of commands to offer a guide to basic commands and shell programming. Forouzan/Gilberg begin by introducing students to basic commands and tools of the powerful UNIX operating system. The authors then present simple scriptwriting concepts, and cover all material required for understanding shells (e.g., Regular Expressions, grep, sed, and awk) before introducing material on the Korn, C, and Bourne shells. Throughout, in-text learning aids encourage active learning and rich visuals support concept presentation. For example, sessions use color so students can easily distinguish user input from computer output. In addition, illustrative figures help student visualize what the command is doing. Each chapter concludes with problems, including lab sessions where students work on the computer and complete sessions step-by-step. This approach has proven to be successful when teaching this material in the classroom.

The macular carotenoids play key roles in eye health and retinal disease. Age-related macular degeneration (AMD), the most common cause of acquired blindness in much of the world, is associated with low levels of macular pigment. Macular pigment is also essential for enhancing visual performance by reducing glare disability and improving photostress recovery. Carotenoids and Retinal Disease presents an up-to-date, thorough volume devoted to the chemistry, pathobiology, visual science, and medical and public health significance of the macular carotenoids. With contributions from an international group of leading experts, this book covers a range of topics, from macular anatomy to clinical trials. It begins with a chapter tracing the discovery of macular pigment through the more recent functional recognition of carotenoids. The text covers AMD risk factors, epidemiology, pathogenesis, and classifications. It reviews evidence from epidemiological studies of relationships between AMD and the carotenoids lutein, zeaxanthin, and meso-zeaxanthin, as well as evidence from clinical trials on the effects of macular carotenoid supplementation in subjects with AMD and normal subjects. The book explores the use of molecular genetics in studying macular pigment and AMD pathogenesis; bioavailability of macular pigment; functions of lutein, zeaxanthin, and meso-zeaxanthin; and the identification of macular carotenoid binding proteins involved in pigment

uptake and transport. It also covers xanthophyll-membrane interactions, and the macular carotenoids in human serum and their capacity to protect against AMD. Further, the implications of light distribution on the retina for AMD are discussed. Advancing our understanding of how the macular carotenoids enhance vision and prevent vision loss, this book provides a valuable reference for researchers and clinicians involved in the treatment and prevention of retinal disease.

It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys’ killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.
