Metal Fabricator's Handbook

Robert Hale

Excerpt from Handcraft in Wood and Metal: A Handbook of Training in Their Practical Working for Teachers, Students, & Craftsmen In preparing this work the authors have endeavoured to show the possibilities of craftwork as an educational subject, and to briefly indicate its cultural aspects. One of the prejudices against handcraft or so-called "manual work" has been that it had more value from a physical than an educational or cultural standpoint, with the result that "handcraft" in schools has too frequently been classed as "carpentry", The authors think that

lessons based upon the historical phases of craftwork, particularly in the development of types of construction in furniture and metalwork, and the growth of tools from prehistoric times, together with the study of simple applied art as displayed in historic work, will do much to increase the value of handcraft in schools. Whilst the work has been prepared primarily for the teacher, the aim has been to render treatment of the subject such as to make the work of value and interest to the craftsman, and a useful guide for the pupil or student. As an aid to class teachers in helping on a technical side in central schools, they hope it will find a place among the books pertaining to craft and general education. It is hoped further that the work will be regarded as a collection of suggestions and data, rather than an attempt to produce a series of models. The authors believe that at least one aspect of handcraft has been almost entirely

neglected in the past, i.e. the artistic side; and, whilst not claiming any special merit for the design of the models dealt with, they have endeavoured to embody some artistic merit in the designs, and have tabooed the meaningless joints and collection of joints which have only a limited mechanical value. This vintage book contains a comprehensive guide to forging and blacksmithing, originally intended to be used by teachers of industrial arts. It was written by a master craftsman in wrought metal and contains a wealth of useful tips and simple instructions for making a variety of objects and tools. This volume will be of considerable

utility to novice metalworkers and would make for a worthy addition to collections of allied literature.

Contents include: "The Forge", "Electric Weld", "Scarfig", "Upsetting", "Corner Weld", "Brazing", "Fagot Weld", "Staples", "Open Links", "Welded Chain Lines", "Bolts", "Cupping Tools", "Gate Hook", "Making Tongs", "Pig Iron", "Puddling", "The Open Hearth Process", "Crucible Steel", "Making a Flat Cold Chisel", et cetera. Many vintage books such as this are increasingly scarce and expensive. We are republishing this volume now in an affordable, modern edition complete with a specially commissioned new introduction on metal work.
