Vince --_ . _----- 1 Introduction The US President's Information Technology Advisory Committee (PITAC) recently advised the US Senate of the strategic importance of investing in IT for the 21st century, particularly in the areas of software, human-computer interaction, scalable information infrastructure, high-end computing and socioeconomic issues [1]. Research frontiers of human-computer interaction include the desire that interaction be more centered around human needs and capabilities, and that the human environment be considered in virtual environments and in other contextual information-processing activities. The overall goal is to make users more effective in their information or communication tasks by reducing learning times, speeding performance, lowering error rates, facilitating retention and increasing subjective satisfaction. Improved designs can dramatically increase effectiveness for users, who range from novices to experts and who have diverse cultures with varying educational backgrounds. Their lives could be made more satisfying, their work safer, their learning easier and their health better.

When Thomas Edison began wiring New York City with a direct current electricity distribution system in the 1880s, he gave humankind the magic of electric light, heat, and power; in the process, though, he inadvertently opened a Pandora ’ s Box of unimaginable illness and death. *Dirty Electricity* tells the story of Dr. Samuel Milham, the scientist who first alerted the world about the frightening link between occupational exposure to electromagnetic fields and human disease. Milham takes readers through his early years and education, following the twisting path that led to his discovery that most of the twentieth century diseases of civilization, including cancer, cardiovascular disease, diabetes, and suicide, are caused by electromagnetic field exposure. In the second edition, he explains how electrical exposure does its damage, and how electricity is causing our current epidemics of asthma, diabetes and obesity. Dr. Milham warns that because of the recent proliferation of radio frequency radiation from cell phones and towers, terrestrial antennas, Wi-Fi and Wi-max systems, broadband internet over power lines, and personal electronic equipment, we may be facing a looming epidemic of morbidity and mortality. In *Dirty Electricity*, he reveals the steps we must take, personally and as a society, to coexist with this marvelous but dangerous technology.
