Babe Ruth is still regarded as perhaps the greatest baseball player ever to step on a diamond. Born into a poor family in Baltimore, George Herman Ruth Jr. was sent to a Catholic reform school at age seven, where he learned how to play baseball. Initially a talented southpaw, the Babe went on to shatter every home-run record on the books and when fewer games were played in a season and a heavier ball was used. In this engaging and fast-paced biography, award-winning author Wilborn Hampton shares with readers The Babe was also a man of big heart, temper, and appetite.

The prevalence of anorectal disorders in the general population is probably much higher than that seen in clinical practice. Anorectal diseases have for a long time been considered of little interest, with their treatment considered of little prestige despite the social impact they cause to patients. Proctology was initiated late and developed slowly over the years. However, in the last 20 years, a renewed interest has begun, and today, we can say that proctology is a specialized branch of general surgery. This book "Proctological Diseases in Surgical Practice" provides a practical introduction to proctology, with a particular attention to the topics that have not yet been investigated. This book may be useful for the general physician as well as for the specialist.

The text of Ovid's Metamorphoses is not as indisputably established as one might think. Many passages are still obscure or plainly corrupt. 550 manuscripts, 500 editions and reprints, as well as countless critical notes and works must be taken into account when trying to establish the most reliable text for new generations of readers. This volume provides a detailed line-by-line analysis of Book XIII and offers thereby an indispensable starting point for a new critical edition not only of this but also of other parts of the poem.

Fibre metal laminates were developed at Delft University of Technology in The Netherlands, from the beginning of the 1980s. This is a new family of hybrid materials consisting of thin metal layers bonded together by fibres embedded in an adhesive. As a result of this build-up, fibre metal laminates possess a mixture of the characteristics of both metals and composite materials. Initial development led to the 'Arall' variant using aramid fibres, which was first applied on the C-17 military transport aircraft around 1990. Large-scale application became possible with a variant using glass fibres, dubbed 'Glare', which was selected for the Airbus A380 super jumbo in 2001. This is the first book to discuss these new materials and it deals mostly with Glare. It covers most of the relevant aspects of the materials, from static mechanical properties, fatigue and impact to design, production and maintenance of aircraft structures. This book contains the basic information on these new materials necessary for engineers and aircraft operators alike.

Readers coming to the Odyssey for the first time are often dazzled and bewildered by the wealth of material it contains which is seemingly unrelated to the central story: the main plot of Odysseus' return to Ithaca is complicated by myriad secondary narratives related by the poet and his characters,

including Odysseus' own fantastic tales of Lotus Eaters, Sirens, and cannibal giants. Although these 'para-narratives' are a source of pleasure and entertainment in their own right, each also has a special relevance to its immediate context, elucidating Odysseus' predicament and also subtly influencing and guiding the audience's reception of the main story. By exploring variations on the basic story-shape, drawing on familiar tales, anecdotes, and mythology, or inserting analogous situations, they create illuminating parallels to the main narrative and prompt specific responses in readers or listeners. This is the case even when details are suppressed or altered, as the audience may still experience the reverberations of the better-known version of the tradition, and it also applies to the characters themselves, who are often provided with a model of action for imitation or avoidance in their immediate contexts.

- A hypothesis is a proposition, set forth as an explanation for the occurrence of a phenomenon, that can be tested. - The basis for scientific investigation is the collection of information to formulate and test hypotheses. - Experimental methods measure the effect of manipulations caused by the investigator; observational methods collect information about naturally occurring events. - There are three sub-types of experimental techniques that differ in the way subjects are chosen for inclusion in the study, in the amount of control that the investigator has over variables, and in the method used to assess changes in other variables. - Descriptive observational studies dominate the early phase of most investigations and involve the description of disease-related events in the population. Associations among factors may be observed but the strength of the associations is not measured. - Analytical observation al techniques are of three basic types: prevalence surveys, case:control studies, and incidence or cohort studies. All attempt to explain the nature of relationships among various factors and to measure the strength of associations. - Prevalence surveys and case:control studies deal with disease existing at the time of the study; incidence studies are concerned with the development of disease over time. - Observational studies may be retrospective, using existing data, or prospective with collection of new information.

The important theme "What is Sports Law?" was the topic of the international Conference on "The Concept of Lex Sportiva Revisited", which took place in Jakarta in late 2010. Academics and practitioners are still in debate to agree on this concept as is evident in this book. This book not only contains the worked out contributions of this Conference, but also other related chapters on the subject. It produces a reassessment of the content of Sports Law and its terminology keeping a close eye on the current literature. The book appears in the ASSER International Sports Law Series, under the editorship of Prof. Dr. Robert Siekmann, Dr. Janwillem Soek and Marco van der Harst LL.M.
