Designed by Mikhail Kalashnikov for the Soviet military, the Pulemyot Kalashnikova (PK) was introduced in the early 1960s as a replacement for the SGM and RPD machine guns. The general-purpose 7.62mm Kalashnikov -- PK, PKS (on a tripod), PKB (armored transporters), PKT

(tank), PKM (modernized) -- is a powerful automatic weapon intended to defeat enemy personnel and weapons systems. The Soviet Ministry of Defense published this instruction manual for the use and maintenance of the PK in 1987, and this is the first time an English translation has been made available to the general public. The translation is very timely because U.S. military personnel in both Iraq and Afghanistan are facing this machine gun in the hands of insurgents. At the same time, U.S. instructors are training Iraqi and Afghan soldiers in the employment of the PK, and this manual will be a valuable tool for them to use in their instruction.

This manual provides operation and maintenance instructions for the M16A2, M16A3, M16A4 Rifles, M4 and M4A1 Carbines. These weapons are lightweight, gas-operated, air-cooled, magazine-fed. shoulder-fired weapons that can be fired in either automatic, three-round bursts, or semiautomatic. The purpose of the weapons is to provide personnel an offensive/defensive capability to engage targets in the field. The adapter rails allows the operator the capability to mount various accessories on to the M16A4 Rifle and the M4/M4A1 Carbines. When a procedure is common to M16 rifle and M4 Carbine, ONLY the M16A2 configuration will be depicted. If a procedure is not common to both -weapons, the procedure will be incorporated and the weapon will be identified. If your weapon is configured with adapter rails, refer to the appropriate appendices in this manual for operation and maintenance procedures for the adapter rails.
