This book analyzes the role that human forms play in visualizing practical information and in making that information understandable, accessible, inviting, and meaningful to readers—in short, "humanizing" it. Although human figures have long been deployed in practical communication, their uses in this context have received little systematic analysis. Drawing on rhetorical theory, art history, design studies, and historical and contemporary examples, the book explores the many rhetorical purposes that human forms play in functional pictures, including empowering readers, narrating processes, invoking social and

cultural identities, fostering pathos appeals, and visualizing data.

The book is aimed at scholars, teachers, and practitioners in business, technical, and professional communication as well as an interdisciplinary audience in rhetoric, art and design, journalism, engineering, marketing, science, and history.

Listen to a short interview with Giles Slade Host: Chris Gondek | Producer: Heron & Crane If you've replaced a computer lately--or a cell phone, a camera, a television--chances are, the old one still worked. And chances are even greater that the latest model won't last as long as the one it replaced. Welcome to the world of planned obsolescence--a business model, a way of life, and a uniquely American invention that this eye-opening book explores from its beginnings to its perilous implications for the very near future. Made to Break is a history of twentieth-century technology as seen through the prism of obsolescence. America invented everything that is now disposable, Giles Slade tells us, and he explains how disposability was in fact a necessary condition for America's rejection of tradition and our acceptance of change and impermanence. His book shows us the ideas behind obsolescence at work in such American milestones as the inventions of branding, packaging, and advertising; the contest for market dominance between GM and Ford; the struggle for a national communications network, the development of electronic technologies--and with it the avalanche of electronic consumer waste that will overwhelm America's landfills and poison its water within the coming decade. History reserves a privileged place for those societies that built things to last--forever, if possible. What place will it hold for a society addicted to consumption--a whole culture made to break? This book gives us a detailed and harrowing picture of how, by choosing to support ever-shorter product lives we may well be shortening the future of our way of life as well.
