The fundamental mathematical tools

needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For

those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

This book addresses one of the most critical issues facing global business leaders and the multicultural workforce — how to work and relate effectively in the intercultural contexts. The author presents business professionals, practitioners and academics with the Collaborative Intercultural Competence Model. Based on solid theoretical assumptions and real intercultural experiences, this model is to help professionals work more effectively across and within cultures. This book expands

the traditional presentation of existing knowledge by providing a unified discussion of intercultural communication and its conceptual foundations. The book offers readers with a contemporary insight into the intercultural competence phenomenon and highlights the basis for its experience-based inquiry, assessment and development. A distinctive feature of Intercultural Competence in Organizations is its comprehensive coverage of the intercultural competence framework from both communication and organizational behavior perspectives. This book does not cover traditional areas of international business, international management, global management strategy and policy and cross-cultural comparative management, but focuses on theoretical foundations of intercultural competence and intercultural competence research and practice. The author describes the complex nature of intercultural competence in a straightforward format which helps professionals, practitioners and students to envision a variety of intercultural situations in which they may behave competently. Thus, the conceptual acumen of this title is to understand the premises of intercultural competence, embrace its theoretical assumptions, see its practical applicability, and advance individual intercultural competence. Featuring examples

and skill development exercises, this book will be appealing to professionals, practitioners, students, academics and policy makers in the field of international business, management and communication. “ Dr. Matveev challenges his readers to develop their intercultural competence so as to make themselves more effective, more humane and more socially skilled in a world that increasingly involves extensive contact across various groups of people. ” --from the Foreword by Richard W. Brislin, University of Hawaii “ Dr. Matveev creates an awareness of intercultural competence by exposing the reader to the theoretical concepts and practical tools. Business people and academics will use this book to recognize and leverage the benefits of cultural diversity. ” --Berthold Mukuahima, Director of Human Capital, Ohlthaver & List Group, Namibia “ Dr. Matveev reveals how intercultural competence of professional multicultural teams helps in achieving corporate competitive advantage and longevity in a challenging globalized world. This book is very useful for managers, scholars and students who want to elevate the efficacy of intercultural relationship in their professional and personal lives. ” --Sre ko ebron, Management Board Member, Sava Reinsurance Company, Slovenia /div

This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some

acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.
