If you do not yet scuba dive but are thinking of learning, then Scuba Fundamental - Start Diving the Right Way is for you. It takes you from the germ of the idea that you might like to try scuba diving up to the point where you have done around 20 dives. This is not your standard how-to scuba diving manual. It is very different. The purpose of Scuba Fundamental is not to teach you how to dive. A dive instructor will do that. But this book will make the learning process much easier. It will help you make the right choices and avoid the pitfalls that await new and uninformed divers coming into the sport. It will also set you well on the road to becoming a capable and competent lifelong diver. Scuba Fundamental tells you how to make sure you are prepared for a scuba diving course and what a good beginners course should entail. It tells you how

to choose a good instructor, how to decide which operators to dive with after you have finished your course and what sort of dives you should be doing when you first start diving. You will learn the many ways in which diving will change your life and also acquire some extremely valuable advice on the etiquette involved in the sport. Throughout the book and especially in the chapter "It Happened to Me" you will be entertained, educated and encouraged by anecdotes from people who are now experienced divers but were once beginners too. There is also an entire section devoted to diving safety, much of which covers vitally important aspects of scuba diving that standard training manuals don't emphasise enough or even leave out completely. The book's message is: start scuba diving the right way and you will be relaxed and ready for the adventure. You will have more fun, make fewer mistakes and be confident in the fact that you are well informed, have made the best choices and have spent your money wisely. Scuba Fundamental is a unique, reliable and essential guide: one that you can trust completely and follow during this formative phase of your scuba diving life. "I wish I had had this book to read when I learned to dive. I remember being totally confused." Robin Yao, Executive Editor, EZDIVE magazine "This is the book divers should give to friends when they say they want to learn to scuba dive."

Dolphin culture evolved over millions of years so they could remain perfectly attuned with their world, the ocean. But the growing pressure of man's activities become intolerable and in frustration they seek an aggressive new path, making a shocking departure from the ancient philosophy that has guided them so well through the millennia.

Diving tourism has seen such growth in the past decade that the World Tourism Organization suggests it will soon become as important as ski tourism. According to a WTO estimate, there are now 5-7 million active certified divers in the world. Despite its development as a mass tourism activity, its dynamic growth and great economic importance, particularly for island destinations in the tropics, surprisingly few scientific publications address this form of special-interest tourism. In the light of this, "New Frontiers in Marine Tourism" is the first attempt to describe and analyse this tourism sector comprehensively. The first part of the book is devoted to an overview of the dive sector, addressing different types of diving locations and their particular characteristics, the geographical distribution of dive locations, the origins of dive tourists, as well as the growth and economic significance of diving tourism in destinations worldwide. In its second section, the book outlines different motivations and typologies of diving tourists, their learning behaviour, knowledge of marine environments, and their interaction with flora and fauna. The third section focuses on diver satisfaction, attitudes and preferences, diver education and interpretation, compliance with regulations by divers and tour operators, environmental impacts, and aspects of risk and health, thus highlighting a variety of pressing topics related to the management of diving tourism. * First book

of its kind to address the rapidly growing area of diving tourism * Contributions from academic experts in the field, it addresses hot issues such as environmental impacts, health and safety, education, and economic factors and impacts. * Brilliantly edited, it represents a coherent and cohesive collection of critically important issues in this area.

A wheel turns because of its encounter with the surface of the road; spinning in the air it goes nowhere. Rubbing two sticks together produces heat and light; one stick alone is just a stick. In both cases, it is friction that produces movement, action, effect. Challenging the widespread view that globalization invariably signifies a "clash" of cultures, anthropologist Anna Tsing here develops friction in its place as a metaphor for the diverse and conflicting social interactions that make up our contemporary world. She focuses on one particular "zone of awkward engagement"--the rainforests of Indonesia--where in the 1980s and the 1990s capitalist interests increasingly reshaped the landscape not so much through corporate design as through awkward chains of legal and illegal entrepreneurs that wrested the land from previous claimants, creating resources for distant markets. In response, environmental movements arose to defend the rainforests and the communities of people who live in them. Not confined to a village, a province, or a nation, the social drama of the Indonesian rainforest includes local and national environmentalists, international science, North

American investors, advocates for Brazilian rubber tappers, UN funding agencies, mountaineers, village elders, and urban students, among others--all combining in unpredictable, messy misunderstandings, but misunderstandings that sometimes work out. Providing a portfolio of methods to study global interconnections, Tsing shows how curious and creative cultural differences are in the grip of worldly encounter, and how much is overlooked in contemporary theories of the global.

Finch chronicles the harrowing true story of two friends who plunge 900 feet into the water in South Africa--and only one returns. What happened that day is the stuff of nightmarish drama, but it's also a compelling human story of friendship and of coming to terms with loss and tragedy. 8-page color photo insert.

'One of the best accounts ever written of deep-water diving and its staggering, haunting dangers' Robert Kurson, New York Times bestselling author of *Shadow Divers* Deep underwater lurks a mysterious man-made illness. It has gone by many names over the years – Satan's disease, diver's palsy, the chokes – but today, medics call it decompression sickness. You know it as the bends. That's the devil British diver Martin Robson faces each time he plunges beneath the surface. In the winter of 2012, Robson was part of an expedition to Blue Lake, southern Russia, which sought to find a submerged cave system never seen by the human eye. On the final day of the expedition, as Robson returned from diving deeper into the lake than anyone had before, disaster struck: just seventy-five feet down, he was ambushed by the bends. Robson knew that if he continued up to the surface he would probably die before help arrived. Instead, he sank back into the water, gambling on an underwater practice most doctors believe is a suicidal act. Soon the only hope he had of saving his life would rest in the hands of a dramatic mercy mission organised at the highest levels of the Russian government. *Between the Devil and the Deep* is the first book to tell the terrifying true story of what it feels like to get the bends, taking you inside the body and mind of a man who suffered the unthinkable. Writer Mark Cowan also explores the grimly fascinating history of

decompression sickness, the science behind what causes the disease, and the stories of the forgotten divers who pushed the limits of physical endurance to help find a solution.

A decompression procedure for repetitive diving to depths of 190 feet was devised employing modified Haldane principles which have been reported previously. The repetitive diving tables provide a system by which a diver can determine the necessary increase in decompression time on the second and successive dives, based on the amount of excess inert gas tension in his body after completion of the previous dive. The amount by which the decompression time must be increased varies inversely with the time (on surface) interval between dives. The information for using this system is obtained from four tables i.e. Decompression Table, No Decompression Table, Surface Interval Table and the Repetitive Dive Table. The validity of this procedure was tested by performing 62 repetitive dives with random combinations of depth, time and surface interval

The Golden Chersonese and the Way Thither Amanda Symonds Building on his first book, "SCUBA: A Practical Guide for the New Diver", James Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance. Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that

you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.

This book provides an overview of beach management tools, including carrying capacity, beach nourishment, environmental and tourism awards (like Blue Flag or others), bathing water quality, zoning, beach typologies, quality index, user's perception, interdisciplinary beach monitoring, coastal legislation, shore protection, social and economic indicators, ecosystem services, and coastal governance (applied in beach case studies). Beaches are one of the most intensely used coastal ecosystems and are responsible for more than half of all global tourism revenues, and as such the book introduces a wide range of state-of-the-art tools that can be used to deal with a variety of beach challenges. Each chapter features specific types of tools that can be applied to advantage in beach management practices. With examples of local and regional case studies from around the globe, this is a valuable resource for anyone involved in beach management.
