Why do underdogs succeed so much more than we expect? How do the weak outsmart the strong? In David and Goliath Malcolm Gladwell, no.1 bestselling author of The Tipping Point, Blink, Outliers and What the Dog Saw, takes us on a scintillating and surprising journey through the hidden dynamics that shape the balance of power between the small and the mighty. From the conflicts in Northern Ireland, through the tactics of civil rights leaders and the problem of privilege, Gladwell demonstrates how we misunderstand the true meaning of advantage and disadvantage. When does a traumatic childhood work in someone's favour? How can a disability leave someone better off? And do you really want your child to go to the best school he or she can get into? David and Goliath draws on the stories of remarkable underdogs, history, science, psychology and on Malcolm Gladwell's unparalleled ability to make the connections others miss. It's a brilliant, illuminating book that overturns conventional thinking about power and advantage. 'A global phenomenon... there is, it seems, no subject over which he cannot scatter some magic dust' Observer

Wherever you live, chances are there are a few things about your home you'd like to change. As best-selling author and television host Debbie Travis points out in her introduction, "Decorating is an ongoing process. Each time you change your address, or even if you stay in the same place, the process of adapting your home to suit your changing moods and needs is constant, because, in truth, no room is perfect." But often we look around at a new home with large expanses of white walls, or someone else's color scheme, or an apartment that hasn't been painted in years, and we simply don't know where to start. In Debbie Travis' *Decorating Solutions*, Travis has gathered together her best ideas for solving the most common decorating dilemmas plaguing homeowners and renters alike. The book begins with a valuable outline of the proper steps for preparing a variety of surfaces and gives a complete rundown on paints, glazes, plaster, sealants, and materials, including helpful descriptions of different tools and basic instructions on stenciling, block painting, and plastering. Next, because working with color can be intimidating at first, a section on color will help you choose the right one for your needs. Then, taking the commonsense approach of accentuating the positive and camouflaging the negative, Travis offers imaginative solutions to problems ranging from cracked walls to damaged floors, from outdated kitchen cabinetry to dreary bathroom tiles. Included are ideas and complete step-by-step instructions for more than 65 different paint, plaster, and paper finishes for transforming walls, floors, ceilings, doors, fireplaces, bathrooms, kitchens, hallways, and staircases, all without the fuss of major renovation. Lavishly illustrated with more than 400 full-color photographs and packed with practical information, Debbie Travis' *Decorating Solutions* is an inspiration for anyone who wants to bring out the best in a home. "From the Hardcover edition.

Family Life

A groundbreaking treatise by one of the great mathematicians of our time, who argues that highly effective thinking can be learned. What spurs on and inspires a great idea? Can we train ourselves to think in a way that will enable world-changing understandings and insights to emerge? Richard Hamming said we can, and first inspired a generation of engineers, scientists, and researchers in 1986 with "You and Your Research," an electrifying sermon on why some scientists do great work, why most don't, why he did, and why you should, too. *The Art of Doing Science and Engineering* is the full expression of what

"You and Your Research" outlined. It's a book about thinking; more specifically, a style of thinking by which great ideas are conceived. The book is filled with stories of great people performing mighty deeds—but they are not meant to simply be admired. Instead, they are to be aspired to, learned from, and surpassed. Hamming consistently returns to Shannon's information theory, Einstein's relativity, Grace Hopper's work on high-level programming, Kaiser's work on digital fillers, and his own error-correcting codes. He also recounts a number of his spectacular failures as clear examples of what to avoid. Originally published in 1996 and adapted from a course that Hamming taught at the U.S. Naval Postgraduate School, this edition includes an all-new foreword by designer, engineer, and founder of Dynamiland Bret Victor, and more than 70 redrawn graphs and charts. The Art of Doing Science and Engineering is a reminder that a childlike capacity for learning and creativity are accessible to everyone. Hamming was as much a teacher as a scientist, and having spent a lifetime forming and confirming a theory of great people, he prepares the next generation for even greater greatness.
