IQ and genius are often muddled up, with one being mistaken for the other. However, various theories suggest that there may be seven key types of intelligence. This book examines several of the world's greatest historical geniuses, concentrating on the common threads between their lives to find insights into the way genius is formed.

1Bimal D. Theophilus and Ralph Rapley provide biological and clinical investigators with a comprehensive collection of new, recent, and updated PCR-based screening methods suitable for detecting the presence of both known and novel mutations. The methods cover point mutations (e.g., ASO-PCR, SSCP, DGGE, chemical cleavage), deletions (multiplex PCR, FISH, blotting), non-sense mutations (PTT), and more. The new and exciting techniques of DNA array analysis, along with such recently developed experimental methods as conformation-sensitive gel electrophoresis, are also included. Each chapter explains the basic theory behind the technique and provides valuable notes essential for its successful execution.

Political dignitaries including the President of the Federation gather for a ceremony onboard Mausoleum 2069. But when a cloud of interstellar dust passes through the galaxy and eclipses Earth, the tenants within the walls of Mausoleum 2069 are reborn and the undead begin to rise. As the struggle between life and death onboard the mausoleum develops, Eriq Wyman, a one-time member of a Special ops team called the Force Elite, is given the task to lead the President to the safety of Earth. But is Earth like Mausoleum 2069? A landscape of the living dead? Has the war of the Apocalypse finally begun? With so many questions there is only one certainty: in space there is nowhere to run and nowhere to hide.

This volume focuses and describes tools, assays, and techniques used to enhance the understanding of the role of auxins and cytokinins. The chapters in this book cover topics such as: microbial manipulation of auxin and cytokinins in plants; interplay between auxin and cytokinin and its impact on MAPK; H<sub>2</sub>O<sub>2</sub> production in Arabidopsis leaves; crosstalk between jasmonate and auxin in plant stress responses of roots; and high-throughput protoplast trans-activation (PTA) screening. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and comprehensive, Auxins and Cytokinins in Plant Biology: Methods and Protocols is a valuable resource to plant scientists, graduate and under graduate students in addressing their biological questions relevant to the functional implications of auxin and cytokinins.

In Fluorescent Protein-Based Biosensors: Methods and Protocols, experts in the field have assembled a series of protocols describing several methods in which fluorescent protein-based reporters can be used to gain unique insights into the regulation of cellular signal transduction. Genetically encodable fluorescent biosensors have allowed researchers to observe biochemical processes within the endogenous cellular environment with unprecedented spatiotemporal resolution. As the number and diversity of available biosensors grows, it is increasingly important to equip researchers with an understanding of the key concepts underlying the design and application of genetically encodable fluorescent biosensors to live cell imaging. Written in the successful Methods in Molecular Biology series format,

chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, *Fluorescent Protein-Based Biosensors: Methods and Protocols* promises to be a valuable resource for researchers interested in applying current biosensors to the study of biochemical processes in living cells as well as those interested in developing novel biosensors to visualize other cellular phenomena.

*Mathematical Tables* Hammerhead Press

This book presents a mechanistic approach—mathematical modeling—for carrying out dental materials research. This approach allows researchers to go beyond the null hypothesis and obtain a solution that is more general and therefore predictive for conditions other than those considered in a study. Hence it can be used either on

---

its own or to complement the commonly used statistical approach. Through a series of practical problems with wide-ranging application, the reader will be guided on: How to construct a mathematical model for the behavior of dental materials by making informed assumptions of the physical, chemical, or mechanical situation How to simplify the model by making suitable simplifications How to calibrate the model by calculating the values of key parameters using experimental results How to refine the model when there are discrepancies between predictions and experiments Only elementary calculus is required to follow the examples and all the problems can be solved by using MS Excel© spreadsheets. This is an ideal book for dental materials researchers without a strong mathematical background who are interested in applying a more mechanistic approach to their research to give deeper insight into the problem at hand. Advance praise for *Mathematical Models for Dental Materials Research*: “This is a nice addition for research students on how to conduct their work and how to manage data analysis. It brings together a number of important aspects of dental materials investigations which has been missing in the literature. The practical examples make it much easier to understand.” – Michael F. Burrow, Clinical Professor in Prosthodontics, The University of Hong Kong “The great strengths of this volume are the real world examples of dental materials research in the successive chapters. In turn, this is an outcome of the outstanding expertise of both authors. I warmly recommend this book to the dental biomaterials community worldwide.” – David C. Watts, Professor of Biomaterials Science, University of Manchester, UK
