Congratulations on acquiring your new CANON "EOS" R3 device. And are you looking for a guide to help you make the most out of your device? Welcome on board as this user guide has been specifically written to give you a well detailed explanation on all you need to know. Firstly Canon EOS (Electro-Optical System) is a Canon Inc. autofocus single-lens reflex camera (SLR) and mirrorless camera series. All EOS cameras, beginning with the Canon EOS 650 in 1987, utilized 35 mm film until October 1996, when the EOS IX was launched utilizing the new and short-lived APS film. The D30 was unveiled in 2000 as the first digital SLR designed and manufactured exclusively by Canon. Since 2005, all new EOS cameras have employed digital image sensors instead of film. Canon's current digital SLR (DSLR) range, as well as, with the release of the Canon EOS M in 2012, Canon's mirrorless interchangeable-lens camera (MILC) system, is based on the EOS series. The system was expanded in 2018 with the release of the EOS R camera, Canon's first full frame mirrorless interchangeable lens system. The development project was known as (Electro Optical System). EOS is also the name of the goddess of dawn in Greek mythology, which adds to the design's generational significance.

[1] Handel Gothic typeface was used to design the EOS symbol. It primarily competes with Nikon's F series and successors, as well as autofocus SLR systems from Olympus Corporation, Pentax, Sony/Minolta, and Panasonic/Leica. The EF lens mount, which replaced the preceding FD lens mount, is at the heart of the system, supporting mostly manual-focus lenses. The RF mount was added to the system with the EOS R full frame camera. On this guide, we focused on how you can explore the possibilities of the Canon EOS R3 device on movie recording and shooting mode. For example how you can record movies during still photo shooting and lots more.
