This volume brings together a wide selection of primary source materials from the theatrical history of the Middle Ages. The focus is on Western Europe between the fall of the Roman Empire and the emergence of markedly Renaissance forms in Italy. Early sections of the volume are devoted to the survival of Classical tradition and the development of the liturgical drama of the Roman Catholic Church,

but the main concentration is on the genesis and growth of popular religious drama in the vernacular. Each of the major medieval regions is featured, while a final section covers the pastimes and customs of the people, a record of whose traditional activities often only survives in the margins of official recognition. The documents are compiled by a team of leading scholars in the field and the over 700 documents are all presented in modern English translation.

With amazing low-light capabilities, incredible definition, intelligent autofocus and a host of other

features, digital cameras have now become so powerful that they have left their users behind. Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. One hundred of Gordon's beautiful photos are given with his own expert commentary; full settings and camera details are

included, and a host of tips and tricks let photographers of any level learn something from every example. The shots are taken with a wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.

An important scientific innovation rarely makes its way by gradually winning over and converting its opponents. . . What does happen is that its opponents die out and that the growing generation is familiarised with the idea from the beginning. (Max Planck, 1936) Humans have always attempted to influence their environment. Indeed, it seems likely that the understanding of aspects of this environment, and its control, whether by trial-and-error or by actual study and analysis, are crucial to the very process of civilisation. As an illustration, boats and ships were used even in pre-history for fishing, transport, discovery, and trade. Small sailing craft are controlled primarily by working the main-sheet and rudder in conjunction. Once mastered, further experimentation (see

e. g. the 7th chapter of the *Kon Tiki Expedition*, with an entertaining account of the possible use of multiple movable centerboards on a sailing raft) led to a - sic change: keeled hulls and corresponding rigging, which made sailing against the wind possible. This was a relatively recent feature: even the far-voyaging Vikings relied primarily on beachable ships and recourse to oars. It was probably crucial in the west-to-east settlement of Oceania, from Taiwan to Easter Island. A 20th century development is the self-steering device, which regulates boat travel automatically under mildly varying wind conditions; but this has had a much smaller social impact.
