Computer Forensics: Evidence Collection and Management examines cyber-crime, E-commerce, and Internet activities that could be used to exploit the Internet, computers, and electronic devices. The book focuses on the numerous vulnerabilities and threats that are inherent on the Internet and networking environments and presents techniques and suggestions for corporate security personnel, investigators, and forensic examiners to successfully identify, retrieve, and protect valuable forensic evidence for litigation and prosecution. The book is divided into two major parts for easy reference. The first part explores various crimes, laws, policies, forensic tools, and the information needed to understand the underlying concepts of computer forensic investigations. The second part presents information relating to crime scene investigations and management, disk and file structure, laboratory construction and functions, and legal testimony. Separate chapters focus on investigations involving computer systems, e-mail, and wireless devices. Presenting information patterned after technical, legal, and managerial classes held by computer forensic professionals from Cyber Crime Summits held at Kennesaw State University in 2005 and 2006, this book is an invaluable resource for those who want to be both efficient and effective when conducting an investigation.

Surveys key advances in commercial satellite communications and what might be the implications and/or opportunities for end-users and service providers in utilizing the latest fast-evolving innovations in this field. This book explores the evolving technical options and opportunities of satellite networks. Designed to be a self-contained reference, the book includes background technical material in an introductory chapter that will serve as a primer to satellite communications. The text discusses advances in modulation techniques, such as DBV-S2 extensions (DVS-S2X); spotbeam-based geosynchronous and medium earth orbit High Throughput Satellite (HTS) technologies and Internet applications; enhanced mobility services with aeronautical and maritime applications; Machine to Machine (M2M) satellite applications; emerging ultra HD technologies; and electric propulsion. The author surveys the latest innovations and service strategies and the resulting implications, which involves: Discussing advances in modulation techniques and HTS spotbeam technologies Surveying emerging high speed aeronautical mobility services and maritime and other terrestrial mobility services Assessing M2M (machine-to-machine) applications, emerging Ultra HD video technologies and new space technology Satellite communication is an integral part of the larger fields of commercial, television/media, government, and military communications, because of its multicast/broadcast capabilities, mobility, reliability, and global reach. High Throughput Satellites) are expected to revolutionize the field during this decade, providing very high speed, yet cost-effective, Internet access and connectivity anywhere in the world, in rural areas, in the air, and at sea. M2M connectivity, enabled by satellite communications, connects trucks on transcontinental trips, aircraft in real-time-telemetry aggregation, and mercantile ships. A comprehensive analysis of the new advances in satellite communications, *Innovations in Satellite Communications Technology* is a reference for telecommunications and satellite providers and end-users, technology investors, logistic professionals, and more.

This comprehensive book responds to the growing demand to study entrepreneurship as a key driver of innovation and competitive advantage. Challenging the existing idea that technological entrepreneurship exists predominantly in SMEs and as a result of market demands, the author argues that a commitment to entrepreneurship remains the most effective strategy for sustaining wealth generation for both organisations and entire nations. The aim of *Technological Entrepreneurship* is to provide the reader with additional knowledge and

understanding of the concepts associated with the exploitation of technological entrepreneurship, and to demonstrate how associated management principles are somewhat different to those utilised in market-driven entrepreneurship. Validation of presented theoretical concepts is achieved through coverage of processes and practices utilised by real world organisations seeking to achieve maximum wealth generation, with specific emphasis on how technological entrepreneurship is the source of disruptive innovation within service sector organisations and how the philosophy is causing fundamental change in the provision of healthcare.

Cell phones and Personal Digital Assistants (PDAs) have become indispensable tools for today's highly mobile workforce. Small and relatively inexpensive, these devices can be used not only for voice calls, simple text messages, and Personal Information Management (PIM), but also for many functions done at a desktop computer. While these devices provide productivity benefits, they also pose new risks. This document is intended to assist organizations in securing cell phones and PDAs. More specifically, this document describes in detail the threats faced by organizations that employ handheld devices and the measures that can be taken to counter those threats.

Inhaltsangabe:Abstract: This diploma thesis paper is, after contemplating the current state of ITC / telco's shift towards commoditisation and challenges in facing the upcoming overall mobile / wireless development (beyond 3G, B3G, / 4G) aimed at prosperously resolving a marketing proposition on a quite ingenious Siemens mobile P2P communication solution, named Siemens Anyw@re PocketSERVent, by virtue of the marketers' generic means, the Product-marketing mix dedicated to fundamental questions of product, price, promotion, place (P4). Strategic marketing and ITC business as well as down-to-earth / operational themes will get propelled. The chief emphasis is put on surging virtualisation related to product / svce / property and, as usually less exposed, the shift towards intangible values, foremost customer relationship and momentum of the hi-tech. brand (perception). The intend is to supply a big yet detailed P2P, 3G / B3G and wireless picture to the marketer (even accountant) as well as applied marketing / pricing issues to the S/W developer or mobile techn. expert. After a brief overview (ch. 1), chapter 2 is about introducing the main points rel. peer-to-peer (P2P) it's rather social impacts, technological mindset and ongoing research, as well as contemporary benefits. The intention is to free both the subject and evaluation from hype or byzantine aspects; to present P2P's potential as well as existent contributions to corporations aware of bus. value from IT, paralleling the fashion well-known IT players dominate e.g. Web services. Chapter 3 prepares a general understanding of present-day and forthcoming ITC leitmotivs, more precisely, for why ITC, esp. 3G innovations, have been disappointing. Analysing soft product and service (svce / svc.) innovations is upon hard value; at the dawn of this decade's decentralisation / mobilisation and virtualisation following results and side effects of globalisation the tractate's author is going to constantly question whether proven and established marketing practice can answer the train of virtual i.e. through-and-through digital products, value chains, organisations or business and / or value creation communities. Nevertheless ch. 3's focal point is the wireless or mobile wireless, resp., upgrowth (convergence rel. mobile IP, P2P, B3G / 4G). At beginning of the new millennium telcos are forced to get out of the industrial age's proprietary hardware and services. Less because of customer's [...]

This third book in the three-part series on the History of the GPU covers the second to sixth eras of the GPU, which can be found in anything that has a display or screen. The GPU is now part of supercomputers, PCs, Smartphones and tablets, wearables, game consoles and handhelds, TVs, and every type of vehicle including boats and planes. In the early 2000s the number of GPU suppliers consolidated to three whereas now, the number has expanded to almost 20. In 2022 the GPU market was worth over \$250 billion with over 2.2 billion GPUs being sold just in PCs, and more than 10 billion in smartphones. Understanding the power and history of these devices is not only a fascinating tale, but one that will aid your understanding of some of the developments in consumer electronics, computers, new automobiles, and your fitness watch.
