Dynamic-clamp is a fascinating electrophysiology technique that consists of merging living neurons with computational models. The dynamic-clamp (also called "conductance injection") allows experimentalists and theoreticians to challenge neurons (or any other type of cell) with complex conductance stimuli generated by a computer. The technique can be implemented from neural simulation environments and a variety of custom-made or commercial systems. The real-time interaction between the computer and cell also enables the design of recording paradigms with unprecedented accuracy via a computational model of the electrode. **Dynamic-Clamp: From Principles to Applications** contains contributions from leading researchers in the field, who investigate these paradigms at the cellular or network level, in vivo and in vitro, and in different brain regions and cardiac cells. Topics discussed include the addition of artificially-generated synaptic activity to neurons; adding, amplifying or neutralizing voltage-dependent conductances; creating hybrid networks with real and artificial cells; attaching simulated dendritic tree structures to the living cell; and connecting different neurons. This book will be of interest to experimental biophysicists, neurophysiologists, and cardiac physiologists, as well as theoreticians, engineers, and computational neuroscientists. Graduate and undergraduate students will also find up-to-date coverage of physiological problems and how they are investigated.

A secret worth killing for, a woman with no past, and an act of treason that changed America: #1 bestselling author Brad Meltzer returns with *The House of Secrets*. "When Hazel Nash was six years old, her father taught her: mysteries need to be solved. He should know. Hazel's father is Jack Nash, the host of America's favorite conspiracy TV show, *The House of Secrets*. Even as a child, she loved hearing her dad's tall tales, especially the one about a leather book belonging to Benedict Arnold that was hidden in a corpse. Now, years later, Hazel wakes up in the

hospital and remembers nothing, not even her own name. She's told she's been in a car accident that killed her father and injured her brother. But she can't remember any of it, because of her own traumatic brain injury. Then a man from the FBI shows up, asking questions about her dad -- and about his connection to the corpse of a man found with an object stuffed into his chest: a priceless book that belonged to Benedict Arnold. Back at her house, Hazel finds guns that she doesn't remember owning. On her forehead, she sees scars from fights she can't recall. Most important, the more Hazel digs, the less she likes the person she seems to have been. Trying to put together the puzzle pieces of her past and present, Hazel Nash needs to figure out who killed this man -- and how the book wound up in his chest. The answer will tell her the truth about her father, what he was really doing for the government -- and who Hazel really is. Mysteries need to be solved. Especially the ones about yourself."
