Parentology Simon and Schuster

An award-winning scientist offers his unorthodox approach to childrearing: “ Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions ” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you ’ re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones.

Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley ’ s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with

lessons that go down easy. You ’ ll be laughing and learning at the same time.

House cleaning has been an innate human activity forever but only since the early 19th century have mechanical devices replaced the physical labor (performed mostly by women). Mechanical carpet sweepers were replaced by manual suction cleaners, which in turn were replaced by electric vacuum cleaners in the early 20th century. Innovative inventors, who improved vacuum cleaners as electricity became commonly available, made these advances possible. Many early manufacturers failed, but some, such as Bissell, Hoover, Eureka and others, became household names as they competed for global dominance with improved features, performance and appearance. This book describes the fascinating people who made this possible, as well as the economic, cultural and technological contexts of their

times. From obscure beginnings 200 years ago, vacuum cleaners have become an integral part of modern household culture.

Dyson has become a byword for high-performing products, technology, design, and invention. Now, James Dyson, the inventor and entrepreneur who made it all happen, tells his remarkable and inspirational story in *Invention: A Life*, "one of the year's most relevant and revelatory business books" (The Wall Street Journal). Famously, over a four-year period, James Dyson made 5,127 prototypes of the cyclonic vacuum cleaner that would transform the way houses are cleaned around the world. In devoting all his resources to iteratively setbacks came hard-fought success. His products—including vacuum cleaners, hair dryer and hair stylers, and fans and purifiers—are not only revolutionary technologies, but design classics. This was a legacy of his time studying at the Royal College of Art in the 1960s, when he was inspired by some of the most famous artists, designers, and inventors of the era, as well as his engineering heroes such as Frank Whittle and Alex Issigonis. In *Invention: A Life*, Dyson reveals how he came to set up his own company and led it to become one of the most inventive technology companies in the world. It is a compelling and dramatic tale, with many obstacles overcome.

Dyson has always looked to the future, even setting up his own university to help provide the next generation of engineers and designers. For, as he says, "everything changes all the time, so experience is of little use." Whether you are someone who has an idea for a better product, an aspiring entrepreneur, whether you appreciate great design or a page-turning read, *Invention: A Life* is an "entertaining and inspiring memoir" (Kirkus Reviews, starred review) that offers motivation, hope, and much more.

its insightful recommendations. Popular Mechanics Home Appliance Repair Manual A National Book Critics Circle Award-winner elevates the ordinary events that occur to a man on his lunch hour into “a constant delight” of a novel (The Boston Globe). In this startling, witty, and inexhaustibly inventive novel, New York Times–bestselling author Nicholson Baker uses a one-story escalator ride as the occasion for a dazzling reappraisal of everyday objects and rituals. From the humble milk carton to the act of tying one’s shoes, *The Mezzanine* at once defamiliarizes the familiar world and endows it with loopy and euphoric poetry. Baker’s accounts of the ordinary become extraordinary through his sharp storytelling and his unconventional, conversational style. At first glance, *The Mezzanine* appears to be a book about nothing. In reality, it is a brilliant celebration of things, simultaneously demonstrating the value of reflection and the importance of everyday human experiences. “A very funny book . . . Its 135 pages probably contain more insight into life as we live it today than anything currently on the best-seller list.” —The New York Times “Captures the spirit of American corporate life and invests it with a passion and sympathy that is entirely unexpected.” —The Seattle Times “Among the year’s best.” —The

Boston Globe “Baker writes with appealing charm . . . The kimono-clad android robot that recently made its debut as the new greeter at the entrance of Tokyo’s Mitsukoshi department store is just one example of the rapid advancements being made in the field of robotics. Cognitive robotics is an approach to creating artificial intelligence in robots by enabling them to learn from and respond to real-world situations, as opposed to pre-programming the robot with specific responses to every conceivable stimulus. Presenting the contributions of international experts from various disciplines within the field, *Cognitive Robotics* provides novel material and discusses advanced approaches in the field of intelligent robotics. It explains the various aspects of the topic to provide readers with a solid foundation on the subject. This edited collection presents theoretical research in cognitive robotics. It takes a multidisciplinary approach that considers the artificial intelligence, physical, chemical, philosophical, psychological, social, cultural, and ethical aspects of this rapidly emerging field. The editor is a prominent researcher whose Lovotics

research into emotional bonds with robots is widely recognized. Supplying an accessible introduction to cognitive robotics, the book considers computational intelligence for cognitive robotics based on informationally structured space. It examines how people respond to robots and what makes robots psychologically appealing to humans. The book contextualizes concepts in the history of studies on intelligence theories and includes case studies of different types of robots in action. Today's business environment is characterized by hypercompetition and the development of the Internet. Fierce competition between suppliers and the availability of abundant information have caused a shift in bargaining power from producers/suppliers to buyers and consumers. Consequently, Business Process Management (BPM) OCo i.e. management tool to optimize and control operations flows by viewing the transactions within and outside corporations as processes, with the focus on speedily meeting customers" needs OCo has emerged as a popular management framework. However, recent research on BPM has put too much emphasis on information sharing and the visualization of business processes using IT innovations. This book argues that BPM must be linked with existing management tools. Based on survey results of

It was 1987 when the idea of sailing away into the sunset became a lot more than just a dream. I had spent my whole career enjoying my work as a TV cameraman, lighting director, and technical coordinator with BBC. During that time, I raised a family and saw Lucy and Chris grow into two fine adults. Alas, my marriage failed after twenty-one years, which led me to start thinking of a new beginning. I had been messing about in boats since the age of ten, so sailing was my passion. I was not yet ready to retire, but the opening of the new marina in Penarth made it possible to live aboard and still continue working. Eclipse of Penarth became my home, with Barney, our beloved four-legged friend, for company. Quite soon I met Evey, and even though I made it very clear that I had serious thoughts of sailing away, she was not deterred from the idea of living on a boat. We married on June 18, 1993, and with my prospects of early retirement looking good, after thirty years of service, the stage was set for us to leave on our first wedding anniversary and begin our twenty-year honeymoon around the world.
