Elsevier

2005 will be remembered as a year with crucial implications for the Korean peninsula and beyond. It may go down in history as the year the United States was able to establish a foundation to resolve, peacefully and once and for all, the intractable problem of North Korea's nuclear

weapons activity. It could also be the year that North Korea committed itself to becoming a nuclear weapons state without compromise. Understanding that 2005 had the potential to be a watershed, the contributors to this timely volume--which grew out of a major conference at the Walter H. Shorenstein Asia- Pacific Research Center at Stanford University--present a snapshot of what is happening in North Korea, consider how Americans and South Koreans view current developments, and offer policy suggestions about what can and should be done going forward, long after 2005 draws to a close. Contributors include Robert Carlin (Korean Peninsula Energy Development Organization), Haksoon Paik (Sejong Institute, Korea), William B. Brown (U.S. Civil Service, ret., and George Mason University), Dong Yong Sueng (Samsung Economic

---

Research Institute), David Hawk (U.S. Committee for Human Rights in North Korea), Kim Ki-Sik (People's Solidarity for Participatory Democracy), Scott Snyder (Asia Foundation/Pacific Forum CSIS), Taik-young Hamm (Kyungnam University), and Henry S. Rowen (Shorenstein APARC).

"Have you lost your mind? They'll kill you. Are you willing to literally bet your life on--" "On my own technical expertise? Yes. Always." It was supposed to be just another software job. It wasn't supposed to involve dodging bullets, igniting explosions, out-driving hit men, or bluffing his way through the dens of international crime lords. Danny's big brain has always

served him well at a workstation or a soldering bench, but will he be smart enough to survive the engineering challenge of a lifetime? Danny, a onetime computer whiz-kid now in his late 30s, is still lamenting his latest dot-com failure when tech investor Jason Tuttle offers him a special assignment: hack into Tungsten Medical Technologies and steal their pharmaceutical research. At first, Danny and his team of semi-competent geeks relish the chance to play-act as cyber-criminals, but they soon discover they aren't the only ones interested in the secretive biotechnology firm. Their ill-timed computer shenanigans interrupt an armed

---

break-in of the laboratory by the Russian mafia, and Danny lands squarely in the crosshairs of a local cocaine kingpin. He soon finds himself hunted by drug dealers and exploited by Machiavellian corporate moguls in a battle over a test tube of genetically engineered bacteria. With the help of Tina, an amateur microbiologist desperate for professional recognition, Danny must use his technical skills to elude his powerful pursuers - and, with luck, maybe even beat them at their own game. Dopamine is a present-day cyberpunk novel - and a celebration of the fact that such a thing as "a present-day cyberpunk novel" is even possible.

Featuring some of the most accurate and accessible depictions of computer hacking and biotechnology ever to appear in a work of fiction, Dopamine is a wild ride for anyone who marvels at knowing that the real world we live in today was once strictly the realm of far-fetched fantasy. *Bad Company* CRC Press

Kathy was an overachiever-an economist, technical writer, and classical singer married 27 years to her college sweetheart. It looked like Kathy was fine. But deep within her hid a pain from infancy so severe that a cascade of adult life crises finally triggered it. And once it exploded, the pain was unbearable. Kathy was suffering attachment disorder, a psychological condition potentially affecting almost half the US population. Caused by traumatic stress in the first three years of life, attachment disorder correlates with the nation's 50 percent divorce rate and

---

widespread mental health issues. Yet no one talks about its prevalence, so many sufferers go untreated, forced to live with their pain in silence-without a hint of its cause. This was certainly true for Kathy. But when her initial forays into psychiatric help failed, Kathy decided to treat herself. It was a mistake that almost cost her life. Told with candor and quirky, ironic humor, *Don't Try This Alone* will resonate with anyone suffering attachment damage. It knows no boundaries; it strikes those who believe they had wonderful childhoods as well as the obviously abused. Yet there's hope! Kathy's story also shows: help and healing are out there.

PC Mag Silky Oak Press  
A new edition of the first travel guide to cover the practical aspects of travelling to and around North Korea -- a country which both intrigues and concerns the international community. Everything a genuine traveller needs is here, including red tape and security issues, access from South Korea and Beijing, routes outwards from Pyongyang, and

opportunities for excursions into unspoilt countryside. Altogether a fascinating insight into the culture and history of a country that currently exists in virtual isolation from the rest of the world.

This book presents a review of the latest advances in speech and video compression, computer networking protocols, the

assessment and monitoring of VoIP quality, and next generation network architectures for multimedia services. The book also concludes with three case studies, each presenting easy-to-follow step-by-step instructions together with challenging hands-on exercises. Features: provides illustrative worked examples and end-of-chapter problems; examines speech and video compression techniques, together with speech and video compression standards; describes the media transport protocols RTP and RTCP, as well as the VoIP signalling protocols SIP and SDP; discusses the concepts of VoIP quality of service and quality of experience; reviews next-generation networks based on the IP multimedia subsystem and

---

mobile VoIP; presents case studies on building a VoIP system based on Asterisk, setting up a mobile VoIP system based on Open IMS and Android mobile, and analysing VoIP protocols and quality.

In a world of bureaucracy gone mad, how does a good cop get the job done?

Violence. Corruption.

Madness. Peter Balino is old-school - as cops go, he's a good one. But what the hell does good mean anyway?

Aided by friends in high places, the Asian Triads do as they please. To go against them is suicide - but Balino always did like those odds.

His marriage is over, his career destroyed, and the woman he loves is an unwilling pawn in a brutal and

dangerous game ... and only Balino can save her. With everything on the line, it's time for one Vet to go back to war - and it's time to start making his own rules. "WHITE is a brutal, heart-pounding, ticking time-bomb of a thriller. Like life on the Frontline, it is brutally, needlessly, horribly violent - Balino is a great Anti-Hero, and The Giant makes for one of the nastiest characters ever to appear on the page. Highly recommended - but definitely not for the faint-hearted."

The Handbook of Food Products Manufacturing is a definitive master reference, providing an overview of food manufacturing in general, and then covering the processing and manufacturing of more than 100 of the most common food products. With editors and contributors from 24 countries in North America, Europe, and Asia, this guide provides international expertise and a truly global perspective on food manufacturing.

*North Korea* CRC Press  
Packed with case studies and problem calculations, Handbook of Food Processing: Food Safety, Quality, and Manufacturing Processes presents the information necessary to design food processing operations and describes the equipment needed to carry

them out in detail. It covers the most common and new food manufacturing processes while addressing rele

**Handbook of Food Processing, Two Volume Set** Springer

The world of smart shoes, appliances, and phones is already here, but the practice of user experience (UX) design for ubiquitous computing is still relatively new. Design companies like IDEO and frogdesign are regularly asked to design products that unify software interaction, device design and service design -- which are all the key components of ubiquitous computing UX -- and practicing designers need a way to tackle practical challenges of design. Theory is not enough for them -- luckily the industry is now mature

---

enough to have tried and tested best practices and case studies from the field. Smart Things presents a problem-solving approach to addressing designers' needs and concentrates on process, rather than technological detail, to keep from being quickly outdated. It pays close attention to the capabilities and limitations of the medium in question and discusses the tradeoffs and challenges of design in a commercial environment. Divided into two sections, frameworks and techniques, the book discusses broad design methods and case studies that reflect key aspects of these approaches. The book then presents a set of techniques highly valuable to a practicing designer. It is intentionally not a comprehensive tutorial of user-centered design's

that is covered in many other books'but it is a handful of techniques useful when designing ubiquitous computing user experiences. In short, Smart Things gives its readers both the "why" of this kind of design and the "how," in well-defined chunks. Tackles design of products in the post-Web world where computers no longer have to be monolithic, expensive general-purpose devices. Features broad frameworks and processes, practical advice to help approach specifics, and techniques for the unique design challenges. Presents case studies that describe, in detail, how others have solved problems, managed trade-offs, and met successes

If you read technology

---

news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2013 and make predictions on what will and won't happen in 2014. You can read what did happen in the mobile technology in 2013. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my

news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business,

---

who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones

and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2014 for

---

the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2013 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about

one topic at a time in the earlier chapters. Table of Contents Preface Introduction Chapter 1: 2014 Predictions Chapter 2: Mobile Marketshare Chapter 3: Apple Chapter 4: Samsung Chapter 5: Google Chapter 6: Microsoft Chapter 7: Nokia Chapter 8: Blackberry Chapter 9: Amazon Chapter 10: Social Media Chapter 11: Yahoo Chapter 12: Carriers Chapter 13: 2013 Predictions Chapter 14: Essays Appendix *Peter Reinhart's Whole Grain Breads* Ten Speed Press PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. ## Springer Publishing Company

In this dystopian trilogy opener, an elderly scientist reminisces, wondering why both the planet and his family fell apart. Part Field Notes from a Catastrophe, part 1984, part World War Z, this striking dystopian novel takes us deep into the battered, shattered world of 2050. The European Union has broken apart.

Multiethnic great powers like Russia and China have shriveled. America's global military footprint has virtually disappeared, and the United States remains united in name only.

Nationalism has proven the century's most enduring force as ever-rising global temperatures have supercharged each-against-all competition and conflict among the now three

hundred-plus members of an increasingly feeble United Nations. As he navigates the world of 2050, Julian West offers a roadmap for the path we're already on, a chronicle of impending disaster, and a faint light of hope. He may be humanity's last best chance to explain how the world unraveled—if he can survive the savage beauty of the Splinterlands. Praise for Splinterlands “In a chilling, thoughtful, and intuitive warning, foreign policy analyst Feffer . . . takes today's woes of a politically fragmented, warming Earth and amplifies them into future catastrophe . . . . This novel is not for the emotionally squeamish or optimistic; Feffer's confident recitation of world collapse is terrifyingly plausible, a short but encompassing look at world

---

tragedy.” —Publishers Weekly, Starred Review “Feffer’s book is a wild ride through a bleak future, casting a harsh, thought-provoking light on that future’s modern-day roots.” —Foreword Reviews “A startling portrait of a post-apocalyptic tomorrow that is fast becoming a reality today. Fast-paced, yet strangely haunting, Feffer’s latest novel looks back from 2050 on the disintegration of world order told through the story of one broken family—and offers a disturbing vision of what might await us all if we don’t act quickly.” —Barbara Ehrenreich, New York Times—bestselling author of *Nickel and Dimed* and *Had I Known*, and founder of the Economic Hardship Reporting Project [Johnson's Dictionary](#) Elsevier

In this follow-up to his award-winning book *The Bread Baker's Apprentice*, Peter Reinhart offers groundbreaking methods for baking whole grain breads that taste better than any you’ve ever had. We know whole grain breads are better for us, but will we actually eat them, much less take time to bake them? Yes, says beloved baking instructor Peter Reinhart, but only if they are very, very good. So Reinhart, with his decades of experience crafting amazing artisanal breads, has made it his mission to create whole grain breads that are nothing short of incredible. And because his approach is also simpler and less labor intensive than conventional techniques, you’ll choose to make and eat these breads. His fifty-five recipes for whole grain sandwich, hearth, and specialty breads, plus bagels, crackers, and more, incorporate widely available whole wheat flour as

---

well as other flours and grains such as rye, barley, steel-cut oats, cornmeal, and quinoa. Each is so rich with flavor and satisfying texture that white-flour counterparts pale in comparison. Written in Reinhart's famously clear style and accompanied by inspiring photographs, these recipes were perfected with the help of nearly 350 testers. Introductory chapters provide a tutorial, with step-by-step photographs, of the delayed fermentation method that is at the heart of these recipes, as well as a crash course in baking science, discussions of grains other than wheat, and more. Advanced bakers will relish Reinhart's innovative techniques and exacting scientific explanations, and beginning bakers will rejoice in the ease of baking wholesome breads with such extraordinary flavor.

**Splinterlands** BoogarLists  
Multi-point Cooperative  
Communication Systems:

Theory and Applications mainly discusses multi-point cooperative communication technologies which are used to overcome the long-standing problem of limited transmission rate caused by the inter-point interference. Instead of combating the interference, recent progress in both academia and industrial standardizations has evolved to adopt the philosophy of "exploiting" the interference to improve the transmission rate by cooperating among multiple points. This book addresses the multi-point cooperative communication system systematically giving the readers a clear picture of the technology map and where the discussed schemes may fit. This book includes not only the theories of the paradigm-shifting multi-point cooperative

---

communication, but also the designs of sub-optimal cooperative communication schemes for practical systems. Ming Ding is a senior researcher at Sharp Laboratories of China; Hanwen Luo is a professor at Shanghai Jiao Tong University.
