Assessments, understood as tools for tracking what and how well students have learned, play a critical role in the classroom. Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K-12 Science Education (Framework) and Next Generation Science Standards (NGSS). These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at

making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. *Developing Assessments for the Next Generation Science Standards* recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. *Developing Assessments for the Next Generation Science Standards* makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity

to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

During the past four years, the countries of the European periphery – the so-called PIIGS (Portugal, Ireland, Italy, Greece and Spain) – have been experiencing an economic-financial crisis that can only be compared to the Great Depression. To solve the crisis, the EU and the IMF instituted bailout programs for the debit countries on conditions of austerity and structural reforms. In this volume 20 social scientists, using both theoretical and empirical tools, delve into the causes and the social impacts of this crisis. The volume also provides an excellent background for a better comprehension of the dynamics of structural and political changes now taking place within the European Union.

The social impacts cover a range of consequences, including poverty, unemployment, anti-migrant attitudes, a decline of welfare and health indicators, post-traumatic stress disorders, national humiliation, political alienation and social protest. The authors analyse the “ international ” and the “ domestic ” causes of the crisis, while some of them underline the importance of both factors. In the concluding chapter, the editors undertake a synthesis of the previous chapters, and extract a number of policy recommendations that – if adopted – could transform the current financial crisis into a growth-opportunity for the European Union and its member states.

Personal status laws remain a highly politicized area of debate in the Middle East, as the arena in which the contentious issues of women's rights, religion and minority groups meet. This is especially so when it comes to divorce. In Tunisia, with the moderate Islamist party Ennahda winning the first elections following the 2011 revolution, questions of religion in public life have gained greater primacy. The country is often hailed for its progressive personal status code, seen as an exception to the practice in many other Muslim countries. Polygamy is banned, for example, and in divorce cases there is gender equality. However, Tunisia's legal system contains many gaps and leaves much room for interpretation. Bearing in mind this importance of the role of Islam in judicial courts, Maaïke Voorhoeve investigates whether the more progressive, and ostensibly secular, principles enshrined in Tunisia's Personal Status Code of 1956 are in fact adhered to in divorce cases. And if not, whether judges frequently turn to the Sharia, custom or societal norms as their primary sources of guidance. Through extensive research in the Tunisian courts, Voorhoeve investigates the different types of divorce, the arguments presented to the court and the consequent legal decisions made. She focuses on the role of female judges, testing the assumption that they adjudicate in a more gender-neutral way and examining the impact they have had on Tunisian legal culture and through this, Tunisian society. Gender and Divorce Law in North Africa therefore sheds light on the wide-reaching debate throughout North Africa and the Middle East concerning the role of Islam and Sharia in the public, political, legal and private spheres. This debate, which often pits secularists against Islamists, but is in reality much more nuanced, is key in a variety of fields, including Middle East studies and Islamic law.

Over the past 20 years, the perception of tourism as an effective contributor to socio-economic development in the developing world has propagated, with many viewing tourism as a provider for poverty alleviation and towards other UN Millennium Development Goals. Over the same period, readers have become familiar with the paradoxes, complexities and inequalities of tourism in relation to development, wealth creation, growth, redistribution, governance and 'hosts-guests' relationships. This volume further extends this critical debate with a much-needed cohesive publication on Sub-Saharan Africa (SSA). In an era of fluctuating tourist arrivals at global level, the growth of tourism in SSA requires deeper consideration in terms of its inconsistent and questionable implications at local level. Taking as a central theme the debate on whether tourism should be used in development efforts, this book examines

the way in which tourism has controversially become the way forward to development in several SSA locations and assesses bottlenecks to sustainable development as well as dilemmas and challenges faced by those SSA destinations seeking to achieve development through tourism. It offers an explicit set of chapters adopting a multi-disciplinary approach, drawing upon tourism studies, human geography, sociology, anthropology, political economy, development and environmental studies, and integrates case studies authored by local African practitioners and academics to produce a book that gave voice to local experts on local realities. Combining an overview of key theories, concepts, contemporary issues and debates as well as practical insights from a wide range of regions in SSA, this book will be a valuable resource for those investigating the role of tourism in development.

Forecasts suggest that solid growth in Asia is likely to continue. By 2030, Asian economies are expected to be roughly four times larger than they are today, and Asia's share of global

output is expected to rise to 40% of the global total. In contrast, most countries in the Pacific have experienced extended periods of relatively low growth, and many have suffered significant setbacks from disasters. This book analyzes and discerns some of the main trends driving economic relations between Asia and the Pacific. It aims to assess how the 14 Pacific developing member countries of the Asian Development Bank can better tap into opportunities arising from Asian growth, and explores how the economic and financial integration between Asia and the Pacific can be expanded to benefit both regions. Pacific Opportunities identifies critical constraints on integration and sets out policy reforms to address these constraints to mutually beneficial economic ties between the two regions. These two very different regions have drawn closer economically over the past two decades as improvements in transport infrastructure and advances in information and communications technology have helped to bridge geographic distance.

The Irish Yearbook of International Law (IYIL) supports research into Ireland's practice in international affairs and foreign policy, filling a gap in existing legal scholarship and assisting in the dissemination of Irish thinking and practice on matters of international law. On an annual basis, the Yearbook presents peer-reviewed academic articles and book reviews on general issues of international law. Designated correspondents provide reports on international law developments in Ireland, Irish practice in international bodies, Ireland and the Law of the Sea and the law of the European Union as relevant to developments in Ireland. In addition, the Yearbook reproduces key documents that reflect Irish practice on contemporary issues of international law. Publication of the Irish Yearbook of International Law makes Irish practice and opinio juris more readily available to Governments, academics and international bodies when determining the content of international law. In providing a forum for the documentation and analysis of North-South relations the Yearbook also makes an important contribution to post-conflict and transitional justice studies internationally. As a matter of editorial policy, the Yearbook seeks to promote a multilateral approach to international affairs, reflecting and reinforcing Ireland's long-standing commitment to multilateralism as a core element of foreign policy. **We Know All about You** NTA NET Computer Science Previous Papers for UGC NET/JRF Exams This book examines international efforts to

provide security in post-conflict sites and explains why internal security should be given precedence in statebuilding endeavours. The work begins by exploring the evolution of security sectors in mature liberal democratic states, before examining the attempts of such states to accelerate that evolutionary process in post-conflict sites through statebuilding and security sector reform. These discussions suggest interestingly different answers to the question of who should provide for internal security in international operations. When considering mature states, there are both practical and normative reasons as to why internal security has become the sole domain of police, with military forces being excluded from internal affairs. In peace and stability operations, on the other hand, difficulties with utilising police personnel have led to military forces being required to play internal security roles. This tension is investigated further through detailed case studies of three recent missions: Afghanistan, Timor-Leste and Solomon Islands. These case studies both reinforce and augment the practical and normative reasons for ensuring that internal security remains the domain of police. This then impacts upon peace and stability operations in two important ways. If we are to provide enduring security in post-conflict sites, we should both (i) prioritise

internal security agencies in security sector reform efforts, and (ii) prioritise ways of enabling police to play internal security roles in the contributing mission. This book will be of much interest to students of statebuilding, peace and conflict studies, military studies, police studies, historical sociology, security studies and IR in general.

The last two decades have witnessed a dramatic expansion and intensification of mineral resource exploitation and development across the global south, especially in Latin America. This shift has brought mining more visibly into global public debates and spurred a great deal of controversy and conflict. This volume assembles new scholarship that provides critical perspectives on these issues. The book marshals original, empirical work from leading social scientists in a variety of disciplines to address a range of questions about the practices of mining companies on the ground, the impacts of mining on host communities, and the responses to mining from communities, civil society and states. The book further explores the global and international causes, consequences and innovations of this new era of mining activity in Latin America. Key issues include the role of Canadian mining companies and their investment in the region, and, to a lesser extent, the role of Chinese mining capital. Several chapters take a regional perspective, while others are based on empirical data from specific countries including Bolivia, Brazil, El Salvador, Guatemala and Peru.

What are the impacts of population growth? Can our planet support the demands of the ten billion people anticipated to be the world's population by the middle of this century? While it is common to hear about the problems of overpopulation, might there be unexplored benefits of increasing numbers of people in the world? How can we both consider and harness the potential benefits brought by a healthier, wealthier and larger population? May more people mean more scientists to discover how our world works, more inventors and thinkers to help solve the world's problems, more skilled people to put these ideas into practice? In this book, leading academics with a wide range of expertise in demography, philosophy, biology, climate science, economics and environmental sustainability explore the contexts, costs and benefits of a burgeoning population on our economic, social and environmental systems.

What has been achieved regarding Turkey's efforts at integration to the EU and what obstacles remain to it achieving full membership? Like other developing countries, Turkey displays visible signs of advancement with rapid increases in living standards, greater mobility and the rapid spread of technology. Much of its legislation and political, economic and administrative systems are also now aligned to the EU and this process has undoubtedly contributed to democratization and modernization. At the same time problems in politics and society persist; the Gezi protests, limitations of freedom of expression, frequent occupational accidents in the mining and construction sectors, honour killings and political upheaval which has manifested itself most starkly with the recent coup attempt all

call attention to the challenges facing a country in the process of change. Charting the political, legal and economic relations between Turkey and the European Union since 1959 this book explores the relationship through phases such as association, customs union and candidacy. Each chapter covers a particular period in the relations and/or a theme which has both current and overall relevance to the conduct of the relations. In this way, the authors examine the impact of the EU in affecting change, what has been achieved and the obstacles that remain.
