Bangladesh is currently ranked as one of the most climate vulnerable countries in the world. In *Threatening Dystopias*, Kasia Paprocki investigates the politics of climate change adaptation throughout the South Asian nation. Drawing on ethnographic and archival fieldwork, she engages with developers, policy makers, scientists, farmers, and rural migrants to show how Bangladeshi and global elites ignore the history of landscape transformation and its attendant political conflicts. Paprocki looks at how groups craft economic narratives and strategies that redistribute power and resources away from peasant communities. Although these groups claim that increased production of export commodities will reframe the threat of climate change into an opportunity for economic development and growth, the reality is not so simple. For the country's rural poor, these promises ring hollow. As development dispossesses the poor from agrarian livelihoods, outmigration from peasant communities leads to precarious existences in urban centers. And a vision of development in which urbanization and export-led growth are both desirable and inevitable is not one the land and its people can sustain. *Threatening Dystopias* shows how a powerful rural movement, although hampered by an all-consuming climate emergency, is seeking climate justice in Bangladesh.

In recent years, the internet has developed very quickly and became a major source of information all over the planet. Many scientists have used search engine query data to forecast econometric time series like consumer confidence indicators, unemployment rates, retail sales, house price indices, stock prices, volatility of stocks and even commodity prices. Following the prior research this study analyzes the impact of internet search engine data on capital markets. Many authors already have contributed to index level data and most of them on the US market. This study adds to the existing literature on the German stock market. Two research questions are answered: First, whether an increase in search queries drives individual stock returns and second, whether queries affect the implied volatility of stock options. After controlling for seasonality, autocorrelation and general market risk, in the further analysis also the Price-to-Book valuation, one year performance and historical volatility are examined in interaction with internet search queries.

This book investigates everyday practices of intelligence cooperation in anti-terrorism matters, with a specific focus on the relationship between Europe and Britain. The volume examines the effective involvement of British anti-terrorism efforts in European cooperation arrangements, which until now have been overshadowed by the UK-US 'special relationship' and by political debates that overstate the divide between Britain and continental Europe.

In arguing that British intelligence has always had a European dimension, it provides a distinct perspective to the study of intelligence cooperation and the role of British intelligence therein. Mobilizing a 'field theory' approach, the book provides an original contribution to the understanding of intelligence cooperation by investigating everyday bureaucratic practices of 'ground-level' security professionals and police forces, embedded in a European 'field' structured around the exchange of anti-terror intelligence. It also accounts for the drivers behind cooperation by using 'field analysis,' which explains the trajectory and positioning of actors according to their 'capitals' rather than necessities dictated by threats or state decisions. This book will be of much interest to students of Security Studies, International Political Sociology, Intelligence Studies, and International Relations in general.

The British Parliament rewards close scrutiny not just for the sake of democracy, but also because the surprises it contains challenge our understanding of British politics. Commons and Lords pulls back the curtain on both the upper House of Lords and the lower House of Commons to examine their unexpected inner workings. Based on fieldwork within both Houses, this volume in the Haus Curiosities series provides a surprising twist in how relationships in each play out. The high social status of peers in the House of Lords gives the impression of hierarchy and, more specifically, patriarchy. In contrast, the House of Commons conjures impressions of equality and fairness between members. But actual observation reveals the opposite: while the House of Lords has an egalitarian and cooperative ethos that is also supportive of female members, the competitive and aggressive House of Commons is a far less comfortable place for women. Offering many surprises and secrets, this book exposes the sheer oddity of the British parliament system.

In 2007 INTEROP-VLab defined Enterprise Interoperability as "the ability of an enterprise system or application to interact with others at a low cost with a flexible approach". Enterprise Interoperability VI brings together a peer reviewed selection of over 40 papers, ranging from academic research through case studies to industrial and administrative experience of interoperability. It shows how, in a scenario of globalised markets, the capacity to cooperate with other firms efficiently becomes essential in order to remain in the market in an economically, socially and environmentally cost-effective manner, and that the most innovative enterprises are beginning to redesign their business model to become interoperable. This goal of interoperability is vital, not only from the perspective of the individual enterprise but also in the new business structures that are now emerging, such as supply chains, virtual enterprises, interconnected organisations or extended enterprises, as well as in mergers and acquisitions. Establishing efficient and relevant collaborative situations requires managing interoperability from a dynamic perspective: a relevant and efficient collaboration of organizations might require adaptation to remain in line with potentially changing objectives, evolving resources, and unexpected events, for example. Many of the papers contained in this, the seventh volume of Proceedings of the I-ESA Conferences have examples and illustrations calculated to deepen understanding and generate new ideas. The I-ESA'14 Conference is jointly organised by Ecole des Mines Albi-Carmaux, on behalf of PGSO, and the European Virtual Laboratory for Enterprise Interoperability (INTEROP-VLab) and supported by the International Federation for Information Processing (IFIP). A concise reference to the state of the art in systems interoperability, Enterprise Interoperability VI will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment.

On Lneberg Heath in 1945, the German High Command surrendered to Field Marshall Montgomery; in 2015, seventy years after this historic triumph, the last units of the British Army finally left their garrisons next to Lneberg Heath. *Boots on the Ground* is the story of those years, following the British Army against the backdrop of Britain's shifting security and defence policies. From the decolonisation of India to the two invasions of Iraq, and, of course, Ireland, the book tracks the key historical conflicts, both big and small, of Britain's transformation from a leading nation with some 2 million

troops in 1945, to a significantly reduced place on the world stage and fewer than 82,000 troops in 2015. Despite this apparent de-escalation, at no point since WWII has Britain not had 'boots on the ground' - and with the current tensions in the Middle East, and the rise of terrorism, this situation is unlikely to change. Sir Richard Dannatt brings forty years of military service, including as Chief of Staff, to tell the fascinating story of how the British Army has shaped, and been shaped by, world events from the Cold War to the Good Friday Agreement. Whether examining the fallout of empire in the insurgencies of Kenya and Indonesia, the politically fraught battle for the Falklands, the long-standing conflict in Ireland or Britain's relationship with NATO and experience of fighting with - or for - America, Dannatt examines the complexity of perhaps the greatest British institution.

This book constitutes the thoroughly refereed post-conference proceedings of the 10th International Workshops on Coordination, Organizations, Institutions and Norms in Agent Systems, COIN 2014. The workshops were co-located with AAMAS 2014, held in Paris, France, in May 2014, and with PRICAI 2014, held in Gold Coast, QLD, Australia, in December 2014. The 16 full papers were carefully reviewed and selected for inclusion in this volume. The papers cover a wide range of topics from work on formal aspects of normative and team based systems, to software engineering with organisational concepts, to applications of COIN based systems, and to philosophical issues surrounding socio-technical systems. They highlight not only the richness of existing work in the field, but also point out the challenges and exciting research that remains to be done in the area.

Commentators have shown how a 'culture of security' ushered in after the terrorist attacks of 11 September 2001 has involved exceptional legal measures and increased recourse to secrecy on the basis of protecting public safety and safeguarding national security. In this context, scholars have largely been preoccupied with the ways that increased security impinges upon civil liberties. While secrecy is justified on public interest grounds, there remains a tension between the need for secrecy and calls for openness, transparency and disclosure. In law, secrecy has implications for the separation of powers, due process, and the rule of law, raising fundamental concerns about open justice, procedural fairness and human rights. Beyond the counterterrorism and legal context, scholarly interest in secrecy has been concerned with the credibility of public and private institutions, as well as the legacies of secrecy across a range of institutional and cultural settings. By exploring the intersections between secrecy, law and society, this volume is a timely and critical intervention in secrecy debates traversing various fields of legal and social inquiry. It will be a useful resource for academic researchers, university teachers and students, as well as law practitioners and policymakers interested in the legal and socio-legal dimensions of secrecy.

As a critical, in-depth analysis of the law-making process, this book has no equal. It deals with all the stages and forms of law-making: - the preparation of legislation; - its passage through Parliament; - statutory interpretation; - the operation of the rules of precedent in judicial decision-making; - the many facets of judicial law-making; - the machinery of law reform. The new eighth edition covers the operation of EU law in the UK after Brexit. It also covers pre-Brexit events such as the unprecedented legislation by backbench MPs to stop a No Deal Exit from the EU and the two great Supreme Court decisions over the triggering of Brexit and the prorogation of Parliament. The book draws on a wide range of sources including important new empirical research such as Lord Sumption's 2019 Reith lectures (Trials of the State – Law and the Decline of Politics) and the work of Sir Geoffrey Palmer, former Prime Minister and Justice Minister of New Zealand on The Law Reform Enterprise. There are new sections on the attempt to control the size of the House of Lords, on whether Parliament should have a role in the selection of senior judges and on the topical question whether decisions of the courts on constitutional questions are 'legal' or 'political'.

CEPOL aims is to bring together senior police officers from across Europe to share research and best practice, to encourage cross-border cooperation in the fight against crime and to help facilitate training and exchange programmes between European police forces. However, in March 2013, the Commission presented a proposal for a new Europol Regulation, one effect of which would have been to merge CEPOL with Europol. The Committee, the Government, the Directors of Europol and CEPOL, the European Parliament and the Council all opposed the proposed merger. A separate Regulation on CEPOL was therefore proposed. The new draft Regulation would allow CEPOL "broader objectives" and "modernised governance". The Government supports the work of CEPOL but is unhappy with a number of proposals in the Regulation, including the removal of the requirement that all attendees on CEPOL courses should be senior police officers, and the suggestion that Member States should designate a national unit to contribute to CEPOL's work programmes. The Committee points out that there are legal reasons why the UK must, at some stage, opt-in to the Regulation. It recommends that the Government to do so now, to give the UK a place at the negotiating table when the draft Regulation is discussed.

Practitioners operate in a necessary reality. We work in a space where project performance is above theory or methodology. In the best environments, delivery and an affirmative culture are what matter most. In the worst, it is politics and survival. In any environment we are challenged to adopt best practices and adapt our style to the environment in which the project is occurring. This is a book about those best practices and practitioner experiences. It is a must have reference and guide book for project managers, general managers, business leaders and project management researchers. This book is the result of the hard work and dedication of more than 35 authors from more than 15 countries across four continents. It brings a diversity of experience, professional and personal. It includes practitioners, leading academics, renowned theorists and many who straddle those roles. The chapters cover experiences in software, large scale infrastructure projects, finance and health care, to name a few. The chapters themselves take many forms. Check out the table of contents to get a deeper sense of the topics included. All provide real-world guidance on delivering high performing projects and show you how to build, lead and manage high performing teams. The Practitioners Handbook of Project Performance is complete in itself. It can also be an enticing start to an ongoing dialogue with the authors and a pleasurable path to get deeper into the subject of project performance. Find your favorite place to begin learning from these chapters, to begin taking notes and taking away nuggets to use in your everyday. But don't stop there. Contact information and further resources for this diverse team of experts authors are found throughout. The Practitioners Handbook is a modern guide to the leading edge of project performance management and a path to the future of project delivery.
