**WINNER • 2021 PULITZER PRIZE IN HISTORY Winner • 2022 James Beard Foundation Book Award [Writing]** The “stunning” (David W. Blight) untold history of how fast food became one of the greatest generators of black wealth in America. Just as *The Color of Law* provided a vital understanding of redlining and racial segregation, Marcia Chatelain’s *Franchise* investigates the complex interrelationship between black communities and America’s largest, most popular fast food chain. Taking us from the first McDonald’s drive-in in San Bernardino to the franchise on Florissant Avenue in Ferguson, Missouri, in the summer of 2014, Chatelain shows how fast food is a source of both power—economic and political—and despair for African Americans. As she contends, fast food is, more than ever before, a key battlefield in the fight for racial justice.

“Nickled and Dimed for the Amazon age,” (Salon) the bitingly funny, eye-opening story of finding work in the automated and time-starved world of hourly low-wage labor After the local newspaper where she worked as a reporter closed, Emily Guendelsberger took a pre-Christmas job at an Amazon fulfillment center outside Louisville, Kentucky. There, the vending machines were stocked with painkillers, and

the staff turnover was dizzying. In the new year, she travelled to North Carolina to work at a call center, a place where even bathroom breaks were timed to the second. And finally, Guendelsberger was hired at a San Francisco McDonald’s, narrowly escaping revenge-seeking customers who pelted her with condiments. Across three jobs, and in three different parts of the country, Guendelsberger directly took part in the revolution changing the U.S. workplace. *ON THE CLOCK* takes us behind the scenes of the fastest-growing segment of the American workforce to understand the future of work in America - and its present. Until robots pack boxes, resolve billing issues, and make fast food, human beings supervised by AI will continue to get the job done.

Guendelsberger shows us how workers went from being the most expensive element of production to the cheapest - and how low wage jobs have been remade to serve the ideals of efficiency, at the cost of humanity. *ON THE CLOCK* explores the lengths that half of Americans will go to in order to make a living, offering not only a better understanding of the modern workplace, but also surprising solutions to make work more humane for millions of Americans.

**Big Macs & Burgundy** Psychology Press Experts discuss improving job quality in low-wage industries including retail, residential construction, hospitals and long-term healthcare, restaurants, manufacturing, and long-haul trucking. Americans work harder and longer than our counterparts in other industrialized nations. Yet prosperity remains elusive to many. Workers in such low-wage industries as retail, restaurants, and home construction live from paycheck to paycheck, juggling multiple jobs with variable schedules, few benefits, and limited prospects for advancement. These bad outcomes are produced by a range of industry-specific factors, including intense competition, outsourcing and subcontracting, failure to enforce employment standards, overt discrimination, outmoded production and management systems, and inadequate worker voice. In this volume, experts look for ways to improve job quality in the low-wage sector. They offer in-depth examinations of specific industries—long-term healthcare, hospitals and outpatient care, retail, residential construction, restaurants, manufacturing, and long-haul trucking—that together account for more than half of all low-wage jobs. The book’s sector view allows the contributors to address industry-specific variations that shape operational choices about work. Drawing on deep industry knowledge, they consider important distinctions within and between these industries; the financial, institutional, and structural incentives that shape the choices employers make; and what it would take to make more jobs better jobs. Eating junk food and fast food is a great all-American passion. American kids and grownups love their candy bars, Big Macs and supersized fries, Doritos, Twinkies, and Good Humor ice cream bars. The disastrous health effects from the enormous appetite for these processed fat- and sugar-loaded foods are well publicized now. This was particularly dramatically evidenced by Super Size Me (2004), filmmaker Morgan Spurlock's 30-day all-McDonald's diet in which his liver suffered the same poisoning as if he had been on an extended alcohol binge. Through increased globalization, American popular food culture is being increasingly emulated elsewhere in the world, such as China, with the potential for similar disastrous consequences. This A-to-Z reference is the first to focus on the junk food and fast food phenomena from a multitude of angles in addition to health and diet concerns. More than 250 essay entries objectively explore the scope of the topics to illuminate the American way through products, corporations and entrepreneurs, social history, popular culture, organizations, issues, politics, commercialism and consumerism, and much more. Interest in these topics is high. This informative and fascinating work, with entries on current controversies such as mad cow disease and factory farming, the food pyramid, movie tie-ins, and marketing to children, will be highly useful for reports, research, and browsing. It takes readers behind the scenes, examining the significance of such things as uniforms, training, packaging, and franchising. Readers of every age will also enjoy the nostalgia factor, learning about the background of iconic drive-ins, the story behind the mascots, facts about their favorite candy bar, and collectables. Each entry ends with suggested reading. Besides an introduction, a timeline, glossary, bibliography, resource guide, and photos enhance the text. Attending Hamburger University, Robin Leidner observes how McDonald's trains the managers of its fast-food restaurants to standardize every aspect of service and product. Learning how to sell life insurance at a large midwestern firm, she is coached on exactly what to say, how to stand, when to make eye contact, and how to

build up Positive Mental Attitude by chanting "I feel happy! I feel terrific!" Leidner's fascinating report from the frontlines of two major American corporations uncovers the methods and consequences of regulating workers' language, looks, attitudes, ideas, and demeanor. Her study reveals the complex and often unexpected results that come with the routinization of service work. Some McDonald's workers resent the constraints of prescribed uniforms and rigid scripts, while others appreciate how routines simplify their jobs and give them psychological protection against unpleasant customers. Combined Insurance goes further than McDonald's in attempting to standardize the workers' very selves, instilling in them adroit maneuvers to overcome customer resistance. The routinization of service work has both poignant and preposterous consequences. It tends to undermine shared understandings about individuality and social obligations, sharpening the tension between the belief in personal autonomy and the domination of a powerful corporate culture. Richly anecdotal and accessibly written, Leidner's book charts new territory in the sociology of work. With service sector work becoming increasingly important in American business, her timely study is particularly welcome.

The deforestation-free movement (or "zero-deforestation") has emerged recently in a context of lower state control, globalization and pressure on corporations by nongovernmental organizations (NGOs) through consumer awareness campaigns, acknowledging the essential role of agricultural commodities in deforestation. It takes the form of commitments by corporations to ensure that the products they either produce, process, trade or retail are not linked to forest conversion. This movement has particular relevance for Indonesia. Ambitious targets have been set with concrete action on the ground, and typically go beyond forest conservation to also include peatland management and social issues. Regarding the zero-deforestation component, its implementation relies essentially on two complementary methodologies: High Conservation Value Forest (HCVF) and High Carbon Stocks (HCS).
