Our world is being revolutionized by data-

driven methods: access to large amounts of data details, ranging from scheduling to has generated new insights and opened exciting synchronization to fault tolerance. This book new opportunities in commerce, science, and focuses on MapReduce algorithm design, with computing applications. Processing the enormous quantities of data necessary for these common in natural language processing, advances requires large clusters, making information retrieval, and machine learning. distributed computing paradigms more crucial than ever. We introduce the notion of MapReduce design MapReduce is a programming model for expressing distributed computations patterns, which represent general reusable solutions to commonly occurring problems on massive datasets and an execution framework for large-scale data processing on across a variety of problem domains. This book clusters of commodity servers. The programming model provides an easy-to- not only intends to help the reader "think in understand abstraction for designing scalable MapReduce", but also discusses limitations of algorithms, while the execution framework the programming model as well. As the number of patients with diabetes increases annually, it is not surprising that the number of patients with diabetes who are admitted to the hospital also increases. Once in the hospital, patients with diabetes or hyperglycemia may be admitted to the Intensive Care Unit, require urgent or elective surgery, enteral or parenteral nutrition, intravenous insulin infusion, or therapies that significantly impact glycemic control (e.g., steroids). Because many clinical outcomes are influenced by the degree of glycemic control, knowledge of the best practices in inpatient diabetes management is extremely important. The field of inpatient management of diabetes and hyperglycemia has grown substantially in the last several years. This body of knowledge is summarized in this book, so it can reach the audience of hospitalists, endocrinologists, nurses and other team members who take care of

hospitalized patients with diabetes and hyperglycemia.

Dex has the sweetest heart and the roughest touch. He breaks his toys, has difficulty with personal space, and has an energy level that idles on high! Dex deeply desires to play with a family of baby birds, but his request is denied until he can learn to be gentle and kind. Join this misunderstood dragon as he creatively learns how to have a gentle touch. It's Tough to Be Gentle: A Dragon's Tale, helps children understand the gentle and kind concept and the Teaching Tips for Parents provides parents with information on how they can empathize with a child similar to Dex. It's Tough to Be Gentle: A Dragon's Tale is one of eight children's books designed to teach Trust Based Relational Intervention (TBRI®) principles developed by Dr. Karyn Purvis and Dr. David Cross at the Institute of Child Development. Other titles by Cindy R. Lee include: Baby Owl Lost Her Whoo & Doggie Doesn't Know "No!" Proceeds from the books are being donated to HALO Project OKC and the Institute of Child Development.

The behavior of materials at the nanoscale is a key aspect of modern nanoscience and nanotechnology. This book presents rigorous mathematical techniques showing that some very useful phenomenological properties which can be observed at the nanoscale in many nonlinear reaction-diffusion processes can be simulated and justified mathematically by means of homogenization processes when a certain critical scale is used in the corresponding framework.

Ever since its original publication in Germany in 1938, Max Schweidler's *Die Instandsetzung von Kupferstichen, Zeichnungen, Buchern usw.* has been recognized as a seminal modern text on the conservation and restoration of works on paper. This volume, based on the authoritative revised German edition of 1950, makes Schweidler's

work available in English for the first time, in a meticulously edited and annotated scholarly edition. An extensively illustrated appendix presents case studies of eleven Old Master prints that were treated using the techniques Schweidler discusses.

For Computer Systems, Computer Organization and Architecture courses in CS, EE, and ECE departments. Few students studying computer science or computer engineering will ever have the opportunity to build a computer system. On the other hand, most students will be required to use and program computers on a near daily basis. *Computer Systems: A Programmer's Perspective* introduces the important and enduring concepts that underlie computer systems by showing how these ideas affect the correctness, performance, and utility of application programs. The text's hands-on

Can We Construct a Grand Strategy to Counter Terrorism? Fifteen years after September 11, the United States still faces terror threats—both domestic and foreign. After years of wars, ever more intensive and pervasive surveillance, enhanced security measures at major transportation centers, and many attempts to explain who we are fighting and why and how to fight them, the threats continue to multiply. So, too, do our attempts to understand just what terrorism is and how to counter it. Two leaders in the field of terrorism studies, Martha Crenshaw and Gary LaFree, provide a critical look at how we have dealt with the terror threat over the years. They make clear why it is so difficult to create policy to counter terrorism. The foes are multiple and often amorphous, the study of the field dogged by disagreement on basic definitional and methodological issues, and the creation of policy hobbled by an exacting standard: the counterterrorist must succeed all the time; the terrorist only once. As *Countering Terrorism* shows, there are no simple solutions to this threat.
