Every day, thousands of South African children go to school filled with terror because they know they're going to be bullied. Children who are targeted by bullies are at enormous risk, yet many parents don't know why it is happening to their child, or what to do about it. Bully-proof looks at every aspect of bullying, from name-calling, taunting and rumour-mongering to physical assault, and examines why and how bullies behave the way they do, and what can be done to help them and their victims. The more we understand bullying behaviour, the better we can address the underlying causes and put effective controls in place. Studies have shown that the 'whole school' approach, involving pupils, teachers and parents, is by far the most effective method of reducing incidents of bullying, as well as limiting the potential for future incidents. Implementing

an effective anti-bullying campaign is not just about changing the behaviour of a few maladjusted children; it is about changing the philosophy of the entire school. Using a step-by-step approach, this book provides educators, parents, counsellors and children with the tools they need to develop a successful anti-bullying programme.

Since the year 2000, there have been approximately 200 school shootings in the United States. Unfortunately, this is not simply a U.S. problem. In 2017, a 15-year-old Canadian male student committed suicide after shooting two other students and a teacher. During that same year, in

Brazil, a private school student fatally shot two classmates and injured four. In 2018, a 13-year-old Russian girl opened fire with a gas pistol and injured seven 7th graders. Hence, school violence is a problem of global concern. Acts of School Violence in the School Setting addresses this international problem from a crime and criminal justice perspective. The history of school violence follows the pattern of what most would consider the history of education. According to the U.S. Department of Justice, current research has shown a decline in the rates of school violence over the past three years; however, the few high-profile cases broadcast repeatedly in the media lead the public to other conclusions. All individuals agree that a child attending school should be concerned with the process of learning, not with avoiding victimization and that the school environment should be a safe and secure location for both students and teachers. In addition, and most central to this text, without a safe school environment, students and teachers may be assaulted, injured, or killed. Included in this textbook are definitions related to the types and categories of school violence (including bullying, stalking, and crimes against students that involve the internet), discussions on victims and offenders, and case examples. Also included in this textbook is information on criminal justice system responses to school violence from both a national and international perspective. Finally, this textbook discusses adult perpetrators of school violence and the explanations for such attacks.

Preventing Bullying Through Science, Policy, and Practice Univ of California Press

From the beginning of 2000, with the increase and diffusion of modern technologies, a new form of bullying using electronic means has emerged. Literature has reached some consistent findings on the description of the problem. However, there is still a lack of knowledge about developmental processes of cyberbullying and about possible predictors and correlates. Some of the main emerging areas investigated in connection with cyberbullying are: personality factors, callous unemotional traits and self-control, memory cognitive distortions, emotional and moral mechanisms, ICT use and media exposure, family and social contexts. Another important issue is the relation between cyberbullying and face to face bullying. From face to face literature we know some of the mechanisms in the peer group such as the relation between bullying, dominance and popularity and the role of bystanders in the social dynamic of the attacks. However, nothing is known about the cyber community. Contributors to this volume attempt to investigate these group mechanisms in the cyber community. Finally, for the victims, long-term consequences are also relevant, both in terms of perceived stress level and of the association between cyber-victimization and mental health. This special issue offers important new findings on the development and consequences of cyberbullying and cyber-victimization, and opens new and future directions of research.

This book looks in depth at the emerging issue of cyber-bullying. In this increasingly digital world cyber-bullying has emerged as an electronic form of bullying that is difficult to monitor or supervise because it often occurs outside the physical school setting and outside school hours on home computers and personal phones. These web-based and mobile technologies are

providing young people with what has been described as: 'an arsenal of weapons for social cruelty'. These emerging issues have created an urgent need for a practical book grounded in comprehensive scholarship that addresses the policy-vacuum and provides practical educational responses to cyber-bullying. Written by one of the few experts on the topic *Cyber-Bullying* develops guidelines for teachers, head teachers and administrators regarding the extent of their obligations to prevent and reduce cyber-bullying. The book also highlights ways in which schools can network with parents, police, technology providers and community organizations to provide support systems for victims (and perpetrators) of cyber-bullying. *Analysing Psychosocial and Contextual Factors Underpinning Bullying and Cyberbullying* Routledge
