and globalization and how it affects politics. Covering all subareas of the field with both theoretical orientations and empirical studies, it directly connects scholars with current research in the field. A total reconceptualization of the first edition, the new handbook features nine additional chapters and highlights the impact of the media and big data.

*The Russian Military in Contemporary Perspective* Cambridge University Press

This book presents several essays analyzing Russia's extensive nuclear agenda and the issues connected with it. It deals with strategy, doctrine, European, Eurasian, and East Asian security agendas, as well as the central U.S.-Russia nuclear and arms control equations. This work brings together American, European, and Russian analysts to discuss Russia's defense and conventional forces reforms and their impact on nuclear forces, doctrine, strategy, and the critical issues of Russian security policies toward the United States, Europe, and China. It also deals directly with the present and future roles of nuclear weapons in Russian defense policy and strategy.

The Collector's Price and Reference Guide Univ of California Press

Rose Gottemoeller, the US chief negotiator of the New START treaty-and the first woman to lead a major nuclear arms negotiation-delivers in this book an invaluable insider's account of the negotiations between the US and Russian delegations in Geneva in 2009 and 2010. It also examines the crucially important discussions about the treaty between President Barack Obama and President Dmitry Medvedev, and it

describes the tough negotiations Gottemoeller and her team went through to gain the support of the Senate for the treaty. And importantly, at a time when the US Congress stands deeply divided, it tells the story of how, in a previous time of partisan division, Republicans and Democrats came together to ratify a treaty to safeguard the future of all Americans. Rose Gottemoeller is uniquely qualified to write this book, bringing to the task not only many years of high-level experience in creating and enacting US policy on arms control and compliance but also a profound understanding of the broader politico-military context from her time as NATO Deputy Secretary General. Thanks to her years working with Russians, including as Director of the Carnegie Moscow Center, she provides rare insights into the actions of the Russian delegation-and the dynamics between Medvedev and then-Prime Minister Vladimir Putin. Her encyclopedic recall of the events and astute ability to analyze objectively, while laying out her own thoughts and feelings at the time, make this both an invaluable document of record-and a fascinating story. In conveying the sense of excitement and satisfaction in delivering an innovative arms control instrument for the American people and by laying out the lessons Gottemoeller and her colleagues learned, this book will serve as an inspiration for the next generation of negotiators, as a road map for them as they learn and practice their trade, and as a blueprint to inform the shaping and ratification of future treaties. This book is in the Rapid Communications in Conflict and Security (RCCS) Series (General Editor: Dr. Geoffrey R.H. Burn) and has received much praise, including: "As advances in technology usher in a new age of weaponry, future negotiators would benefit from reading Rose Gottemoeller's memoir of the process leading to the most significant arms control agreement of recent decades." —Henry Kissinger, former U.S. Secretary of State

---

“ Rose Gottemoeller ’ s book on the New START negotiations is the definitive book on this treaty or indeed, any of the nuclear treaties with the Soviet Union or Russia. These treaties played a key role in keeping the hostility between the United States and the Soviet Union from breaking out into a civilization-ending war. But her story of the New START negotiation is no dry academic treatise. She tells with wit and charm the human story of the negotiators, as well as the critical issues involved. Rose ’ s book is an important and well-told story about the last nuclear treaty negotiated between the US and Russia. ” —William J. Perry, former U.S. Secretary of Defense “ This book is important, but not just because it tells you about a very significant past, but also because it helps you understand the future. ” — George Shultz, former U.S. Secretary of State  
The Shadow World CreateSpace

In this straightforward exploration of core problems facing humanity, Harold Saunders outlines how concerned citizens can bring about social and political change. Using examples from the U.S. to South Africa, Tajikistan to China, this book is full of real stories of how building 'relationship' among people can empower citizens outside government.

In the wake of a divisive referendum, the people of the GDR are struggling to find common ground. Concerned that populist leader, Klaus Kaminsky, is poised to take power in East Germany, Karo and Martin come together again to defend the grassroots democracy they are helping to build. But as Kaminsky holds rallies across the country, the mood of the people of the GDR begins to change. Can the delicate balance of round tables and

workers ’ councils survive, or will the country be dragged back into the authoritarian rule of the past?

The second edition of the highly acclaimed Wind Power in Power Systems has been thoroughly revised and expanded to reflect the latest challenges associated with increasing wind power penetration levels. Since its first release, practical experiences with high wind power penetration levels have significantly increased. This book presents an overview of the lessons learned in integrating wind power into power systems and provides an outlook of the relevant issues and solutions to allow even higher wind power penetration levels. This includes the development of standard wind turbine simulation models. This extensive update has 23 brand new chapters in cutting-edge areas including offshore wind farms and storage options, performance validation and certification for grid codes, and the provision of reactive power and voltage control from wind power plants. Key features: Offers an international perspective on integrating a high penetration of wind power into the power system, from basic network interconnection to industry deregulation; Outlines the methodology and results of European and North American large-scale grid integration studies; Extensive practical experience from wind power and power system experts and transmission systems operators in Germany, Denmark, Spain, UK, Ireland, USA, China and New Zealand; Presents various wind turbine designs from the electrical perspective and models for their simulation, and discusses industry standards and world-wide grid codes, along with power quality issues; Considers concepts to increase penetration of wind power in power systems, from wind turbine, power plant and power system redesign to smart grid and storage solutions. Carefully edited for a highly coherent

---

structure, this work remains an essential reference for power system engineers, transmission and distribution network operator and planner, wind turbine designers, wind project developers and wind energy consultants dealing with the integration of wind power into the distribution or transmission network. Up-to-date and comprehensive, it is also useful for graduate students, researchers, regulation authorities, and policy makers who work in the area of wind power and need to understand the relevant power system integration issues.

F.Y.E.O. Routledge

Much has been written in the West on the history of the Soviet space program but few Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoirs of Academician Boris Chertok, translated from the original Russian, fills that gap. Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Twenty-seven years later, he became deputy to the founding figure of the Soviet space program, the mysterious "Chief Designer" Sergey Korolev. Chertok's sixty-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, *Rockets and People*. In these writings, spread over four volumes, Academician Chertok not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society's quest to explore the cosmos. In Volume 1, Chertok describes his early years as an engineer and ends with the mission to Germany after the end of World War II when the Soviets captured Nazi missile technology and expertise. Volume 2

takes up the story with the development of the world's first intercontinental ballistic missile (ICBM) and ends with the launch of Sputnik and the early Moon probes. In Volume 3, Chertok recollects the great successes of the Soviet space program in the 1960s including the launch of the world's first space voyager Yuriy Gagarin as well as many events connected with the Cold War. Finally, in Volume 4, Chertok meditates at length on the massive Soviet lunar project designed to beat the Americans to the Moon in the 1960s, ending with his remembrances of the Energiya-Buran project. NASA SP-2005-4110.

An award-winning cultural history of how we experience the world through art, film and architecture *Atlas of Emotion* is a highly original endeavor to map the cultural terrain of spatio-visual arts. In an evocative blend of words and pictures, Giuliana Bruno emphasizes the connections between "sight" and "site" and "motion" and "emotion." In so doing, she touches on the art of Gerhard Richter and Louise Bourgeois, the filmmaking of Peter Greenaway and Michelangelo Antonioni, media archaeology and the origins of the museum, and her own journeys to her native Naples. Visually luscious and daring in conception, Bruno's book opens new vistas and understandings at every turn.

A Blueprint for the Citizens' Century CreateSpace

"The chapters included in this volume all come from an international conference on the Russian military that aimed to examine the Russian military establishment as much as possible, including its domestic developments, the ability of Russia's economy, and in particular, its

---

science and technology sectors. Given the ongoing aggressiveness of the Russian military, this effort to present an all-encompassing look at it is not only essential reading but also quite unique in the existing literature" -- Publisher's web site.

A Little Corner of Freedom John Wiley & Sons

Soon to be a Major PBS Documentary Event The Shadow World is the harrowing behind-the-scenes tale of the global arms trade, revealing the deadly collusion that all too often exists among senior politicians, weapons manufacturers, felonious arms dealers, and the military—a situation that compromises our security and undermines our democracy. Pulling back the curtain on this secretive world, Andrew Feinstein reveals the corruption and the cover-ups behind a range of weapons deals, from the largest in history—between the British and Saudi governments—to the guns-for-diamonds deals in Africa and the imminent \$60 billion U.S. weapons contract with Saudi Arabia. He exposes in forensic detail both the formal government-to-government trade in arms and the shadow world of illicit weapons dealing, and lays bare the shockingly frequent links between the two. Drawing on his experience as a member of the African National Congress who resigned when the ANC refused to launch a corruption investigation into a major South African arms deal, Feinstein illuminates the impact this network has not only on conflicts around the world but also on the democratic institutions of the United States and the United Kingdom. Based on pathbreaking reporting and unprecedented access to top-secret information and major players in this clandestine realm, The Shadow World places us in the midst of the arms trade's dramatic wheeling and dealing—from corporate boardrooms to seedy out-of-the-way hotels—and reveals the profound danger and enormous

financial cost this network represents to all of us.

The Soviet Space Shuttle Cambria Press

At a time when crime scene television shows are all the rage amongst the civilian population, knowledge of firearm forensics is of paramount importance to crime scene analysts, police detectives, and attorneys for both the prosecution and the defense. Cartridges and Firearm Identification brings together a unique, multidisciplinary approach to quest

The Current Digest of the Soviet Press McFarland

The world is currently undergoing an historic energy transition, driven by increasingly stringent decarbonisation policies and rapid advances in low-carbon technologies. The large-scale shift to low-carbon energy is disrupting the global energy system, impacting whole economies, and changing the political dynamics within and between countries. This open access book, written by leading energy scholars, examines the economic and geopolitical implications of the global energy transition, from both regional and thematic perspectives. The first part of the book addresses the geopolitical implications in the world's main energy-producing and energy-consuming regions, while the second presents in-depth case studies on selected issues, ranging from the geopolitics of renewable energy, to the mineral foundations of the global energy transformation, to governance issues in connection with the changing global energy order. Given its scope, the book will appeal to researchers in energy, climate change and international relations, as well as to professionals working in the energy industry.

This absorbing book describes the long development

---

of the Soviet space shuttle system, its infrastructure and the space agency ' s plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA ' s Shuttle fleet.

Energiya-Buran Springer Nature

From 1978 to 1993, the renowned Soviet "paper architects" Alexander Brodsky and Ilya Utkin created an incredible collection of elaborate etchings depicting outlandish, often impossible, buildings and cityscapes. Funny, cerebral, and deeply human, their obsessively detailed work layers elements borrowed from Egyptian tombs, Ledoux's visionary architecture, Le Corbusier's urban master plans, and other historical precedents in etchings of breathtaking complexity and beauty. Back by popular demand following the sold-out original 1991 edition and 2003 reprint, Brodsky & Utkin presents the sum of the architects' collaborative prints and adds new material, including an updated preface by the artists' gallery representative, Ron Feldman, a new introductory essay by architect Aleksandr Mergold, visual documentation of the duo's installation work, and rare personal photographs.

The U.S. Army in Europe, 1951-1962 Gun Digest Books

Your One-Volume Guide to Collectible Military Firearms! It's Standard Catalog of Military Firearms, 6th Edition! If you collect military firearms, your best insurance policy is to know what you're collecting and how much it's worth. There's no better source of this knowledge than the updated, revised 6th edition of Phillip Peterson's Standard Catalog of Military

Firearms. From handguns to rifles to shotguns and fully-automatic machineguns and submachineguns, Standard Catalog of Military Firearms provides a remarkable complete guide to the world's military firearms and their accessories. It's all here: Detailed descriptions and values for the world's military firearms, from Argentina to Yugoslavia Descriptions and values for related accessories including clips, magazines, bayonets and holsters All-new entries for antique, pre-cartridge era military firearms And much more! Protect yourself! Don't pay too much for military firearms—or sell for too little! Know what your collection is worth with Standard Catalog of Military Firearms, 6th edition!

Military Nanotechnology Springer Science & Business Media With revolutionary changes in nanotechnology (NT) now on the horizon, many countries have started major research and development (R&D) programmes, which are mainly civilian. Often overlooked are military R&D programmes – in particular those of the US government. This is the first systematic and comprehensive presentation of the potential military applications of NT. In ten to twenty years, these applications may include extremely small computers, robots, missiles, satellites, launchers and sensors. They may also provide lighter and stronger materials for vehicles and weapons, implants in soldiers ' bodies, metal-free firearms, autonomous fighting systems, and smaller chemical and biological weapons. These potential uses raise strong concerns. This assessment is made from a viewpoint of international security, considering the new criteria of dangers for arms control and the international law of warfare, dangers for stability through potential new arms races and proliferation, and dangers for humans and society. Some military applications, such as computers, will be so close to civilian uses that limits are impractical. Others, such as sensors for biological-warfare

---

agents, may contribute to stronger protection against terrorist attacks and better verification of compliance with arms-control treaties. For preventive limitation of these new technologies, specific approaches are proposed that balance positive civilian uses and take into account verification of compliance, with a view to international peace and security, not national military strength. This book will be of great interest to scholars of military technology, non-lethal weapons, disarmament and security studies in general.

A Review of Modern Handguns, Submachine Guns, Personal Defense Weapons, Carbines, Assault Rifles, Sniper Rifles, Anti-Materiel Rifles, Machine Guns, Combat Shotguns, Grenade Launchers and Other Weapons Systems Princeton Architectural Press

This open access book describes modern applications of computational human modeling with specific emphasis in the areas of neurology and neuroelectromagnetics, depression and cancer treatments, radio-frequency studies and wireless communications. Special consideration is also given to the use of human modeling to the computational assessment of relevant regulatory and safety requirements. Readers working on applications that may expose human subjects to electromagnetic radiation will benefit from this book's coverage of the latest developments in computational modelling and human phantom development to assess a given technology's safety and efficacy in a timely manner. Describes construction and application of computational human models including anatomically detailed and subject specific models; Explains new practices in computational human modeling for neuroelectromagnetics,

electromagnetic safety, and exposure evaluations; Includes a survey of modern applications for which computational human models are critical; Describes cellular-level interactions between the human body and electromagnetic fields.
