BIOLOGY LAB CLONING PAPER PLASMID ANSWER PDF

In this exercise you will use paper to simulate the cloning of a gene from one organism into a bacterial plasmid using a restriction enzyme digest. The plasmid (puc18 plasmid) can then be used to transform bacteria so that it now expresses a new gene and produces a new protein.

The E. coli Insulin Factory BACKGROUND Bacteria have not only their normal DNA, they also have pieces of circular DNA called plasmids. Plasmids are a wonderfully ally for biologists who desire to get bacteria to produce very specific proteins. The plasmids conveniently can be cut, fused with other DNA and then reabsorbed by bacteria.

Paper Plasmid And Transformation Activity

Many bacteria contain plasmids, small independent DNA fragments that carry specific pieces of genetic information, such as resistance to specific antibiotics or other genetic characteristics. Plasmids can be transmitted from one bacterium to another, or from the environment into a host bacterium, a process called transformation.
