Understanding School Bullying Psychology Press

"Bullying is a serious issue that is common in schools everywhere. It can have lasting impact on students physically and emotionally. Bullying is done for the purpose of self-promotion, entertainment, and elevating one's own social status through power and control. There are three roles within bullying: the bully, the bullied, and the bystander. The purpose of this thesis is to explore the different roles of bullying and examine strategies that have been effective in schools to bring awareness to and stop bullying. This paper reviews effective proactive and reactive strategies to bullying that have been utilized by secondary schools throughout the world. It provides a resource to schools of effective and proven strategies to prevent or stop bullying with a focus on the middle and secondary grade levels. A positive school climate starts with administration that are supportive and connect with staff and students. When staff have support, they feel positive and motivated. When staff and students connect emotionally, it builds a culture of togetherness. School staff can influence students to a certain extent to stop bullying if they have a positive relationship with the students and by implementing a supportive culture in their school and providing tools to students. When students feel supported and safe, they will be more prone to defend and report instances of bullying. The higher the rate of support, the bullying incidents will decrease, which benefits the school and community. There has been a great deal of research on the bully, including identifying the bully and why they bully. A pioneering researcher, Olweus, started researching bullying in the 1970s. Olweus concluded that the social environment of a school is crucial to ending bullying. His research and bully prevention program is well known nationwide because it has been effective in reducing bullying in schools. His program is focused on training staff and students to become active in the process of identifying and creating a no-bully school environment. When staff and students are trained to identify and defend against bullying, the bystanders become defenders, and bullying decreases as a result of the supportive school culture."--leaf 4.

Bullying is a socially and culturally complex phenomenon that until now has largely been understood in the context of the individual. This book challenges the dominance of this approach, examining the processes of extreme exclusion that are enacted in bullying - whether at school, through face-to-face meetings or virtual encounters - in the context of group dynamics. Contributors draw upon qualitative empirical studies,

mixed methods and statistics, to analyse the elements that allow bullying to emerge - the processes that produce exclusion and contempt, and the relations between children, teachers and parents. Introducing a new definition of bullying, this book goes on to discuss directions for future research and action, including more informed intervention strategies and re-thinking methods of prevention. Exploring bullying in the light of the latest research from a wide variety of disciplines, this book paves the way for a new paradigm through which to understand the field.

Master's Thesis from the year 2016 in the subject Pedagogy - School System, Educational and School Politics, grade: 9/B, University of Sarajevo (University of Sarajevo and University of Bologna - Center for Interdisciplinary Studies), course: Human rights and Democracy, language: English, abstract: The issue discussed in this paper is the problem of school bullying at primary schools in the Republic of Serbia as it is proven to grow as an increasing phenomenon. Specifically, attention is given to anti-bullying practices in primary schools in order to analyze if children are free from violence, abuse and neglect. The central research question of the research is why bullying is an issue in Serbia and what the responsiveness of public authorities tackling this issue is, therefore including the accountability of primary schools in Serbia, the responsibility of the educational system for tackling bullying, the measures implemented by teachers/educators. To answer these questions, the paper presents the international and national legislative framework, a theoretical discussion of bullying as a socio-cultural phenomenon, together with a list of key events which stirred the general public and a survey. The study concludes that bullying is an issue in contemporary Serbia because of overall socio-economic conditions in Serbia, lack of expert associates within schools, inadequate prevention and intervention measures, and necessary amendments of the current legislation. Also, the research confirms the initial hypothesis by which current anti-bullying practices in primary schools in Serbia do not stand for effective response and adequate measures to prevent and reduce school bullying.
