*Self-Esteem* Springer Science & Business Media  
First published in 1988. The mounting concern in schools over widespread failure in academic achievement, greater disaffection in children and the lack of confidence in many school leavers are highlighted by the difficulties experienced by children who have special educational needs. Within this group the importance of the child's evaluation of him or herself - i.e. self-esteem - is a neglected issue. This book investigates how the level of self-esteem appears to influence social behaviour and school performance in children with special educational needs. It discusses the practical steps that can be taken to assess and enhance self-esteem in children with special needs and evaluates their effectiveness. The author emphasises the discrepancy between the performance of children who have special educational needs in ordinary classrooms with that achieved in special settings. He argues that the negative impact on a child's self-esteem created by placing him/her in an ordinary classroom may outweigh the benefits of greater integration. A full and informative treatment of both the theoretical and practical implications of a neglected

subject, this text book is suitable for experienced special educational needs teachers and those undergoing teacher training, as well as psychologists with an academic interest in the self-concept or a professional involvement in assessing children.

### The Self-Concept Springer Science & Business Media

This volume brings together internationally known researchers representing different theoretical perspectives on students' self-regulation of learning. Diverse theories on how students become self-regulated learners are compared in terms of their conceptual origins, scientific form, research productivity, and pedagogical effectiveness. This is the only comprehensive comparison of diverse classical theories of self-regulated learning in print. The first edition of this text, published in 1989, presented descriptions of such differing perspectives as operant, phenomenological, social learning, volitional, Vygotskian, and constructivist theories. In this new edition, the same prominent editors and authors reassess these classic models in light of a decade of very productive research. In

addition, an information processing perspective is included, reflecting its growing prominence. Self-regulation models have proven especially appealing to teachers, coaches, and tutors looking for specific recommendations regarding how students activate, alter, and sustain their learning practices.

Techniques for enhancing these processes have been studied with considerable success in tutoring sessions, computer learning programs, coaching sessions, and self-directed practice sessions. The results of these applications are discussed in this new edition. The introductory chapter presents a historical overview of research and a theoretical framework for comparing and contrasting the theories described in the following chapters, all of which follow a common organizational format. This parallel format enables the book to function like an authored textbook rather than a typical edited volume. The final chapter offers an historical assessment of changes in theory and trends for future research. This volume is especially relevant for students and professionals in educational psychology, school psychology, guidance and counseling, developmental psychology, child and family development, as well as for students in general teacher education.
