Politics, Geography and Social Stratification Mittal Publications
Volume 20 of "Research in Social Stratification and Mobility" continues to remain at the forefront of the diverse group of social scientists who

study social inequality and is now the official publication of the Social Stratification Research Group of the International Sociological Association (RC-28). This issue features a comprehensive retrospective on the 40 years of contributions to social stratification research made by the late William Sewell and the Wisconsin Longitudinal Survey, including an all-inclusive bibliography of publications. Other contributions address the growing differences between workers with full-time jobs and various categories of the underemployed (in Israel, the United States and Germany),

social mobility in Korea and Sweden, subjective responses to social inequality and the social consequences of status inconsistency, and analyses of class consciousness and growing wealth inequality in the OECD. Changing European Academics University of Pittsburgh Pre The questions raised by a study of class and inequality are important, but often complex. This book succeeds in making them understandable without oversimplifying, and its breadth, originality, and easy style will appeal to a

wide readership. Peter Saunders covers theories of social class as well as evidence on class inequalities in the contemporary period. He analyses why class inequalities exist, whether they are inevitable, whether they are unjust, and how they are changing. The analysis is comprehensive and up-to-date and includes information on how the distribution of wealth and income and social mobility chances have been changing during the Thatcher years. It also

explores how the class structure is being affected by developments such as the spread of privatization and individual shareholdings, the rise of the 'yuppies', and the emergence of an underclass. On the theoretical side Professor Saunders gives equal weight to marxist, social-democratic, and neo-liberal perspectives on class and inequality, and writers as diverse as Karl Marx, John Rawls, and Friedrich Hayek all receive serious and balanced consideration. From Origin to

Destination Routledge Social Stratification in Contemporary China raises and debates major sociological issues of modern and present-day China from a historical perspective. Such topics as "equality and inequality" and "acceptability of defined inequality" have been dealt with in a broad historical context since 1949 when the People's Republic was founded. The work is widely accepted as one of the most important studies

trying to clarify the difficult perceptions of policy of reform and opening up that was formulated and implemented in the early 1980s in China. Professor Li Qiang is one of the leading sociologists in China.

Social Stratification and Economic Change

Routledge

In this book, Franklin Obeng-Odoom seeks to carefully explain, engage, and systematically question the existing explanations of inequalities within Africa and between Africa and the rest

of the world using insights from the emerging field of stratification economics. Drawing on multiple sources - including archival and historical material and a wide range of survey data - he develops a distinctive approach that combines key concepts in original institutional economics, such as reasonable value, property, and the distribution of

wealth, with other insights into Africa's development and underdevelopment. While looking at the Africa-wide situation, Obeng-Odoom also analyzes the experiences of inequalities within specific countries. Comprehensive and engaging, *Property, Institutions, and Social Stratification in Africa* is a useful resource for teaching and research on Africa and the Global

South.

Trends and Processes

Routledge

This book looks at how sociological concepts that were first 'invented' and applied to describe social inequality in Europe were also used to understand and explain inequality in the United States. However, under very different circumstances and conditions the concepts needed to be adjusted - either

through changing their precise meaning or by using related concepts. In *Concepts of Social Stratification* the author tries to analyse this change by looking at how some of the most prominent American sociologists have tried to conceptualise their own society while at the same time addressing the complex relationship between an assumed

political equality and de facto social inequality. *Social stratification and development in the Mediterranean Basin* Routledge

Class, Race, And Gender In Sociological Perspective Walter de Gruyter GmbH & Co KG
Research into social

stratification and social divisions has always been a central component of sociological study. This volume brings together a range of thematically organised case-studies comprising empirical and methodological analyses addressing the challenges of studying trends and processes in social stratification. This collection has four themes. The first concerns the measurement of social stratification, since the problem of relating

concepts, measurements and operationalizations continues to cause difficulties for sociological analysis. This book clarifies the appropriate deployment of existing measurement options, and presents new empirical strategies of measurement and interpretation. The conception of the life course and individual social biography is very popular in modern sociology. The second theme of this volume exploits the contemporary expansion

of micro-level longitudinal data and the analytical approaches available to researchers to exploit such records. It comprises chapters which exemplify innovative empirical analysis of life-course processes in a longitudinal context, thus offering an advance on previous sociological accounts concerned with longitudinal trends and processes. The third theme of the book concerns the interrelationship

between contemporary demographic, institutional and socioeconomic transformations and structures of social inequality. Although the role of wider social changes is rarely neglected in sociological reviews, such changes continue to raise analytical challenges for any assessment of empirical differences and trends. The fourth theme of the book discusses selected features of policy and political responses to social stratification.

This volume will be of interest to students, academics and policy experts working in the field of social stratification.

The following types of questions and debates are addressed in the six sections of the reader: 1. Is stratification inevitable? Do the recent "experiments with destratification in Eastern Europe and elsewhere provide new insights into the functionalist theory of inequality? 2. Can we identify a set of organized and cohesive "social classes" in advanced industrial societies? Does it make sense to refer to a ruling class, a "political class," or a "power elite" in these societies? 3. Are the basic contours of occupational mobility the same within all advanced industrial societies? Have the "new structuralists" led us astray in our attempts to understand the sources and causes of occupational attainment? 4. Are there fundamental differences across social classes in styles of life, patterns of consumption, and attitudes toward work? Are these "class-specific cultures" attenuating as we move into advanced industrialism? 5. Is there an emerging underclass in America? What are the principal sources of racial, ethnic, and gender

inequality?6. Can we identify a "teleological dynamic" driving the development of stratification systems? Are new forms of stratification and inequality emerging as Eastern Europe enters its postsocialist stage?The volume offers essential reading for undergraduates who need an introduction to the field, for graduate students who wish to broaden their understanding of stratification research, and for advanced scholars who

seek a basic reference guide. Although most of the selections are middle-range theoretical pieces suitable for introductory courses, the anthology also includes advanced contributions on the cutting edge of research. The editor outlines a modified study plan for undergraduate students requiring a basic introduction to the field.

Trends and Mechanisms in Social Stratification

Research : Essays in Honour of Walter Müller John Wiley & Sons

The major themes explored in this book, originally published in 1986, are the political resonances of social stratification and change; the growing distance between the working class and the providers of social services; and the role of locality in social reproduction. The relationship

between society and space is the subject of a major debate in developed countries. The key questions are about just how far spatial patterns and local conditions affect social relations and stratification and how far they shape collective action, electoral responses and class.

Social Class and Stratification John Wiley & Sons
Research in Social Stratification and

Mobility continues its tradition of publishing the best and most innovative research on the changing landscape of social inequality the world over. This issue focuses on different dimensions of social closure and their relationship to social inequality processes, including the changing role that education plays in sorting people into favorable and unfavorable labor market positions across a global diversity of cultural settings. This issue also examines the fluid boundaries of race and ethnicity in contentious political settings, relationships between attitudes and collective action, and the role that technology and political context plays in promoting economic development and well-being. These topics and the research methodologies they represent display the vitality of social science research dealing with social stratification and the wide array of methods,

contexts, and policies that directly affect the life chances of most of the world's peoples. This issue also marks a continuation of the ties developed between RSSM and the Social Stratification and Mobility section of the International Sociological Association (RC-28). This collaboration promises to promote and disseminate social inequality research throughout the world through an established network of

distinguished international contributors and commentators.

This book assembles classic and contemporary articles representing the major sociological approaches to understanding social inequality. Although there are various competing texts covering issues of social inequality, this book is the only comprehensive source of classic and contemporary articles that have defined and redefined the

This text examines the structure of stratification in the United States, focusing on the way one's class location influences his or her life opportunities. Beeghly uses three themes to illustrate social stratification: How power influences the distribution of resources in the United States; how social structure influences rates of events; and how social psychological factors
