Supplementary Papers from the Conference on Youth Unemployment, Its Measurement and Meaning

Brookings Institution Press

The crisis has intensified what was previously a chronic unemployment problem in Europe; youth unemployment is now at unprecedented highs in some European countries. This paper assesses the main drivers of youth unemployment in Europe. It finds that much of the increase in youth unemployment rates during the crisis can be explained by output dynamics and the greater sensitivity of youth

unemployment to economic activity than adult unemployment. Labor market institutions also play a significant role in explaining the persistently high levels of youth unemployment, especially the tax wedge, minimum wages relative to the median wage, spending on active labor market policies, the opportunity cost of working (measured by the unemployment benefits), vocational training, and labor market duality. This suggests that policies to address youth unemployment should be comprehensive and country-specific, focused on reviving growth and advancing labor market reforms.

Economics Working Papers M.E. Sharpe

In the mid-1980s the world's industrialised economies entered their second decade of stagnant growth and mass unemployment paralleled only by the Great Slump. Neo-conservative policies, which replaced traditional Keynesian remedies, have been no more successful in halting the inexorable increase in unemployment: the stigma of failure to deal with unemployment has touched governments of all political extractions from Conservative to Liberal to Social-Democratic. New perspectives on the unemployment problem are needed and this book provides them.

Unemployment Insurance in the United States Greenwood

Root and Park examine the plight of workers displaced from two paper mills and their paths to reemployment, retirement decisions, and the personal struggles they faced as a result of their dislocations. They provide insightful, personal portraits of workers that are representative of the hundreds who lost their jobs as a result of two mill closings—one in Sartell, Minnesota, and the other in Bucksport, Maine. In addition, the authors describe the types of assistance that were offered to the workers displaced by the mill closings, dedicate a chapter each to the plights of female workers and of spouses who were both displaced by the closings, discuss the importance of community when economic displacement occurs, compare the experience of a mill closing in Canada with the Maine and Minnesota closings, and conclude with ways that society can be more proactive in assisting workers who suffer job displacement and the economic and psychological impacts that so often occur as a result. Overall, this book adds a human perspective to the problems facing dislocated workers, not only in the shrinking paper industry but also in other contracting industries in the United States.

High and persistent unemployment rates in Europe during the eighties gave rise to a lively discussion about the nature and causes of joblessness. Among other sources structural unemployment was blamed for the lack of response of unemployment to increasing aggregate demand. Renewed attention was thus devoted to an analysis of the magnitude and the development of structural unemployment as well to its possible determinants. In this literature, the Beveridge curve experienced a resurrection and, at first

glance, it seemed to be an appropriate tool to analyse the aforementioned issues. However, it was soon recognized that the Beveridge curve, i. e. the relation between unemployment and vacancies, was anything but stable, thus requiring a careful distinction between dynamic loops around a (stable?) long-run Beveridge curve and possible shifts due to, say, an increasing mismatch between labor supplied and demanded. The controversy is far from being settled at the time of this writing. This book contains a collection of hitherto unpublished papers which are devoted to a theoretical and econometric analysis of structural unemployment. The papers put considerable emphasis on the question to what extent the Beveridge curve can serve as an adequate tool for such studies. The countries under consideration are Germany and Austria. In what follows a very brief summary of each paper will be outlined. Franz and Siebeck present, at some length, a theoretical and econometric analysis of the Beveridge curve in Germany.

Papers on Employment and Unemployment in Ohio Routledge

The 15 papers collected in this book encompass important macroeconomic theories and policies espoused by 1996 Nobel laureate economist William S. Vickrey and his associates. Vickrey wrote a number of papers in the last few years of his life elucidating his "commitment to full employment" as a prerequisite for a decent standard of living for all. Drawing on the foundation of Vickrey's work, the contributors expand and elaborate on issues relative to full employment theory and policy, and on related macro-policy issues.
