A New Translation From The French By Marion Wiesel Born in Sighet, Transylvania, Elie Wiesel was a teenager when he and his family were taken from their home in 1944 and deported to the Auschwitz concentration camp, and then to Buchenwald. Night is the terrifying record of Elie Wiesel's memories of the death of his family, the death of his own innocence, and his despair as a deeply observant Jew confronting the absolute evil of man.

This new translation by his wife and most frequent translator, Marion Wiesel, corrects important details and presents the most accurate rendering in English of Elie Wiesel's seminal work.

Computer Algebra in Scientific Computing Center for Applied Research in With its flexibility for programming both small and large projects, Scala is an ideal language for teaching beginning programming. Yet there are no textbooks on Scala currently available for the CS1/CS2 levels.

Introduction to the Art of Programming Using Scala presents many concepts from CS1 and CS2 using a modern, JVM-based language that works well for both programming in the small and programming in the large. The book progresses from true

programming in the small to more significant projects later, leveraging the full benefits of object orientation. It first focuses on fundamental problem solving and programming in the small using the REPL and scripting environments. It covers basic logic and problem decomposition and explains how to use GUIs and graphics in programs. The text then illustrates the benefits of object-oriented design and presents a large collection of basic data structures showing different implementations of key ADTs along with more atypical data structures. It also introduces multithreading and networking to provide further motivating examples. By using Scala as the language for both CS1 and CS2 topics, this textbook gives students an easy entry into

programming small projects as well as a firm foundation for taking on larger-scale projects. Many student and instructor resources are available at www.programmingusingscala.net Research & Education Assoc. This book discusses the principles of learning theory and instructional design, and provides the reader with the theoretical framework needed for design decision-making. It is helpful for the academic librarian who has responsibility for teaching students library skills.

For years scholars of biblical poetry have defined parallelism as the simple correspondence of one verse, phrase, or word with another. In this book, Adele Berlin approaches biblical parallelism as a linguistic phenomenon, as a complex interplay among all aspects of language. Her goal is to get at the basics of what biblical parallelism is and how it works. Berlin's examination of the grammatical, lexical, semantic, phonetic, structural, and psychological aspects of parallelism yields an elegantly simple model that reveals the complex workings of this phenomenon. Her book will be a valuable guide for both scholars and students of biblical poetry.

Growing out of a conviction that we need to provide older children with a greater understanding of their Christian heritage and the Bible, Dr. Edward Buchanan has authored two resources that are both educational and biblically sound. Parent/Teacher Handbook: Teaching Older Children Everything They Need to Know About the Bible, volume 3 uses a chronological Bible story approach, giving leaders and teachers the core content and information needed to teach children about the Bible. Parent/Teacher Handbook: Teaching Older Children Everything They Need to Know About Their Christian Heritage, volume 4 covers the basics of our Christian heritage and faith including Jewish traditions, missions, hymnody, art, science, and ethics.
