This is a multi-authored book concerning the perceived threat and recorded increase of emerging pests and vector-borne diseases affecting man and animals in Europe. Historically, Europe suffered from numerous pests and vector-borne diseases, including yellow fever, malaria, plague and typhus. Introduction of hygienic measures, drugs and vector control caused the disappearance of many of these diseases from Europe. In the (sub)tropics, however, many of these diseases still thrive, causing serious health problems for humans and animals. Increased trade, leading to animal and human movement and climate change cause reason to assume that several of these diseases might become re-established or allow 'new' diseases and pests to be introduced in Europe. The recent outbreaks of bluetongue virus in North-western Europe highlights this concern, requiring an effective surveillance systems for the early detection of pests and vector-borne diseases. In 24 chapters this book provides examples of the most likely pests and diseases affecting man and animals in Europe, with emphasis on ecological factors favouring these diseases and methods for prevention and intervention. The authors are recognized experts in specific fields. All chapters are peer reviewed.

Avian Influenza Virus The Pocket Daring Book for Girls

With the growing global fear of a major pandemic, avian influenza (AI) virus research has greatly increased in importance. In Avian Influenza Virus, an expert team of researchers and diagnosticians examine the fundamental, yet essential, virological methods for AI virus research and diagnostics as well as some of the newest molecular procedures currently used for basic and applied research. They present exciting, cutting-edge new methods that focus both on studying the virus itself and on work with avian hosts, an area greatly lacking in research.

Cotton is the most important textile and cash crop and is widely cultivated in more than 70 countries, including the United States, China, and India. Because its long life cycle and complicated genetic background, it is hard to improve cotton using traditional breeding techniques although it has made much progress in the last several decades. Currently, transgenic techniques have become a powerful tool to improve cotton and transgenic cotton is among the first commercially genetically modified crops. Transgenic Cotton: Methods and Protocols provides a comprehensive collection of methods for creating and monitoring transgenic cotton and its application on agricultural and basic research. Divided into five convenient sections, topics covered include the current status and perspectives of transgenic cotton, the principle and methods for making transgenic cotton, the methods for detecting foreign gene copy and expression in transgenic plants, the improvement of cotton using transgenic technology, and finally the methods for monitoring the potential impact of transgenic cotton on environment, including gene flow. Written in the successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, Transgenic Cotton: Methods and Protocols will serve as an excellent resource for scientists as well as graduate students who work on transgenic plants, plant genetics, molecular

biology and agricultural sciences. Manufacturing Facilities Design and Material Handling Pavilion

How many times can you jump rope? This rhyme makes the game of rope jumping even more fun. It's a counting rhyme, and there are lots of others like it. There are also red-hot pepper rhymes for jumping very fast, and rhymes for jumping in and out of the rope. There are even fortune-telling rhymes that answer questions and help you predict the future! The rhymes in this book began as a way to keep the rhythm while jumping rope, but they also lent poetry and humor to the game. Here are over one hundred traditional rhymes that will make rope jumping challenging and, best of all, fun.

Clearly structured throughout, the introduction highlights the different types of crime where these techniques are regularly used. This chapter includes a discussion as to who performs forensic wildlife examinations, the standardisation and validation of methods, and the role of the expert witness in this type of alleged crime. This is followed by a detailed section on the science behind DNA typing including the problems in isolating DNA from trace material and subsequent genetic analysis are also covered. The book then undertakes a comprehensive review of species testing using DNA, including a step-by-step guide to sequence comparisons. A comparison of the different markers used in species testing highlights the criteria for a genetic marker. A full set of case histories illustrates the use of the different markers used. The book details the use of genetic markers to link two or more hairs/feather/leaves/needles to the same individual organism and the software used in population assignment. The problems and possibilities in isolating markers, along with the construction of allele databases are discussed in this chapter. The book concludes with evaluation and reporting of genetic evidence in wildlife forensic science illustrated by examples of witness statements.

This book features selected papers presented at the First International Conference on Agriculture Digitalization and Organic Production (ADOP 2021), held in St. Petersburg, Russia, on June 07 – 09, 2021. The contributions, written by professionals, researchers and students, cover topics in the field of agriculture, biology, robotics, information technology and economics for solving urgent problems in digitalization of organic livestock and crop production. The conference is organized by the St. Petersburg Federal Research Center of the Russian Academy of Sciences (SPC RAS) and the Technische Universitat Kaiserslautern. The book will be useful to researchers of interdisciplinary issues of digitalization and robotization of agricultural production, as well as farmers and commercial companies, which introduce new technologies in crop production and animal husbandry. The book also covers a range of issues related to scientific training of graduate students in the areas of "Mechatronics and robotics", "Control in technical systems" and "Technologies, means mechanization and energy equipment in rural, forestry and fisheries" .

"Hilton Carter's love for plants is infectious... His lush and exuberant displays are inspiring reminders that plants can be so much more than neat little containers on a window sill." Grace Bonney, Founder and Editor-in-Chief, Design*Sponge Take a tour through Hilton 's own apartment and other lush spaces, filled with a huge array of thriving

plants, and learn all you need to know to create your own urban jungle. As the owner of over 200 plants, Hilton feels strongly about the role of plants in one 's home – not just for the beauty they add, but for health benefits as well: 'having plants in your home not only adds life, but changes the airflow throughout. It 's also a key design element when styling your place. For me, it wasn 't about just having greenery, but having the right variety of greenery. I like to see the different textures of foliage all grouped together. You take a fiddle leaf fig and sandwich it between a birds of paradise and a monstera and.... yes! ' You will be armed with the know-how you need to care for your plants, where to place them, how to propagate, how to find the right pot, and much more, and most importantly, how to arrange them so that they look their best. Combine sizes and leaf shapes to stunning effect, grow your own succulents from leaf cuttings, create your own air plant display, and more.

The many advances in psittacine medicine since the previous edition was published in 1996 are reflected in this Manual, which has been updated and rewritten under the direction of a new editorial partnership. The extended use of colour photographs adds to the extra usefulness of this successor to a well loved volume. Clinical examination is presented in a logical, highly practical way, with integrated photographs of key features. The chapter ends with notes on critical and emergency cases. The basic techniques of injection, crop tubing, microchipping, and wing, claw and beak clipping are described and illustrated. The role of clinical pathology is demonstrated, including colour images of haematology and cytology, and a step-by-step post-mortem examination procedure is presented. Diagnostic imaging encompasses radiography, ultrasonography and endoscopy, with views of both normal and abnormal presentations. Surgical principles plus procedures for both soft and hard tissues are then described. Subsequent chapters cover systemic illnesses and disease by individual organ system. These are designed to be read in their entirety or to be referred to as needed. For general practitioners the most commonly seen psittacine patients are small parrots, Cockateils and Budgerigars. A chapter is therefore devoted to dealing with common problems in these small patients. This practical approach to the sick bird is extended in an appendix of diagnostic algorithms for common presentations such as 'fluffing up', fitting and feather damage. The editors both developed their interests in avian medicine from general practice and this has resulted in a practical, easy-to-use and relevant guide to psittacine medicine.
