Raising Entrepreneurial Capital Law Journal Press
Raising Entrepreneurial Capital guides the reader through the stages of successfully financing a business. The book proceeds from a basic level of business knowledge, assuming that the reader understands simple financial statements, has selected a specific business, and knows how to write a business plan. It provides a broad summary of the subjects that people typically research, such as "How should your company position itself to attract private equity investment?" and "What steps can you take to improve your company's marketability?" Much has changed since the book was first published, and this second edition places effects of the global recession in the context of entrepreneurship,

including the debt vs. equity decision, the options available to smaller businesses, and the considerations that lead to rapid growth, including venture capital, IPOs, angels, and incubators. Unlike other books of the genre, *Raising Entrepreneurial Capital* includes several chapters on worldwide variations in forms and availability of pre-seed capital, incubators, and the business plans they create, with case studies from Europe, Latin America, and the Pacific Rim. Combines solid theory with a practitioner's experience and insights Case studies illustrate theory throughout the book Updated to reflect the realities of the global economic recession

The Government of Pakistan strongly supports public-private partnership (PPP) initiatives. From 1990 to 2019, Pakistan witnessed 108 financially closed PPP projects, with a total investment of approximately \$28.4 billion. About 88% of these projects are in the energy sector, attracting more than \$24.7billion,

followed by investments in the port sector. In early 2021, Parliament approved the amendments to the 2017 PPP Law, enacting the Public Private Partnership Authority (Amendment) Act 2021. This further strengthens the enabling legal and regulatory framework for developing and implementing PPPs, thereby promoting private sector investment in public infrastructure and related services.

Privatization of such services can include the outright sale of system assets, or various forms of public-private partnerships"from the simple provision of supplies and services, to private design construction and operation of treatment plants and distribution systems. Many factors are contributing to the growing interest in the privatization of water services. Higher operating costs, more stringent federal water quality and waste effluent standards, greater customer demands for quality and reliability, and an aging water delivery

and wastewater collection and treatment infrastructure are all challenging municipalities that may be short of funds or technical capabilities. For municipalities with limited capacities to meet these challenges, privatization can be a viable alternative. Privatization of Water Services evaluates the fiscal and policy implications of privatization, scenarios in which privatization works best, and the efficiencies that may be gained by contracting with private water utilities.
