Clinical Anatomy of the Eye has proved to be a very popular textbook for ophthalmologists and optometrists in training all over the world. The objective of the book is to provide the reader with the basic knowledge of anatomy necessary to practice ophthalmology. It is recognised that this medical speciality requires a detailed knowledge of the eyeball and the surrounding structures. The specialist's knowledge should include not only gross anatomic features and their development, but also the microscopic anatomy of the eyeball and the ocular appendages. The nerve and blood supply to the orbit, the autonomic innervation of the orbital structures, the visual pathway, and associated visual reflexes should receive great emphasis. The practical application of anatomic facts to ophthalmology has been emphasised throughout this book in the form of Clinical Notes in each chapter. Clinical problems requiring

anatomic knowledge for their solution are presented at the end of each chapter. Illustrations are kept simple and overview drawings of the distribution of the cranial and autonomic nerves have been included.

Valuing is central to acceptance and commitment therapy (ACT), yet few therapists truly understand how to engage clients in this complex process. Questions such as What is the purpose of my life? and How do I make decisions? are difficult to answer honestly for ourselves, let alone share with another person. The Art and Science of Valuing in Psychotherapy is the mental health practitioner's complete guide to helping clients identify their values and apply them to their lives in practical ways. You will also learn to establish your own values as a professional, which may shift from client to client, and act in accordance with these values in therapy. The book provides you with practical tools for conducting values work, including easy-to-understand metaphors, defusion exercises, guided imagery exercises, scripts for role play, client worksheets, assessment quizzes, and more. Once you've mastered the art and science of valuing, you'll find out just how broad the applications for values work can be for conceptualization and interventions in the workplace, in organizations, and on the community level, and discover how effective values work can be for tapping into your clients' capacity for change. [The Art and Science of Valuing in Psychotherapy] will illuminate how a focus on values can inform every aspect of psychotherapy, from case conceptualization to the therapeutic relationship. At once accessible and profound... highly recommended. -Steven C. Hayes, Ph.D., University of Nevada Foundation Professor of Psychology at the University of Nevada, Reno

A survey of probabilistic approaches to modeling and understanding brain function. Neurophysiological, neuroanatomical, and brain imaging studies have helped to shed light on how the brain transforms raw sensory information into a form that is useful for goal-directed behavior. A fundamental question that is seldom addressed by these studies, however, is why the brain uses the types of representations it does and what evolutionary advantage, if any, these representations confer. It is difficult to address such questions directly via animal experiments. A promising alternative is to use probabilistic principles such as

maximum likelihood and Bayesian inference to derive models of brain function. This book surveys some of the current probabilistic approaches to modeling and understanding brain function. Although most of the examples focus on vision, many of the models and techniques are applicable to other modalities as well. The book presents top-down computational models as well as bottom-up neurally motivated models of brain function. The topics covered include Bayesian and information-theoretic models of perception, probabilistic theories of neural coding and spike timing, computational models of lateral and cortico-cortical feedback connections, and the development of receptive field properties from natural signals.

A NEW YORK TIMES NOTABLE BOOK • The dramatic story of the Flint water crisis, by a relentless physician who stood up to power. "Stirring . . . [a] blueprint for all those who believe . . . that 'the world . . . should be full of people raising their voices.' " —The New York Times "Revealing, with the gripping intrigue of a Grisham thriller." —O: The Oprah Magazine Here is the inspiring story of how Dr. Mona Hanna-Attisha, alongside a team of researchers, parents, friends, and community leaders, discovered that the children of Flint, Michigan, were being exposed to lead in their tap water—and then battled her own government and a brutal backlash to expose that truth to the world. Paced like a scientific thriller, *What the Eyes Don't See* reveals how misguided austerity policies, broken democracy, and callous bureaucratic indifference placed an entire city at risk. And at the center of the story is Dr. Mona herself—an immigrant, doctor, scientist, and mother whose family's activist roots inspired her pursuit of justice. *What the Eyes Don't See* is a riveting account of a shameful disaster that became a tale of hope, the story of a city on the ropes that came together to fight for justice, self-determination, and the right to build a better world for their—and all of our—children. Praise for *What the Eyes Don't See* "It is one thing to point out a problem. It is another thing altogether to step up and work to fix it. Mona Hanna-Attisha is a true American hero." —Erin Brockovich "A clarion call to live a life of purpose." —The Washington Post "Gripping . . . entertaining . . . Her book has power precisely because she takes the events she recounts so personally. . . . Moral outrage present on every page." —The New York Times Book Review "Personal and emotional. . . She vividly describes the effects of lead poisoning on her young patients. . . . She is at her best when recounting the detective work she undertook after a tip-off about lead levels from a friend. . . . Flint will not be defined by this crisis," vows Ms. Hanna-Attisha. "Flint is a public health disaster. But it was Dr. Mona, this caring, tough pediatrician turned detective, who cracked the case." —Rachel Maddow
