Written by the man whose signature is on millions of exam certificates, Cheats, Choices & Dumbing Down lifts the lid on the UK's complex exams and qualifications system. Whether you're studying for exams, or are a parent, teacher, governor or administrator, this eye-opening book will be a valuable guide. It deals with the main qualifications in the UK, including GCSE, A Level, BTEC, the Diploma, International Baccalaureate, the English Baccalaureate and other vocational and professional qualifications. Read it to find out: How to achieve the best results Whether some subjects are easier than others The truth about 'dumbing down' and educational standards What examiners are looking for - and how they decide what grade to award Why millions of exam questions are marked by non-teachers How to claim an advantage and challenge grades How people cheat - and the consequences of getting caught What the future holds for exams and qualifications

How do we ensure that waste and inefficiency do not undermine the mission of publicly funded schools? Derek Neal writes that economists must analyze education policy in the same way they analyze other procurement problems. Insights from research on incentives and contracts in the private sector point to new approaches that could induce publicly funded educators to provide excellent education, even though taxpayers and parents cannot monitor what happens in the classroom. Information, Incentives, and Education Policy introduces readers to what economists know—and do not know—about the logjams created by misinformation and disincentives in education. Examining a range of policy agendas, from assessment-based accountability and centralized school assignments to charter schools and voucher systems, Neal demonstrates where these programs have been successful, where they have failed, and why. The details clearly matter: there is no quick-and-easy fix for education policy. By combining elements from various approaches, economists can help policy makers design optimal reforms. Information, Incentives, and Education Policy is organized to show readers how standard tools from economics research on information and incentives speak directly to some of the most crucial issues in education today. In addition to providing an overview of the pluses and minuses of particular programs, each chapter includes a series of exercises that allow students of

economics to work through the mathematics for themselves or with an instructor's assistance. For those who wish to master the models and tools that economists of education should use in their work, there is no better resource available.

The Shanghai school system has attracted worldwide attention since its impressive performance in the Programme for International Student Assessment (PISA) in 2009. The system ranks as a 'stunning success' according to standards of the Organisation for Economic Co-operation and Development (OECD). Shanghai also stands out for having the world's highest percentage of 'resilient students' – students from socio-economically disadvantaged backgrounds who emerge as top performers. Learning From Shanghai: Lessons on Educational Success offers a close-up view of the people and the policies that have achieved such world-class performance. Based on research and personal observation gathered during the author's recent field work with school principals, teachers and students, this book explores the factors that explain Shanghai's exceptional success in education. The approach combines high standards of scholarly research and analysis with the author's unique personal insights, as evidenced by chapters entitled Education is Filling a Bucket and Lighting a Fire and Tiger Mothers, Dragon Children. Drawing on her experience as an education professional and a teacher of teachers, Charlene Tan thoroughly examines and analyzes the people, the policies and the practices that distinguish Shanghai educators. The contents include comprehensive details on the Shanghai approach to quality education, from discussion of the balance between centralization and decentralization, to school autonomy and accountability, to testing policy and professional development for teachers. The book includes detailed tables on curriculum and school performance targets, sample appraisal forms for teachers and students, and dozens of photographs. The author is an Associate Professor at the National Institute of Education, Nanyang Technological University, Singapore.

[Proceedings of the 13th International Congress on Mathematical Education](#) Princeton University Press This volume explores the instructional use of creative writing in secondary and post-secondary contexts to enhance students' language proficiency and expression in English as a second or foreign language (ESL/EFL). Offering a diverse range of perspectives from scholars and practitioners involved in English language teaching (ELT) globally, International Perspectives on Creative Writing in Second Language Education tackles foundational questions around why fiction and creative writing have been traditionally omitted from ESL and EFL curricula. By drawing on empirical research and first-hand experience, contributors showcase a range of creative genres including autobiography, scriptwriting, poetry, and e-Portfolios, and provide new insight into the benefits of second language creative writing for learners' language proficiency, emotional expression, and identity development. The volume makes a unique contribution to the field of second language writing by highlighting the breadth of second language users throughout the world, and foregrounding links between identity, learning, and ESL/EFL writing. This insightful volume will be of particular interest to postgraduate students, researchers, and academics in the fields of ESL/EFL learning, composition studies, and second language acquisition (SLA). Those with a focus on the use of creative writing in classrooms more broadly, will also find the book of interest.

This book is open access under a CC BY 4.0 license. The book presents the Proceedings of the 13th International Congress on Mathematical Education (ICME-13) and is based on the presentations given at the 13th International Congress on Mathematical Education (ICME-13). ICME-13 took place from 24th- 31st July 2016 at the University of Hamburg in Hamburg (Germany). The congress was hosted by the Society of Didactics of Mathematics (Gesellschaft für Didaktik der Mathematik - GDM) and took place under the auspices of the International Commission on Mathematical Instruction (ICMI). ICME-13 brought together about 3.500 mathematics educators from 105 countries, additionally 250 teachers from German speaking countries met for

specific activities. Directly before the congress activities were offered for 450 Early Career Researchers. The proceedings give a comprehensive overview on the current state-of-the-art of the discussions on mathematics education and display the breadth and deepness of current research on mathematical teaching-and-learning processes. The book introduces the major activities of ICME-13, namely articles from the four plenary lecturers and two plenary panels, articles from the five ICMI awardees, reports from six national presentations, three reports from the thematic afternoon devoted to specific features of ICME-13. Furthermore, the proceedings contain descriptions of the 54 Topic Study Groups, which formed the heart of the congress and reports from 29 Discussion Groups and 31 Workshops. The additional important activities of ICME-13, namely papers from the invited lecturers, will be presented in the second volume of the proceedings.
