A hysteroscopy is a minimally invasive procedure used to examine the inside of the womb (uterus). It is performed using a hysteroscope – a narrow telescope with a light and camera at the end. Images are sent to a monitor to allow clinicians to see inside the womb. This book is a complete guide to the use of hysteroscopy in the investigation and diagnosis of gynaecological disorders and diseases. The second edition has been fully revised and updated and new topics added to provide clinicians with information on the latest advances and technologies in the field. Beginning with an introduction to the technique, discussion on anatomy and physiology of the uterus, and descriptions of other imaging technologies, the book then explains the hysteroscope and procedural techniques. Each of the following chapters covers the diagnosis of different disorders using hysteroscopy, including polyps and fibroids, abnormal bleeding, infertility,

intrauterine adhesions, and much more. The final sections discuss potential complications, medico-legal aspects and anaesthesia in hysteroscopy. Written by an experienced team of recognised editors and authors, this comprehensive guide is highly illustrated with clinical images and figures. A QR code inside the book provides access to operative videos demonstrating techniques. Previous edition (9789386150493) published in 2017. [Industrial Maintenance and Mechatronics](#) Wim Bervoets

This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and

interest, computers and microprocessors, circuit ideas and audio and hi-fi.

Paintings, magisterial and universal, that capture the essence of a vibrant African American community. In his art Jonathan Green paints the world of his childhood and an ode to a people imbued with a profound respect for the dignity and value of others—the Gullah people of the South Carolina barrier islands. His canvases, beloved for their sense of jubilation and rediscovery, evoke the meaning of community in Gullah society and display a reverence for the rich visual, oral, and spiritual traditions of its culture. His art also reveals a keen awareness of the interpersonal, social, and natural environments in which we live. The 180 images assembled in this collection showcase the meaning, purpose, and beauty that Green finds in the small but critical tasks of life. His work

elevates the everyday—preparing morning meals, doing the wash, accomplishing farming chores, finishing a day's work, relaxing in the evening—and celebrates the social and religious—community dances, baptisms, weddings, funerals. Green allows his audience the space and silence to observe people unobtrusively as they pursue life's mission of labor, love, and belonging and as they work in harmony with nature's mysterious, ever changing fabric. While Green's paintings speak specifically to his own upbringing, they transcend racial, cultural, and ethnic boundaries, thus allowing individuals of all backgrounds to recall fond memories and to reflect on the place that purpose and dignity hold in their lives. In addition to a foreword by Pat Conroy, essays by Bettye J. (Mbitha) Parker Smith, Lynn Robertson, and Ronne Hartfield complement Green's images. They tell of the vitality of the Gullah community, the progression of Green's career, and the authenticity of his work.
