Over the past decade, system-on-chip (SoC) designs have evolved to address the ever increasing complexity of applications, fueled by the era of digital convergence. Improvements in process technology have effectively shrunk board-level components so they can be integrated on a single chip. New on-chip communication architectures have been designed to support all inter-component communication in a SoC design. These communication architecture fabrics have a critical impact on the power consumption, performance, cost and design cycle time of modern SoC designs. As application complexity strains the communication backbone of SoC designs, academic and industrial R&D efforts and dollars are increasingly focused on communication architecture design. On-Chip Communication Architectures is a comprehensive reference on concepts, research and trends in on-chip communication architecture design. It will provide

readers with a comprehensive survey, not available elsewhere, of all current standards for on-chip communication architectures. A definitive guide to on-chip communication architectures, explaining key concepts, surveying research efforts and predicting future trends. Detailed analysis of all popular standards for on-chip communication architectures. Comprehensive survey of all research on communication architectures, covering a wide range of topics relevant to this area, spanning the past several years, and up to date with the most current research efforts. This workshop followed the First International Conference, which was hosted by Fermilab, on 26-28 October, 1994. That conference discussed the switch type event builder. Much intensive R&D work ensued from it, showing the importance of (1) data flow control and (2) high speed memory access on network adapters/drivers. Those two themes are involved in many networked data acquisition systems. Therefore, " Networked Data Acquisition Systems " was selected as the theme of DAQ 96. It includes a wide variety of data acquisition system presentations from present and near-future experiments at high energy and nuclear physics laboratories.
