One of the fundamental problems in education is that of applying skills and knowledge which learners have gained in one context to problems they encounter in another. This is particularly so in mathematics, where the problems encountered by learners in applying mathematical knowledge are well documented. Using and applying mathematics has been a central component of the National Curriculum in mathematics. However, the National Numeracy Strategy has adopted a new approach, in which 'using and applying' is integrated throughout the mathematics curriculum. This book aims to help teachers develop their understanding and practice in this crucial area. It is based on the

findings of a major research study, funded by the Nuffield Foundation, in which a group of primary teachers worked closely with the research team to develop their thinking and practice. The book provides a clear conceptual analysis of the problem of application, together with extensive examples of ways in which teachers can address it in their classrooms at Key Stages 1 and 2. A novel feature of the book is that it includes first-hand accounts of practice in Japanese classrooms, and outlines what teachers in the UK and elsewhere may learn from Japanese methods.

Cooperative Learning is a dynamic instructional model that can teach diverse content to students at different grade levels, with students working together in small, structured, heterogeneous groups to master subject content. It has a strong research tradition, is used frequently as a professional development tool in general education and is now emerging in physical education. This book defines Cooperative Learning in physical education and examines how

to implement Cooperative Learning in a variety of educational settings. It explores Cooperative Learning in physical education from three main perspectives. The first, context of learning, provides descriptions of Cooperative Learning in different levels of education (elementary school, secondary school, and university physical education). The second, Cooperative Learning in the curriculum, offers case studies from teachers and researchers of their experiences of implementing Cooperative Learning within their own national context. The third perspective, key aspects of Cooperative Learning, examines how the different elements of the model have been foregrounded in efforts to enhance learning in physical education. As the only text to provide international perspectives, from eight different countries, of Cooperative Learning in physical education, this book is important reading for any student, researcher or teacher with an interest in physical education, sport education, sport pedagogy, curriculum development or methods for learning and teaching.
