First published ten years ago, award-winning historian Ray Raphael's *Founding Myths* has since established itself as a landmark of historical myth-busting. With the author's trademark wit and flair, *Founding Myths* exposes the errors and inventions in America's most cherished tales, from Paul Revere's famous ride to Patrick Henry's "Liberty or Death" speech. For the seventy thousand readers who have been captivated by Raphael's eye-opening accounts, history has never been the same. In this revised tenth-anniversary edition, Raphael revisits the original myths and explores their further evolution over the past decade, uncovering new stories and peeling back additional layers of misinformation. This new edition also examines the highly politicized debates over America's past, as well as how school textbooks and popular histories often reinforce rather than correct historical mistakes. A book that "explores the truth behind the stories of the making of our nation" (National Public Radio), this revised edition of *Founding Myths* will be a welcome resource for anyone seeking to separate historical fact from fiction.

Building on comparative research in the U.K. and the U.S.A., this is the first book focused specifically on transgender experiences within policing. It examines the issues faced by the transgender community within policing and explores how gender, and the non-conformity of it, is perceived within police cultures. Moreover, it provides an on-going critique of the queer criminology movement and why it is crucial to policing studies, emphasising the specific importance of transgender issues therein. This empirical book provides qualitative data from American officers and English and Welsh constables on

transgender police. The following research questions are addressed: What are the perceptions of cisgender officers towards transgender officers, and what are the consequences of these perceptions? What are the occupational experiences and perceptions of officers who identify as transgender within policing? Finally, what are the reported positive and negative administrative issues that transgender individuals face within policing? The author concludes by discussing the empirical, theoretical and policy contributions of this research and offers some final thoughts on policy recommendations and directions for future research. A strong contribution to the literature in critical criminology and queer criminology, this book will also be of interest to those in the fields of gender studies, sociology, public administration, management studies and policing studies.

"Go into partnership with nature; she does more than half the work and asks none of the fee." - Martin H. Fisher. Nature has undertaken an immense amount of work throughout evolution. The evolutionary process has provided a power of information that can address key questions such as - Which immune molecules and pathways are conserved across species? Which molecules and pathways are exploited by pathogens to cause disease? What methods can be broadly used or readily adapted for wild immunology? How does co-infection and exposure to a dynamic environment affect immunity? Section 1 addresses these questions through an evolutionary approach. Laboratory mice have been instrumental in dissecting the nuances of the immune system. The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice. A better understanding of wild immunology is required and sets the scene for the subsequent papers. Although nature doesn't ask for a fee, it is appropriate that nature is repaid in one form or another. The translational theme of the second section incorporates papers that translate wild immunology back to nature. But any non-human, non-laboratory mouse research environment is hindered by a lack of research tools, hence the underlying theme throughout the second section. Physiological resource allocation is carefully balanced according to the most important needs of the body. Tissue homeostasis can involve trade-offs between energy requirements of the host and compensatory mechanisms to respond to infection. The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations. Technology has provided substantial advances in understanding the immune system at cellular and molecular levels. The specificity of these tools (e.g. monoclonal antibodies) often limits the study to a specific species or strain. A consequence of similar genetic sequences or cross-reactivity is that the technology can be adapted to wild species. Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species. This book evaluates Country of Origin (COO) research from new critical perspectives, providing insights on how COO shapes both consumer behaviour and business trends, and how marketers can overcome or take advantage of COO in their strategies. The contributors explore a variety of strategies for utilising Country of Origin, including how country image can influence market entry positioning strategies, and how brand heritage can be utilised as a communication tool. There is also a study of what percentage of online products require COO identification, and whether this percentage correlates to customer satisfaction. Several contributors look at consumers' preference for food in relation to COO and authenticity, and further chapters explore the impact of consumer identification with a nation on how they evaluate brands. As Country of Origin is increasingly evaluated by consumers and used by marketers to safeguard locally-owned products, this book will be of interest to those studying the relationship between country-authentic brands and their promotion in the global marketplace. This book was originally published as a special issue of the Journal of Promotion Management.
