[Concepts and Connections](#) Heinemann Educational Publishers *Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

[A Survival Guide for Research Scientists Pearson Education India](#) This color illustrated field and natural history guide treats all 107 known tiger beetle species found in North America above the Mexican border. Tiger beetles are among the most widely found and popular families of insects worldwide. Enabling amateur naturalists and professionals to use two identification methods--comparison of colored pictures to live or mounted specimens, and use of illustrated dichotomous keys--full biological accounts emphasize points for identification, behaviors, and habitats. Distribution maps show where various species and subspecies can be found. The authors promote a new and exciting activity of insect watching as an alternative or supplement to

collecting (the general feeling among "butterflies" and dragonfly and damselfly enthusiasts). Communicating primarily through the un-refereed journal *Cincindela*, (Tiger Beetle) specialists themselves prefer the term, "cicindelophiles." They represent an ardent subset of the growing number of serious amateur naturalists who invest in outdoor activities seeking and identifying birds, butterflies, dragonflies, flowering plants, and various other forms of life.

A main text for courses in action research or a supplement to courses in research methods in education A step-by-step guide to action research with a balanced coverage of qualitative and quantitative methods. Known for its practical, step-by-step guidance for teachers on how to do research in classrooms, Action Research: a Guide for the Teacher Researcher was born from the author's own experience working with teachers and principals. The author guides future educators through the action research process via numerous concrete illustrations; positioning it as a fundamental component of teaching, alongside curriculum development, assessment, and classroom management. From reviews of the book: “ Mills ’ writing style is informative, direct, and personalized and his expertise as a researcher is evident throughout the textbook. He fully understands the uniqueness of teacher-centered research. . . . The language and the illustration cater to the classroom research contexts and it is easy to understand and apply. ” – Adel Al-Bataineh, Illinois State University “ The book emphasizes the importance of reflection and creating an action plan. . . . Examples of action research papers are included. There are study sites, videos, slides and other supplemental materials available for the students to consult for ancillary learning. The writing style is clear, interesting and engaging. Throughout the text, Mills offers the reader a research scenario that helps to position him or her around the theme of the chapter and context of the research phase. This helps to alleviate some of the anxiety students of action research may experience as they begin each aspect of the action research process. ” – Beverly Melenzyer, California University of Pennsylvania “ [T]he survey examples, SurveyMonkey, and direct observation examples are very good, as well as the informal interview, making records, [and] data collection techniques. . . . [T]he section on re-aligning the focus and action research plan is very good. I find my students doing this as they are doing their literature review and understanding that they need to narrow the scope of their research. I like the example of doing AR in Ch. 6. . . . I like the inclusion of the data analysis, sample interview and other models of how to analyze data. . . . The key strengths of the project are the authentic examples of AR. ” – Mary Frances Agnello, Texas Tech University
